

## Clinical trial results:

### A Phase 4, Multicenter Study to Evaluate Discontinuation and Re-Treatment in Subjects With Tenosynovial Giant Cell Tumor (TGCT) Previously Treated With Pexidartinib

#### Summary

EudraCT number	2020-000192-20
Trial protocol	HU NL IT
Global end of trial date	07 July 2023

#### Results information

Result version number	v1 (current)
This version publication date	27 October 2024
First version publication date	27 October 2024

#### Trial information

##### Trial identification

Sponsor protocol code	PL3397-A-U4003
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04526704
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 July 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 July 2023
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the trial was to determine the proportion of patients who remained treatment-free. Secondary objectives in the Treatment-free Period was change from baseline in PROs and safety and in the Re-Treatment Period it was change from baseline in PROs, tumor assessment , and safety.

Protection of trial subjects:

The study was conducted in compliance with ethical principles that have their origin in the Declarations of Helsinki and in accordance with guidelines. The study protocol, amendments, the informed consent/assent form(s), and information sheets were approved by the appropriate and applicable Independent Ethics Committees (IECs) or Institutional Review Boards (IRBs).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 October 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Hungary: 2
Country: Number of subjects enrolled	Australia: 3
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Taiwan: 2
Country: Number of subjects enrolled	United States: 11
Worldwide total number of subjects	32
EEA total number of subjects	16

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	28
From 65 to 84 years	4
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 32 participants who met all inclusion criteria and no exclusion criteria were enrolled in the study.

### Pre-assignment

Screening details:

As specified in the protocol, the study analysis was conducted based on 2 cohorts: Treatment Continuation Cohort and Treatment-Free/Re-Treatment Cohort. Patient disposition, efficacy and safety endpoints were assessed based on these 2 cohorts, not according to the sequential nature of the arm/group assignment.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	Treatment Continuation Cohort

Arm description:

Previously-treated participants with TGCT who continued their current dose of pexidartinib treatment.

Arm type	Experimental
Investigational medicinal product name	Pexidartinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg capsules administered orally twice daily on an empty stomach (at least 1 hour before or at least 2 hours after a meal or snack)

<b>Arm title</b>	Treatment-Free/Re-Treatment Cohort
------------------	------------------------------------

Arm description:

Previously-treated participants with TGCT who discontinued pexidartinib treatment (Treatment-Free Period) and had the option to resume pexidartinib treatment at dose of completion of prior study (Re-Treatment Period).

Arm type	Experimental
Investigational medicinal product name	Pexidartinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg capsules administered orally twice daily on an empty stomach (at least 1 hour before or at least 2 hours after a meal or snack)

<b>Number of subjects in period 1</b>	Treatment Continuation Cohort	Treatment-Free/Re-Treatment Cohort
Started	21	11
Completed	17	11
Not completed	4	0
Consent withdrawn by subject	2	-
Physician decision	1	-
Adverse event, non-fatal	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	Treatment Continuation Cohort
Reporting group description:	
Previously-treated participants with TGCT who continued their current dose of pexidartinib treatment.	
Reporting group title	Treatment-Free/Re-Treatment Cohort
Reporting group description:	
Previously-treated participants with TGCT who discontinued pexidartinib treatment (Treatment-Free Period) and had the option to resume pexidartinib treatment at dose of completion of prior study (Re-Treatment Period).	

Reporting group values	Treatment Continuation Cohort	Treatment-Free/Re-Treatment Cohort	Total
Number of subjects	21	11	32
Age categorical			
Units: participants			
18 to 40 years	7	1	8

## End points

### End points reporting groups

Reporting group title	Treatment Continuation Cohort
Reporting group description:	
Previously-treated participants with TGCT who continued their current dose of pexidartinib treatment.	
Reporting group title	Treatment-Free/Re-Treatment Cohort
Reporting group description:	
Previously-treated participants with TGCT who discontinued pexidartinib treatment (Treatment-Free Period) and had the option to resume pexidartinib treatment at dose of completion of prior study (Re-Treatment Period).	

### Primary: Number of Treatment-Free Participants at 12 Months In The Treatment-free/Re-treatment Cohort

End point title	Number of Treatment-Free Participants at 12 Months In The Treatment-free/Re-treatment Cohort <sup>[1][2]</sup>
End point description:	
Participants who were not remaining treatment-free were defined as either participants who resumed pexidartinib treatment, death (any cause) or who were receiving systemic therapy or undergoing surgery for the treatment of TGCT, whichever occurs first. The number of participants who remained treatment-free at Month 12 is reported.	
End point type	Primary
End point timeframe:	
Baseline up to 12 months after last participant enrolled in Cohort	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics were used to assess this outcome.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Descriptive statistics were used to assess this outcome.

End point values	Treatment-Free/Re-Treatment Cohort			
Subject group type	Reporting group			
Number of subjects analysed	11			
Units: participants	8			

### Statistical analyses

No statistical analyses for this end point

### Primary: Number of Treatment-Free Participants at 24 Months In The Treatment-free/Re-treatment Cohort

End point title	Number of Treatment-Free Participants at 24 Months In The Treatment-free/Re-treatment Cohort <sup>[3][4]</sup>
End point description:	
Participants who were not remaining treatment-free were defined as either participants who resumed	

peixidartinib treatment, death (any cause) or who were receiving systemic therapy or undergoing surgery for the treatment of TGCT, whichever occurs first. The number of participants who remained treatment-free at Month 24 is reported.

