Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 September 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 September 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary end points of the study are 1) to assess the efficacy of relacorilant based on blood pressure control at Week 22 compared with placebo, and 2) to assess the safety of relacorilant based on adverse events. Patients will be randomized in a 1:1 ratio to treatment with relacorilant (active drug) or placebo. Patients will receive relacorilant or placebo for 22 weeks. Patients who complete the study may also be eligible to roll over into an extension study.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Romania: 16
Country: Number of subjects enrolled	Spain: 13
Country: Number of subjects enrolled	Bulgaria: 1
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Italy: 20
Country: Number of subjects enrolled	Poland: 15
Country: Number of subjects enrolled	United States: 53
Country: Number of subjects enrolled	Israel: 9
Country: Number of subjects enrolled	Austria: 4
Worldwide total number of subjects	137
EEA total number of subjects	75

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	72
From 65 to 84 years	65
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 307 patients were screened, and 137 were enrolled.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Relacorilant
------------------	--------------

Arm description:

Patients will receive relacorilant increased sequentially from 100 mg once daily to a maximum dose of 400 mg once daily.

Arm type	Experimental
Investigational medicinal product name	Relacorilant
Investigational medicinal product code	
Other name	CORT125134
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Relacorilant is supplied as blister-packed capsules for oral dosing. Relacorilant 400 mg dose consists of 4 relacorilant 100-mg capsules. Relacorilant 100-mg, 200-mg, and 300-mg doses are each given as a combination of 4 capsules containing relacorilant 100-mg and placebo as per the assigned dose.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo is supplied as blister-packed capsules for oral dosing. Each dose consists of 4 capsules containing placebo.

Arm title	Placebo
------------------	---------

Arm description:

Patients will receive placebo matched to study drug once daily.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo is supplied as blister-packed capsules for oral dosing. Each dose consists of 4 capsules containing placebo.

Number of subjects in period 1	Relacorilant	Placebo
Started	68	69
Completed	43	61
Not completed	25	8
Adverse event, serious fatal	1	-
Consent withdrawn by subject	10	4
Physician decision	1	-
Adverse event, non-fatal	12	2
Subject does not want to continue with PI	-	1
Lost to follow-up	1	1

Reporting groups

Reporting group title	Relacorilant
Reporting group description:	
Patients will receive relacorilant increased sequentially from 100 mg once daily to a maximum dose of 400 mg once daily.	
Reporting group title	Placebo
Reporting group description:	
Patients will receive placebo matched to study drug once daily.	

Reporting group values	Relacorilant	Placebo	Total
Number of subjects	68	69	137
Age categorical			
Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	36	36	72
From 65-84 years	32	33	65
85 years and over	0	0	0
Age continuous			
Units: years			
arithmetic mean	62.5	63.0	
standard deviation	± 9.11	± 9.00	-
Gender categorical			
Units: Subjects			
Female	50	49	99
Male	18	20	38
Hypertension (HTN), Diabetes mellitus (DM), and impaired glucose tolerance (IGT) Status			
HTN without diabetes mellitus (DM) or impaired glucose intolerance (IGT). HTN is defined as average systolic blood pressure (SBP) ≥130 to ≤170 mm Hg based on 24-hour ambulatory blood pressure monitoring (ABPM). DM/IGT without HTN. DM is defined as fasting plasma glucose ≥126 mg/dL and/or 2-hour oral glucose tolerance test (oGTT) plasma glucose ≥200 mg/dL, or hemoglobin A1C (HbA1c) ≥6.5%. IGT is defined as plasma glucose ≥140 mg/dL and <200 mg/dL at 2 hours on the 2-hour oGTT.			
Units: Subjects			
HTN only	20	21	41
DM or IGT only	26	27	53
HTN and DM/IGT	22	21	43

Statistical analyses

Statistical analysis title	Difference in Change in Average 24-hour SBP
Statistical analysis description:	
The primary analysis will determine whether there is a difference between treatment groups in terms of change from Baseline to Week 22 in 24-hour average SBP. This was performed using a linear mixed-model-for-repeated-measures (MMRM) analysis using a placebo wash-out multiple imputation for treatment discontinuation and for patients that use rescue medication.	
Comparison groups	Relacorilant v Placebo
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	equivalence
P-value	= 0.416
Method	Mixed models analysis
Parameter estimate	Mean difference (final values)
Point estimate	-2.67

Confidence interval	
level	95 %
sides	2-sided
lower limit	-9.096
upper limit	3.766

Primary: Number of Patients With 1 or More Treatment-emergent Adverse Events (TEAEs) as Graded by CTCAE v5.0.

End point title	Number of Patients With 1 or More Treatment-emergent Adverse Events (TEAEs) as Graded by CTCAE v5.0. ^[1]
-----------------	---

End point description:

The analysis population was patients in the Safety Population which included all randomized patients who received at least 1 dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Baseline and up to Week 26

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No between-group statistical analysis was planned or conducted for this end point.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 August 2021	1. Revised the conditions under which dose escalation based on tolerability and improvement in hyperglycemia and/or hypertension will occur. 2. Provided conditions for study procedures due to COVID-19 restrictions. 3. Secondary end points for patients with systolic hypertension were added. 4. Exploratory efficacy end points of insulin resistance indices and hyperglucagonemia were added. 5. Added exclusion criteria to exclude candidates who have DM Type 1 or require inhaled glucocorticoid use and have no alternative option or have a history of cyclic Cushing syndrome with fluctuating clinical manifestations or have used mitotane prior to Baseline.
21 June 2023	1. Food effects study data was updated. 2. Secondary and exploratory objectives and end points were revised. 3. Assessment of PK was moved from a secondary to exploratory objective to align with the unchanged placement of PK as an exploratory end point. 4. Reference to mean SBP was revised to average SBP based on 24-hour ABPM for clarity, including primary and secondary end points and inclusion criterion #5 and exclusion criterion #1. 5. Reference to mean DBP was revised to average DBP based on 24-hour ABPM for clarity, including secondary end points and exclusion criterion #1. 6. Removed assessment of clinical benefit as a determinant for inclusion in the extension study. Investigators cannot be expected to assess clinical benefit while blinded. 7. Added unit for glomerular filtration rate to exclusion criterion #5, which was inadvertently omitted and updated section number for exclusion criterion #18. 8. Typo for dose escalation was corrected ("AND" to "OR"). 9. Conditions for use of rescue antidiabetic and antihypertensive concomitant medications were revised for accuracy. 9. Conditions for use of rescue antidiabetic and antihypertensive concomitant medication were revised. 10. Visit windows were revised for clarity, and procedures for visit assessments during dose escalation and maintenance phase were added. 11. Procedures for collection, documentation, and reporting of AEs and SAEs were revised for clarity. 12. The statistical section was revised for alignment with the statistical analysis plan, including analysis of primary, secondary, and exploratory end points.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

One protocol amendment occurred after the end of trial date and included updates to primary and secondary end points and statistical analyses. This amendment is not included in the Substantial Protocol Amendments (Globally).

Notes:
