Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	28 September 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 September 2022
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to evaluate the efficacy, safety, and pharmacokinetics of atezolizumab when given in combination with cabozantinib (Atezo + Cabo) compared with docetaxel monotherapy in subjects with metastatic non-small cell lung cancer (NSCLC), with no sensitizing endothelial growth factor receptor (EGFR) mutation or anaplastic lymphoma kinase (ALK) translocation, who have progressed on prior treatment with both anti-PD-L1/PD-1 antibody and platinum-containing chemotherapy.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 October 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	178
From 65 to 84 years	187
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Participants are enrolled in the study at study centers in 15 countries. The study is ongoing.

Pre-assignment

Screening details:

Of the 366 participants, 180 participants were randomized to receive Docetaxel monotherapy whereas 186 participants were randomized to receive Atezolizumab and Cabozantinib combination therapy.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Docetaxel

Arm description:

Participants received docetaxel intravenously at a starting dose of 75mg/m² on Day 1 of each 21-day cycle.

Arm type	Active comparator
Investigational medicinal product name	Docetaxel
Investigational medicinal product code	RO0647746
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel was administered on Day 1 of each 21-day cycle.

Arm title	Atezolizumab + Cabozantinib
------------------	-----------------------------

Arm description:

Participants received atezolizumab intravenously at a fixed dose of 1200 mg on Day 1 of each 21-day cycle. Cabozantinib was administered orally, once daily at a dose of 40 mg in each 21-day cycle.

Arm type	Experimental
Investigational medicinal product name	Cabozantinib
Investigational medicinal product code	RO7047650
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cabozantinib was administered orally, once daily at a dose of 40 mg in each 21-day cycle.

Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	RO5541267
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received 1200 mg atezolizumab on Day 1 of each 21-day cycle

Number of subjects in period 1	Docetaxel	Atezolizumab + Cabozantinib

Primary: Overall Survival (OS)

End point title	Overall Survival (OS)
End point description: OS was defined as time from randomization to death from any cause. Participants alive at time of analysis were censored at date when they were last known to be alive as documented by investigator. Kaplan-Meier method was used to estimate median. 95% CI for median was computed using method of Brookmeyer and Crowley. Intent-to-treat (ITT) population included all randomised participants, whether or not the participant received the assigned treatment.

Secondary: Progression-Free Survival (PFS) as Determined by Investigator

End point title	Progression-Free Survival (PFS) as Determined by Investigator
-----------------	---

End point description:

PFS was defined as time from randomisation to first occurrence of disease progression, as determined by investigator according to RECIST v1.1, or death from any cause (whichever occurred first). Progressive disease(PD) was defined as at least 20% increase in sum of longest diameters(D) of target lesions, taking as reference smallest sum of longest D of target lesions recorded since treatment started, including screening, or appearance of 1 or more new lesions. Participants who were alive & did not experience disease progression at time of analysis, were censored on date of last tumor assessment. Participants with no post-baseline tumor assessment were censored at date of randomisation.ITT population included all randomised participants, whether or not participant received the assigned treatment.

The pharmacokinetic (PK)-evaluable population included all participants who received any dose of atezolizumab or cabozantinib and who had evaluable PK samples. Overall number analyzed is the number of participants with data available for analysis. Number analysed is the number of participants with data available for analysis at the specified timepoints. 9999= the data was not evaluable as all samples were Below Limit of Quantitation (BLQ)	
End point type	Secondary
End point timeframe:	
Predose on Day 1 of Cycles 1, 2, 3, 4, 8, 12 and 16 (each cycle is 21 days)	

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Pharmacokinetics was analyzed for Atezolizumab only for this endpoint.

End point values	Atezolizumab + Cabozantinib			
Subject group type	Reporting group			
Number of subjects analysed	185			
Units: microgram/milliliter (µg/ml)				
geometric mean (geometric coefficient of variation)				
Cycle 1 Day 1 (n=146)	9999 (± 9999)			
Cycle 2 Day 1 (n=162)	96.8 (± 48.1)			
Cycle 3 Day 1 (n=140)	124 (± 104.4)			
Cycle 4 Day 1 (n=130)	167 (± 47.7)			
Cycle 8 Day 1 (n=70)	194 (± 62.4)			
Cycle 12 Day 1 (n=52)	233 (± 44.7)			
Cycle 16 Day 1 (n=40)	209 (± 56.1)

Secondary: Percentage of Participants With Adverse Events

End point title	Percentage of Participants With Adverse Events
End point description:	
An adverse event is any untoward medical occurrence in a clinical investigation patient administered a pharmaceutical product, regardless of causal attribution. AEs were assessed using National Cancer Institute Common Terminology Criteria for Adverse Events, version 5.0 (NCI CTCAE, v5.0). Safety population included treated participants, defined as all randomised participants who received any amount of study drug.	
End point type	Secondary
End point timeframe:	
From signing the informed consent form up to the study completion date: 28 February 2024 (i.e., approximately 41 months)	

End point values	Docetaxel	Atezolizumab + Cabozantinib

Reporting groups

Reporting group title	Atezolizumab + Cabozantinib
-----------------------	-----------------------------

Reporting group description:

Participants received atezolizumab intravenously at a fixed dose of 1200 mg on Day 1 of each 21-day cycle. Cabozantinib was administered orally, once daily at a dose of 40 mg in each 21-day cycle.

Reporting group title	Docetaxel
-----------------------	-----------

Reporting group description:

Participants received docetaxel intravenously at a starting dose of 75mg/m² on Day 1 of each 21-day cycle.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 March 2023	Protocol GO41892, Version 5: has been amended primarily to update the adverse event management guidelines to align with the recent Atezolizumab Investigator's Brochure, Version 19, and Cabozantinib Investigator’s Brochure, Version 18.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
