

Clinical trial results:

A Multi-center, Randomized, Double-blind, Placebo-controlled, Parallel Group, Phase 2 Study to Evaluate Clinical Efficacy and Safety of Deucravacitinib (BMS-986165) in Participants with Alopecia Areata

Summary

EudraCT number	2020-000113-33
Trial protocol	FR
Global end of trial date	16 May 2024

Results information

Result version number	v1 (current)
This version publication date	30 May 2025
First version publication date	30 May 2025

Trial information

Trial identification

Sponsor protocol code	IM011-134
-----------------------	-----------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Sponsors

Sponsor organisation name	Bristol-Myers Squibb
Sponsor organisation address	Chaussée de la Hulpe 185, Brussels, Belgium, 1170
Public contact	Global Submission Management, Clinical Trials, Bristol-Myers Squibb International Corporation, mg-gsm-ct@bms.com
Scientific contact	Bristol-Myers Squibb Study Director, Bristol-Myers Squibb, mg-gsm-ct@bms.com

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 June 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	16 May 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Change from baseline in SALT score at Week 24

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 November 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 35
Country: Number of subjects enrolled	France: 16
Country: Number of subjects enrolled	Japan: 12
Country: Number of subjects enrolled	Poland: 8
Country: Number of subjects enrolled	United States: 19
Country: Number of subjects enrolled	Australia: 4
Worldwide total number of subjects	94
EEA total number of subjects	24

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	93
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study was terminated due to change in business objectives.

Pre-assignment

Screening details:

94 participants randomized and treated in Placebo controlled period. the 31 participants in the placebo cohort, were re-randomized into the active treatment period (ATP) cohort.

Period 1

Period 1 title	Placebo-Controlled (Day 1 to Week 24)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Deucravacitinib 6 mg QD
------------------	-------------------------

Arm description:

Participants with alopecia areata received deucravacitinib 6 mg tablet orally once daily (QD) from Day 1 to Week 24 in Placebo-controlled Period.

Arm type	Experimental
Investigational medicinal product name	Deucravacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

6 mg QD

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo

Arm title	Deucravacitinib 6 mg BID
------------------	--------------------------

Arm description:

Participants with alopecia areata received deucravacitinib 6 mg tablet orally twice daily (BID) from Day 1 to Week 24 in Placebo-controlled Period.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo

Investigational medicinal product name	Deucravacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 6 mg BID	
Arm title	Placebo

Arm description:

Participants with alopecia areata received placebo tablet orally twice daily (BID) from Day 1 to Week 24 in Placebo-controlled Period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo

Number of subjects in period 1	Deucravacitinib 6 mg QD	Deucravacitinib 6 mg BID	Placebo
Started	32	31	31
Completed	32	26	31
Not completed	0	5	0
Consent withdrawn by subject	-	1	-
Adverse event, non-fatal	-	2	-
Participant request to discontinue study treatment	-	2	-

Period 2

Period 2 title	Active Treatment (Week 25 to Week 52)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Deucravacitinib 6 mg QD

Primary: Change from Baseline in Severity of Alopecia Tool Score at Week 24 in Placebo-Controlled Treatment Period

End point title	Change from Baseline in Severity of Alopecia Tool Score at Week 24 in Placebo-Controlled Treatment Period ^[1]
-----------------	--

End point description:

The Severity of Alopecia Tool (SALT) score is a quantitative rating scale for measuring the severity of alopecia areata based on the amount of terminal hair loss in each of the 4 quadrants of the scalp: back region, top region, left and right regions of the scalp. To calculate a SALT score, the degree of scalp hair loss, as a percentage of each scalp region affected, is determined. Each region is multiplied by its respective weighting factor (percentage surface area of the scalp in that area; back region [24%], top region [40%], left region [18%] and, right region [18%]), in order to achieve a subtotal for each region. The SALT score is the sum of the scalp hair loss in each area (sum of the subtotals). The score ranges from 0 to 100, the higher score reflects high severity of alopecia areata.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day 1) and Week 24

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: no further statistical analysis done for this endpoint

Primary: Number of Participants with Treatment Emergent Adverse Events in Placebo-Controlled Period

End point title	Number of Participants with Treatment Emergent Adverse Events in Placebo-Controlled Period ^[2]
-----------------	---

End point description:

An Adverse Event (AE) is defined as any new untoward medical occurrence or worsening of a pre-existing medical condition in a clinical investigation participant administered study treatment and that does not necessarily have a causal relationship with this treatment. Serious Adverse Event (SAE) is defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires inpatient hospitalization or causes prolongation of existing hospitalization. Adverse event of interest included herpes zoster, malignancy, opportunistic infection or tuberculosis infection.

Interest-Malignancy-Nodular lymphocyte predominant Hodgkin Lymphoma = IMN-HL

End point type	Primary

Secondary: Percentage of Participants Achieving a $\geq 50\%$ Reduction in Severity of Alopecia Tool (SALT) score (SALT50 response) from Baseline at Week 24

End point title	Percentage of Participants Achieving a $\geq 50\%$ Reduction in Severity of Alopecia Tool (SALT) score (SALT50 response) from Baseline at Week 24 ^[15]
-----------------	---

End point description:

The Severity of Alopecia Tool (SALT) score is a quantitative rating scale for measuring the severity of alopecia areata based on the amount of terminal hair loss in each of the 4 quadrants of the scalp; back region, top region, left and right regions of the scalp. To calculate a SALT score, the degree of scalp hair loss, as a percentage of each scalp region affected, is determined. Each region is multiplied by its respective weighting factor (percentage surface area of the scalp in that area; Back region [24%], Left Region [18%], Right Region [18%], Top Region [40%]), in order to achieve a subtotal for each region. The SALT score is the sum of the scalp hair loss in each area (sum of the subtotals). The score ranges from 0 to 100, the higher score reflects high severity of alopecia areata. SALT50 response indicates at least a 50% improvement from baseline in the SALT score at a particular time point, indicating 50% hair regrowth.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality: Week 0 to 52. Serious AEs were collected from ICF signing to 30 days post last dose (up to 32 weeks and 28 weeks) in both periods. Non-serious AEs were collected from Day 1 to 30 days post last dose (up to 28 weeks for both periods).

Adverse event reporting additional description:

Safety population included all participants who were in the randomized population and received at least 1 dose of study intervention.

ATP = Active Treatment Period

PBO = Placebo

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 August 2023	<p>The primary purpose of this amendment is to incorporate changes based on comments received from United States Food and Drug Administration (US FDA) as well as to add clarifications based on feedback from study investigators.</p> <p>Language from the Japan-specific Amendment 01, related to the interpretation of hepatitis B virus test results to assess eligibility and to clarify expectations for assessments and sample collections, has been incorporated into this global amendment.</p> <p>Other edits were incorporated throughout the protocol to correct minor errors, add clarity, and improve consistency. Key changes are summarized below.</p> <p>This protocol amendment applies to all participants.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
