Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 March 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 November 2021
Global end of trial reached?	Yes
Global end of trial date	10 November 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Evaluate the safety and efficacy of 3 different doses of EDP1815 for the treatment of psoriasis following daily dosing for 16 weeks.

Protection of trial subjects:

The study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki, ICH GCP, and all applicable country and local regulations. A written informed consent was obtained from each participant before entering the study or performing any nonroutine procedure. Each prospective participant or his or her legal guardian was given a full explanation of the study, was allowed to read the approved ICF, and had any questions answered.

Background therapy:

There wasn't any background therapy. All prior and concomitant medications were listed.

Evidence for comparator:

This was placebo-controlled study.

Actual start date of recruitment	21 September 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 23
Country: Number of subjects enrolled	Poland: 130
Country: Number of subjects enrolled	United Kingdom: 83
Country: Number of subjects enrolled	Hungary: 13
Worldwide total number of subjects	249
EEA total number of subjects	143

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	235
From 65 to 84 years	14
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects who met all of the inclusion and none of the exclusion criteria were enrolled into the study. A total of 249 subjects were randomly assigned in 1:1:1 ratio to one of the 3 parallel cohorts: Cohort 1: 0.8×10^{11} cells of EDP1815 or placebo; Cohort 2: 3.2×10^{11} cells of EDP1815 or placebo; Cohort 3: 8.0×10^{11} cells of EDP1815 or placebo

Pre-assignment

Screening details:

Study comprised a screening period of up to 4 weeks. Participants were allowed into the study if they were between the ages of 18 and 70 years (inclusive) with a documented diagnosis of mild to moderate plaque psoriasis for ≥ 6 months and agreed to follow contraceptive guidance.

Period 1

Period 1 title	Treatment period - Week 20 (Part A)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

This was a double-blind study.

Part A of the study comprised a screening period of up to 4 weeks, a baseline visit, a treatment period of 16 weeks (8 planned study site visits), and a follow-up visit at Week 20 (4 weeks after cessation of dosing).

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: EDP1815 1 Capsule

Arm description:

One capsule of EDP1815

Arm type	Experimental
Investigational medicinal product name	EDP1815 1 capsule
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

1 capsule EDP1815 self-administered orally once daily. EDP1815 PIC contained 0.8×10^{11} cells of *Prevotella histicola*. 56 subjects were treated with the EDP1815 versus 28 subject treated with placebo.

Arm title	Cohort 2: EDP1815 4 Capsules
------------------	------------------------------

Arm description:

Four capsules of EDP1815

Arm type	Experimental
Investigational medicinal product name	EDP1815 4 capsules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

4 capsules EDP1815 self-administered orally once daily. Total daily dose was 3.2×10^{11} cells of *Prevotella histicola*. 55 patients were treated with EDP1815 versus 27 were treated with placebo.

Arm title	Cohort 3: EDP1815 10 Capsules
------------------	-------------------------------

Arm description:	
Ten capsules of EDP1815	
Arm type	Experimental
Investigational medicinal product name	EDP1815 10 capsules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
10 capsules EDP1815 self-administered orally once daily. Total daily dose was 8.0×10^{11} cells of <i>Prevotella histicola</i> . 55 patients were treated with EDP1815 versus 28 treated with placebo.	
Arm title	Placebo

Arm description:	
EDP1815 matching placebo administered once daily as 1, 4 or 10 capsules.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

1, 4 or 10 capsules Placebo self-administered orally once daily. Placebo was identical in appearance to EDP1815 but did not contain *Prevotella histicola* or any other bacteria.

Number of subjects in period 1	Cohort 1: EDP1815 1 Capsule	Cohort 2: EDP1815 4 Capsules	Cohort 3: EDP1815 10 Capsules

Period 2

Period 2 title	Follow-up period - Week 40 (Part B)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

This was double-blind study.

Part B of the study was designed to assess the durability of treatment response and incidence of rebound of psoriasis following cessation of dosing with follow-up to Week 40 (24 weeks after cessation of dosing). Participants who completed Part A of the study without confirmation of treatment failure or rebound were permitted to enter Part B of the study.

No treatment was conducted during part B.

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: EDP1815 1 Capsule

Arm description:

One capsule of EDP1815 was administrated in Cohort 1.

Arm type	Experimental
Investigational medicinal product name	EDP1815 1 capsule
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Part A dosage and administration: 1 capsule EDP1815 self-administered orally once daily. EDP1815 PIC contained 0.8×10^{11} cells of *Prevotella histicola*.

Arm title	Cohort 2: EDP1815 4 Capsules
------------------	------------------------------

Arm description:

Four capsules of EDP1815 were administrated in Cohort 2.

Arm type	Experimental
Investigational medicinal product name	EDP1815 4 capsules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Part A dosage and administration: 4 capsules EDP1815 self-administered orally once daily. Total daily dose was 3.2×10^{10} cells of *Prevotella histicola*.

Arm title	Cohort 3: EDP1815 10 Capsules
Arm description: Ten capsules of EDP1815 were administrated in Cohort 3.	
Arm type	Experimental
Investigational medicinal product name	EDP1815 10 capsules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: Part A dosage and administration: 10 capsules EDP1815 self-administered orally once daily. Total daily dose was 8.0 x 10*10 cells of Prevotella histicola.	
Arm title	Placebo
Arm description: EDP1815 matching placebo administered once daily as 1, 4 or 10 capsules.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: Part A dosage and administration: 1, 4 or 10 capsules Placebo self-administered orally once daily. Placebo was identical in appearance to EDP1815 but did not contain Prevotella histicola or any other bacteria.	