End point type	Primary
End point timeframe:	
Baseline up to 24 months after last participant enrolled in Cohort	

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics were used to assess this outcome.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Descriptive statistics were used to assess this outcome.

End point values	Treatment-Free/Re-Treatment Cohort			
Subject group type	Reporting group			
Number of subjects analysed	11			
Units: participants	8			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Change From Baseline in PROMIS Physical Function Total Overall Score In The Treatment Continuation and Treatment-free/Re-Treatment Cohorts

End point title	Change From Baseline in PROMIS Physical Function Total Overall Score In The Treatment Continuation and Treatment-free/Re-Treatment Cohorts
-----------------	--

End point description:

The PROMIS Physical Function Total Overall Score (includes 11 upper extremity questions and 13 lower extremity questions) ranges from 24 to 120, with each individual question being rated on a 5-point rating scale (where 1 is unable to do and 5 is without any difficulty). Higher PROMIS Physical Function Total Overall Scores indicate a better health state. The change from baseline in PROMIS Physical Function Total Overall Scores is being reported.

End point type	Secondary
End point timeframe:	
Baseline up to Month 24	

End point values	Treatment Continuation Cohort	Treatment-Free/Re-Treatment Cohort		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	16	7		
Units: score on a scale				
arithmetic mean (standard deviation)	-2.78 (± 6.42)	-1.93 (± 4.80)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Change From Baseline in EQ-5D-5L Scale Score In The Treatment Continuation and Treatment-free/Re-Treatment Cohorts

End point title	Change From Baseline in EQ-5D-5L Scale Score In The Treatment Continuation and Treatment-free/Re-Treatment Cohorts
-----------------	--

End point description:

The EQ-5D-5L questionnaire assessed a participant's mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. The overall health is rated on a scale from 0 to 100, where 0 is worst health you can imagine and 100 is best health you can imagine. The change from baseline in EQ-5D-5L Scale Score is being reported.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to Month 24

End point values	Treatment Continuation Cohort	Treatment-Free/Re-Treatment Cohort		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	16	7		
Units: score on a scale				
arithmetic mean (standard deviation)	-2.4 ( $\pm$ 13.53)	3.4 ( $\pm$ 7.59)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Participants Who Reported Treatment-Emergent Adverse Events (TEAEs) In The Treatment Continuation Cohort

End point title	Number of Participants Who Reported Treatment-Emergent Adverse Events (TEAEs) In The Treatment Continuation Cohort <sup>[5]</sup>
-----------------	---

End point description:

Treatment-emergent adverse events (TEAEs) were defined as new adverse events (AEs) or pre-existing conditions that worsen in CTCAE grade after the first dose of study drug and up to 30 days after last dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to 30 days after the start of re-treatment or end of study (whichever occurs first), up to 24 months

Notes:

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.  
Justification: Descriptive statistics were used to assess this outcome.

End point values	Treatment Continuation Cohort			
Subject group type	Reporting group			
Number of subjects analysed	21			
Units: participants				
TEAE	19			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Participants With and Without Progressive Disease

End point title	Number of Participants With and Without Progressive Disease
-----------------	---

End point description:

Tumors were assessed based on the RECIST criteria. CR was defined as a disappearance of all target lesions, PR was defined as at least a 30% decrease in the sum of diameters of target lesions, and stable disease (SD) was defined as neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for progressive disease (PD;  $\geq 30\%$  increase in volume relative to lowest score during the study whether at baseline or some other visit).

End point type	Secondary
----------------	-----------

End point timeframe:

Month 18 (Re-treatment Period of the Treatment-free/Re-treatment Cohort), Month 24 (Treatment Continuation Cohort)

End point values	Treatment Continuation Cohort	Treatment-Free/Re-Treatment Cohort		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	16	3		
Units: participants				
Not progressive	16	0		
Progressive disease	0	1		
Not evaluable	0	0		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Participants Who Reported Treatment-Emergent Adverse Events (TEAEs) In The Re-Treatment Period of the Treatment-free/Re-Treatment

## Cohort

End point title	Number of Participants Who Reported Treatment-Emergent Adverse Events (TEAEs) In The Re-Treatment Period of the Treatment-free/Re-Treatment Cohort <sup>[6]</sup>
-----------------	---

End point description:

Treatment-emergent adverse events (TEAEs) were defined as new adverse events (AEs) or pre-existing conditions that worsen in CTCAE grade after the first dose of study drug and up to 30 days after last dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to 30 days after the start of re-treatment or end of study (whichever occurs first), up to 24 months

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Descriptive statistics were used to assess this outcome.

<b>End point values</b>	Treatment-Free/Re-Treatment Cohort			
Subject group type	Reporting group			
Number of subjects analysed	3			
Units: participants				
TEAE	3			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Patients Reporting AEs (Treatment-free)

End point title	Number of Patients Reporting AEs (Treatment-free) <sup>[7]</sup>
-----------------	--

End point description:

Adverse events (AEs) were defined as any untoward medical occurrence in a participant who was administered a pharmaceutical product and that does not necessarily have to have a causal relationship with this treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to 30 days after the start of re-treatment or end of study (whichever occurs first), up to 24 months

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Descriptive statistics were used to assess this outcome.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events were collected from baseline up to 30 days after the start of re-treatment or end of study (whichever occurs first), up to 24 months.

Adverse event reporting additional description:

TEAEs observed in the Treatment Continuation Cohort and the Re-Treatment Period of the Treatment-free/Re-Treatment Cohort are reported. AEs from the Treatment-free Period of the Treatment-free/Re-Treatment Cohort were captured and are reported as well.

Assessment type	Systematic
