Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 September 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	28 July 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Main objective of the trial was to assess the effects of selexipag on right ventricle (RV) function in subjects with pulmonary arterial hypertension (PAH).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 July 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Korea, Republic of: 5
Country: Number of subjects enrolled	Malaysia: 1
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Singapore: 1
Worldwide total number of subjects	9
EEA total number of subjects	1

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	9

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 25 subjects were screened, out of which 9 subjects were enrolled and were treated with selexipag.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Selexipag
-----------	-----------

Arm description:

Subjects with PAH received a 200 micrograms (mcg) selexipag tablet orally on the evening of Day 1, followed by twice-daily dosing starting from Day 2. The dose of selexipag was increased by 200 mcg each week to allow each subject to reach their individual maximum dose (iMD), up to 1600 mcg twice daily, by the end of Week 12. From Week 13 onwards, subjects received their iMD of 1600 mcg selexipag tablets orally twice daily until Week 52. Subjects were then followed for safety up to 30 days after the last dose of selexipag.

Arm type	Experimental
Investigational medicinal product name	Selexipag
Investigational medicinal product code	
Other name	ACT-293987, JNJ-67896049
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received selexipag 200 mcg tablet orally on Day 1 in the evening then twice daily starting from Day 2. Dose of selexipag was up-titrated every week by 200 mcg to allow each subject to reach their iMD to 1,600 mcg twice daily orally by end of Week 12. Starting from Week 13, subjects received iMD of selexipag 1600 mcg tablet orally twice daily up to Week 52.

Number of subjects in period 1	Selexipag
Started	9
Completed	5

Primary: Change from Baseline to Week 26 in Right Ventricular Stroke Volume (RVSV) Assessed by Pulmonary Artery Flow Magnetic Resonance Imaging (MRI)

End point title	Change from Baseline to Week 26 in Right Ventricular Stroke Volume (RVSV) Assessed by Pulmonary Artery Flow Magnetic Resonance Imaging (MRI) ^[1]
-----------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Change from baseline to Week 26 in RVSV assessed by pulmonary artery flow MRI was reported. Safety analysis set included all subjects who received at least 1 dose of study intervention. Here, N (number of subjects analysed) signifies subjects evaluable for this endpoint and "n" signifies subjects evaluable for specified rows. As pre-specified in the statistical analysis plan (SAP), subject wise data was collected and reported due to very limited number of subjects enrolled.

End point type	Primary
----------------	---------

End point timeframe:

Baseline, Week 26

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be reported for this endpoint.

Secondary: Change from Baseline to Week 26 in Right Ventricular Ejection Fraction (RVEF) Assessed by MRI

End point title	Change from Baseline to Week 26 in Right Ventricular Ejection Fraction (RVEF) Assessed by MRI
-----------------	-----------------------------------------------------------------------------------------------

End point description:

Change from baseline to Week 26 in right ventricular ejection fraction (RVEF) assessed by MRI was reported. Right ventricular ejection fraction (RVEF) was the fraction of the end-diastolic volume (EDV) that is ejected out of right ventricle with each contraction. EDV is the volume of blood within a ventricle immediately before a contraction. Safety analysis set included all subjects who received at least 1 dose of study intervention. Here, N (number of subjects analysed) signifies subjects evaluable for this endpoint and "n" signifies subjects evaluable for specified rows. As pre-specified in the SAP, subject wise data was collected and reported due to very limited number of subjects enrolled.

Secondary: Number of Subjects With Change from Baseline to Week 26 in World Health Organization (WHO) Functional Class

End point title	Number of Subjects With Change from Baseline to Week 26 in World Health Organization (WHO) Functional Class
-----------------	-------------------------------------------------------------------------------------------------------------

End point description:

WHO functional classification for PAH ranged from Class I (no limitation in physical activity, ordinary physical activity does not cause undue dyspnea or fatigue, chest pain or near syncope), Class II (slight limitation of physical activity, ordinary physical activity cause undue dyspnea or fatigue, chest pain or near syncope), Class III (marked limitation of physical activity, less than ordinary activity cause undue dyspnea or fatigue, chest pain or near syncope) & Class IV (cannot perform a physical activity without any symptoms, dyspnea and/or fatigue may even be present at rest). Change from baseline in WHO functional class was classified into "Improved", "No change" and "Worsened". Improvement =reduction in functional class; worsened =increase in functional class; and no change = no change in functional class. Safety set included all subjects who received at least 1 dose of study intervention. Here, N (number of subjects analysed) signifies subjects evaluable for this endpoint.

Reporting groups

Reporting group title	Selexipag
-----------------------	-----------

Reporting group description:

Subjects with PAH received a 200 micrograms (mcg) selexipag tablet orally on the evening of Day 1, followed by twice-daily dosing starting from Day 2. The dose of selexipag was increased by 200 mcg each week to allow each subject to reach their individual maximum dose (iMD), up to 1600 mcg twice daily, by the end of Week 12. From Week 13 onwards, subjects received their iMD of 1600 mcg selexipag tablets orally twice daily until Week 52. Subjects were then followed for safety up to 30 days after the last dose of selexipag.

occurrences (all)	1		
Decreased Appetite			
subjects affected / exposed	1 / 9 (11.11%)		
occurrences (all)	1		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 January 2021	The overall reason for this protocol amendment was to provide clarification for several inclusion and exclusion criteria to better define the target population that may benefit from the study intervention, to add exploratory objectives and endpoints for long-term outcomes, to adapt to changed internal safety language and reporting processes, to align with TransCelerate template and to implement minor corrections and editorial revisions.
25 March 2022	Overall reasons for this protocol amendment was to clarify selected inclusion and exclusion criteria to better define the target population that might benefit from the study intervention and to clarify the definition of end of study (EOS) for the subjects continuing selezipag treatment in a continued access program.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