Number of subjects in period 2^[1]	Cohort 1: EDP1815 1 Capsule	Cohort 2: EDP1815 4 Capsules	Cohort 3: EDP1815 10 Capsules
Started	23	31	29
Completed	22	25	25
Not completed	1	6	4
Consent withdrawn by subject	1	3	3
Other	-	1	-
Lost to follow-up	-	2	1

Number of subjects in period 2^[1]	Placebo
Started	41
Completed	37
Not completed	4
Consent withdrawn by subject	2
Other	1
Lost to follow-up	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 249 subjects started Treatment period (Part A), 186 subjects completed Part A and 124 subjects entered into Follow up period (Part B).

Subject analysis sets

Subject analysis set title	mITT set
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

The mITT set consisted of all participants who were randomized to treatment and who received at least 1 dose of study treatment. Participants who withdrew from the study before the end of Week 4 and were replaced were included in this analysis set. All analyses using the mITT grouped participants according to randomized treatment. The mITT set was the primary population of interest for the efficacy analyses.

Subject analysis set title	Safety set
Subject analysis set type	Safety analysis

Subject analysis set description:

The safety set consisted of all participants who received any study drug. All analyses using the safety set grouped participants according to treatment received. If participants received multiple treatments during the study, they were assigned to treatment group in the following manner:

- If a participant received both active EDP1815 and placebo treatments, they were assigned to the active treatment group.
- If a participant received 2 or more different active dose levels, they were assigned to the highest dose they received.

The safety set was used for all safety data presentations.

Statistical analyses

Statistical analysis title	Statistical Analysis - Cohort 1 vs Placebo
----------------------------	--

Statistical analysis description:

Performed using a Bayesian Mixed Model for Repeated Measures (MMRM) analysis with parameters for treatment*visit and baseline*visit and baseline BMI. Non-informative priors following a normal distribution with mean of 0 and a SD of 1000 were used for all parameters. After a burn-in of 10,000 samples, 100,000 MCMC samples were generated with a thin of 20 to leave 5000 retained samples for the analysis.

Comparison groups	Cohort 1: EDP1815 1 Capsule v Placebo
Number of subjects included in analysis	137
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.799 ^[2]
Method	Bayesian MMRM
Parameter estimate	Posterior mean
Point estimate	-5.99
Confidence interval	
level	95 %
sides	2-sided
lower limit	-20.28
upper limit	7.12

Notes:

[1] - All post-baseline visits were included in the model but only the Week 16 results are shown here. All four treatment groups were included into the same model and pairwise treatment differences between each active treatment group and the pooled placebo group were estimated using the posterior mean difference and 95% credible interval.

[2] - Posterior probability of superiority over placebo.

Secondary: Cumulative Incidence of Rebound in the mITT Population

End point title	Cumulative Incidence of Rebound in the mITT Population
-----------------	--

End point description:

Cumulative Incidence of Rebound has been measured on or before Week 20/Follow-up, at week 24 and

28 in the mITT Population. Rebound was the event of interest and was defined as an increase in PASI score to 125% of baseline value or above or onset of new pustular/erythrodermic psoriasis on or before the Week 28 visit.

End point type	Secondary
End point timeframe:	
On or before Week 20, at week 24 and 28	

End point values	Cohort 1: EDP1815 1 Capsule	Cohort 2: EDP1815 4 Capsules	Cohort 3: EDP1815 10 Capsules	Placebo

Adverse events

Adverse events information

Timeframe for reporting adverse events:

During the whole study period.

Adverse event reporting additional description:

TEAE is defined as an adverse event with onset date and time on or after the date and time of the first dose of study drug.

Assessment type	Systematic

Reporting groups

Reporting group title	Cohort 1: EDP1815 1 Capsule
-----------------------	-----------------------------

Reporting group description:

One capsule of EDP1815 was administrated in Cohort 1.

Reporting group title	Cohort 2: EDP1815 4 Capsules
-----------------------	------------------------------

Reporting group description:

Four capsules of EDP1815 were administrated in Cohort 2.

Reporting group title	Cohort 3: EDP1815 10 Capsules
-----------------------	-------------------------------

Reporting group description:

Ten capsules of EDP1815 were administrated in Cohort 3.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

EDP1815 matching placebo administered once daily as 1, 4 or 10 capsules.

Serious adverse events	Cohort 1: EDP1815 1 Capsule	Cohort 2: EDP1815 4 Capsules	Cohort 3: EDP1815 10 Capsules
Total subjects affected by serious adverse events

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 May 2020	The first participant was enrolled under Protocol Amendment 3, dated 26 May 2020.
17 November 2020	<p>The following is a summary of the major changes implemented with Protocol Amendment 4, dated 17 Nov 2020:</p> <ul style="list-style-type: none">• Local Amendment 3.1 (Hungary specific) was included.• Post-treatment follow-up was extended for a maximum of up to 6 months.• One secondary and 1 exploratory objective were added.• Definitions of response, relapse, and rebound based on PASI score were added.• Statistical analyses, endpoints, and supportive analyses were updated.• Skin plaque biopsy description was added.• Instructions for participants on withholding emollients or moisturizers were added.• 1,25-dihydroxy vitamin D3 and its analogs were removed from exclusion criterion #8.• Exclusion criterion #21 was clarified.• Pre- and probiotic use was clarified.• Allowed and prohibited vaccines were updated.• Eligibility confirmation at baseline/Visit 2 was clarified to be based on screening laboratory results.• The maximum allowed dose (overdose management) was clarified.• Clarification on data blinding was added.• "On the morning of the visit" ECGs and vital signs were changed to "on the day of the visit" in footnotes of the SoA.• The ideal size of lesion area for digital photography was updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
