Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 June 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	12 June 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary efficacy objective for this study is to evaluate the efficacy of faricimab 6 mg IVT Q4W compared with aflibercept 2 mg IVT Q4W on the basis of the change from baseline in BCVA at Week 24.

Protection of trial subjects:

This study was conducted in full conformance with the ICH E6 guideline for Good Clinical Practice and the principles of the Declaration of Helsinki, or the laws and regulations of the country in which the research was conducted, whichever afforded the greater protection to the individual. All participants were required to read and sign an informed consent form prior to participation in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	United States: 126
Worldwide total number of subjects	553
EEA total number of subjects	125

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	277
From 65 to 84 years	262
85 years and over	14

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 768 patients were screened; 9 of these patients were rescreened and randomized in the study. A total of 215 patients failed screening due to not meeting the inclusion criteria. A total of 553 patients with BRVO were randomized 1:1 into the study: 276 to the faricimab Q4W arm and 277 to the aflibercept Q4W arm.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A: Faricimab Q4W (Part 1), Faricimab PTI (Part 2)

Arm description:

In Part 1 (Day 1 through Week 24), participants were randomly assigned to Arm A to receive faricimab 6 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections). In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Arm type	Experimental
Investigational medicinal product name	Faricimab
Investigational medicinal product code	RO6867461
Other name	VABYSMO®
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Patients randomly assigned to Arm A received 6 mg faricimab intravitreal injections once every 4 weeks (Q4W) from Day 1 through Week 20 (6 injections) in Part 1 of the study. In Part 2 of the study, patients in Arm A switched from faricimab Q4W to receive 6 mg faricimab intravitreal injections according to a personalized treatment interval (PTI) dosing regimen from Week 24 through Week 68.

Arm title	Arm B: Aflibercept Q4W (Part 1), Faricimab PTI (Part 2)
------------------	---

Arm description:

In Part 1 (Day 1 through Week 24), participants were randomly assigned to Arm B to receive aflibercept 2 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections). In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was to be administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Arm type	Active comparator
Investigational medicinal product name	Faricimab
Investigational medicinal product code	RO6867461
Other name	VABYSMO®
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

In Part 2 of the study, patients in Arm B switched from aflibercept to receive 6 mg faricimab intravitreal

injections according to a personalized treatment interval (PTI) dosing regimen from Week 24 through Week 68.

Investigational medicinal product name	Aflibercept
Investigational medicinal product code	
Other name	Eylea
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Patients randomly assigned to Arm B received 2 mg aflibercept intravitreal injections once every 4 weeks (Q4W) from Day 1 through Week 20 (6 injections) in Part 1 of the study.

Subject analysis set type	Safety analysis

Subject analysis set description:

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Subject analysis set title	Arm B: Aflibercept Q4W to Faricimab PTI (Part 2)
Subject analysis set type	Safety analysis

Subject analysis set description:

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was to be administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Subject analysis set title	All Faricimab Participants
Subject analysis set type	Safety analysis

Subject analysis set description:

This immunogenicity analysis group represents all participants with an evaluable ADA sample. At baseline, evaluable participants were those with an ADA sample prior to faricimab injection, including those who did not receive study treatment; post-baseline, evaluable participants were those with an ADA sample after having received at least one dose of faricimab.

Primary: Part 1: Change from Baseline in Best Corrected Visual Acuity (BCVA) in the Study Eye at Week 24

End point title	Part 1: Change from Baseline in Best Corrected Visual Acuity (BCVA) in the Study Eye at Week 24
-----------------	---

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline BCVA (continuous), and randomization stratification factors [baseline BCVA (≥ 55 and ≤ 54 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. An unstructured covariance structure was used. Missing data were implicitly imputed by MMRM model assuming missing at random. Treatment policy strategy (i.e., all observed values used) was applied to all intercurrent events (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). 95% CI is a rounding of 95.03% CI.

End point type	Primary
----------------	---------

End point timeframe:

From Baseline through Week 24

End point values	Arm A: Faricimab Q4W (Part 1)	Arm B: Aflibercept Q4W (Part 1)		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	276	277		
Units: ETDRS Letters				
arithmetic mean (confidence interval 95%)	16.9 (15.7 to 18.1)	17.5 (16.3 to 18.6)		

Statistical analyses

Statistical analysis title	BCVA Non-inferiority
Statistical analysis description:	
The null hypothesis, $H_0: \mu(\text{faricimab}) - \mu(\text{afibercept}) \leq -4$ letters; the alternative hypothesis, $H_a: \mu(\text{faricimab}) - \mu(\text{afibercept}) > -4$ letters. The final sample size provided >90% power for the non-inferiority assessment (at a one-sided 0.02485 significance level).	
Comparison groups	Arm A: Faricimab Q4W (Part 1) v Arm B: Aflibercept Q4W (Part 1)
Number of subjects included in analysis	553
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	Difference in Adjusted Means
Point estimate	-0.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.2
upper limit	1.1
Variability estimate	Standard error of the mean
Dispersion value	0.84

Notes:

[1] - If the lower bound of a two-sided 95% confidence interval (CI) for the difference in adjusted means of the two treatments (faricimab minus aflibercept) is greater than -4 letters (the non-inferiority margin), then faricimab is considered non-inferior to aflibercept.

