

Clinical trial results:

A Phase 1 Placebo-Controlled, Double-Blind, Multicenter Study to Evaluate the Safety, Tolerability, Pharmacokinetics, and Pharmacodynamics of a Single Dose of DCR-PHXC in Patients with Primary Hyperoxaluria Type 3

Summary

EudraCT number	2020-000344-67
Trial protocol	GB DE FR NL
Global end of trial date	07 September 2021

Results information

Result version number	v1 (current)
This version publication date	24 August 2022
First version publication date	24 August 2022

Trial information

Trial identification

Sponsor protocol code	DCR-PHXC-104

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002493-PIP01-18
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 October 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 September 2021
Global end of trial reached?	Yes
Global end of trial date	07 September 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of a single dose of nedosiran (DCR-PHXC) in patients with PH3

Protection of trial subjects:

The Investigator or their representative explained the nature of the study to the participant or their legally authorized representative and answered all questions regarding the study.

Participants were informed that their participation was voluntary. Participants or their legally authorized representative were required to sign a statement of informed consent that met the requirements of 21 CFR 50, local regulations, ICH guidelines, HIPAA requirements, where applicable, and the institutional review board/independent ethics committee or study center.

The medical record included a statement that written informed consent was obtained before the participant was enrolled in the study and the date the written consent was obtained. The authorized person obtaining the informed consent also signed the informed consent form (ICF).

Participants were re-consented to the most current version of the ICF(s) during their participation in the study.

A copy of the ICF(s) was provided to the participant or the participant's legally authorized representative.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	United States: 4
Worldwide total number of subjects	6
EEA total number of subjects	2

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	5
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The screening period lasted up to 35 days (with an extra 7-day period for participants who were required to repeat screening 24-hour urine collections or initially unanalyzable screening laboratory assessment samples)

Period 1

Period 1 title	Screening Period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Nedosiran

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Nedosiran
Investigational medicinal product code	
Other name	DCR-PHXC, nedosiran sodium, DCR-L1360
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A single dose of nedosiran was given on Day 1 to those randomized to the nedosiran arm through subcutaneous injection (thigh or abdomen).

No nedosiran was administered during the Screening Period or the Follow-up Period.

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	0.9% saline
Investigational medicinal product code	
Other name	sterile saline, normal saline, saline
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A single dose of 0.9% saline for injection was given on Day 1 to those randomized to the placebo arm through subcutaneous injection (thigh or abdomen).

No placebo was administered during the Screening Period or the Follow-up Period.

Number of subjects in period 1	Nedosiran	Placebo
Started	4	2
Completed	4	2

Period 2

Period 2 title	Dosing Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Blinding implementation details:

All participants were centrally assigned to randomized study intervention using an interactive web response system.

Arms

Are arms mutually exclusive?	Yes
Arm title	Nedosiran
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Nedosiran
Investigational medicinal product code	
Other name	DCR-PHXC, nedosiran sodium, DCR-L1360
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Sterile formulation of drug substance (DCR-L1360) was provided in water for injection at 170 mg/mL sodium salt (free acid equivalent [FAE] 160 mg/mL). A single dose of nedosiran was given on Day 1 to those randomized to the nedosiran arm through subcutaneous injection (thigh or abdomen) at the following dose levels:

Age \geq 12 years: 3 mg/kg (FAE 2.8 mg/kg)

Age 6-11 years: 3.5 mg/kg (FAE 3.3 mg/kg), not to exceed 136 mg

The maximum volume of a single SC injection was 1.0 mL in participants \geq 12 years; if the participant's weight required an injection volume $>$ 1.0 mL, the total dose was administered as 2 or more SC injections of equal volume. The maximum injection volume in participants aged less than 12 years was 0.5 mL; if the participant's weight required an injection volume $>$ 0.5 mL, the total dose was administered as 2 or more SC injections of equal volume.

Arm title	Placebo
Arm description: -	
Arm type	Placebo
Investigational medicinal product name	0.9% saline
Investigational medicinal product code	
Other name	sterile saline, normal saline, saline
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A single dose of 0.9% saline for injection was given on Day 1 through subcutaneous injection (thigh or abdomen), at a volume to match the active drug.

Number of subjects in period 2	Nedosiran	Placebo
Started	4	2
Completed	4	2

Period 3

Period 3 title	Follow-up Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Nedosiran

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Nedosiran
Investigational medicinal product code	
Other name	DCR-PHXC, nedosiran sodium, DCR-L1360
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A single dose of nedosiran was given on Day 1 to those randomized to the nedosiran arm through subcutaneous injection (thigh or abdomen).

No nedosiran was administered during the Screening Period or the Follow-up Period.

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	0.9% saline
Investigational medicinal product code	
Other name	sterile saline, normal saline, saline
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A single dose of 0.9% saline for injection was given on Day 1 to those randomized to the placebo arm through subcutaneous injection (thigh or abdomen).

No placebo was administered during the Screening Period or the Follow-up Period.

Number of subjects in period 3	Nedosiran	Placebo
Started	4	2
Completed	4	2

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 April 2020	v 2.0 (Amendment 1): The 27 February 2020 version of the protocol was updated to incorporate changes to the dosing regimen for 6- to 11-year-old children and to allow for some scheduled study visits to be conducted as telemedicine visits supported by a home health nurse.
13 August 2020	v 3.0 (Amendment 2): The 27 April 2020 version of the protocol was updated to include the dosing regimen for 6-to-11-year-old children based upon modeling and simulation, to update the total blood volume collected, to perform pregnancy testing at Day 57, to perform urinary creatinine testing at Day 43, to remove the exclusion and concomitant therapy criterion related to routine or chronic use of more than 3 grams of acetaminophen/paracetamol daily, and to update the statistical analyses populations. Other administrative changes were also incorporated.
24 September 2020	v 4.0 (Amendment 3): The 13 August 2020 version of the protocol was revised to update the exclusion criterion regarding previous IMP administration, add study interruption and stopping rules, remove the drug screen exclusion criterion, add an inclusion criterion requiring participants to be affiliated with or a beneficiary of a health insurance system (if applicable per national regulations), and add text to clarify that the investigator is obligated to anticipate and address injection site pain.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