Statistical analysis title	BCVA Superiority
Statistical analysis description:	
The final sample size provided >80% power for a 3.5-letter superiority assessment of faricimab over aflibercept.	
Comparison groups	Arm A: Faricimab Q4W (Part 1) v Arm B: Aflibercept Q4W (Part 1)
Number of subjects included in analysis	553
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.4978 ^[2]
Method	Mixed Model of Repeated Measures
Parameter estimate	Difference in Adjusted Means
Point estimate	-0.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.2
upper limit	1.1
Variability estimate	Standard error of the mean
Dispersion value	0.84

Notes:

[2] - Tested at a two-sided 0.0497 significance level.

Secondary: Part 1: Change from Baseline in BCVA in the Study Eye at Specified Timepoints Through Week 24

End point title	Part 1: Change from Baseline in BCVA in the Study Eye at Specified Timepoints Through Week 24
-----------------	---

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline BCVA (continuous), and randomization stratification factors [baseline BCVA (≥ 55 and ≤ 54 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. Secondary: Part 1: Percentage of Participants with ≤ 38 Letters in BCVA (20/200 or Worse Snellen Equivalent) in the Study Eye at Specified Timepoints Through Week 24

End point title	Part 1: Percentage of Participants with ≤ 38 Letters in BCVA (20/200 or Worse Snellen Equivalent) in the Study Eye at Specified Timepoints Through Week 24
-----------------	---

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The weighted percentage of participants was estimated based on the Cochran-Mantel Haenszel (CMH) weights stratified by baseline BCVA (>38 and ≤ 38 letters) and region (U.S. and Canada, Asia, and rest of the world). All observed values were used regardless of the occurrence of an intercurrent event (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). Missing assessments were imputed by last observation carried forward. 95% CI is a rounding of 95.03% CI.

Secondary: Part 1: Change from Baseline in Central Subfield Thickness in the Study Eye at Specified Timepoints Through Week 24

End point title	Part 1: Change from Baseline in Central Subfield Thickness in the Study Eye at Specified Timepoints Through Week 24
-----------------	---

End point description:

Central subfield thickness (CST) was defined as the distance between the internal limiting membrane (ILM) and the retinal pigment epithelium (RPE) using optical coherence tomography (OCT), as assessed by the central reading center. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline CST (continuous), and randomization stratification factors [baseline BCVA (≥ 55 and ≤ 54 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. An unstructured covariance structure was used. Missing data were implicitly imputed by MMRM model assuming missing at random. Treatment policy strategy (i.e., all observed values used) was applied to all intercurrent events (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Percentage of Participants Gaining ≥ 5 Letters in BCVA from Baseline in the Study Eye at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Percentage of Participants Gaining ≥ 5 Letters in BCVA from Baseline in the Study Eye at Specified Timepoints Through Week 72
End point description:	
Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The weighted percentage of participants was estimated based on the Cochran-Mantel Haenszel (CMH) weights stratified by randomization stratification factors [baseline BCVA (≥ 55 and ≤ 54 letters), and region (U.S. and Canada, Asia, and rest of the world)]. All observed values were used regardless of the occurrence of an intercurrent event (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). Missing assessments were imputed by last observation carried forward. 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Percentage of Participants with ≤ 38 Letters in BCVA (20/200 or Worse Snellen Equivalent) in the Study Eye at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Percentage of Participants with ≤ 38 Letters in BCVA (20/200 or Worse Snellen Equivalent) in the Study Eye at Specified Timepoints Through Week 72
-----------------	--

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The weighted percentage of participants was estimated based on the Cochran-Mantel Haenszel (CMH) weights stratified by baseline BCVA (>38 and ≤ 38 letters) and region (U.S. and Canada, Asia, and rest of the world). All observed values were used regardless of the occurrence of an intercurrent event (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). Missing assessments were imputed by last observation carried forward. 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Change from Baseline in NEI VFQ-25 Questionnaire Composite Score at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Change from Baseline in NEI VFQ-25 Questionnaire Composite Score at Specified Timepoints Through Week 72
-----------------	---

End point description:

The NEI VFQ-25 captures a patient's perception of vision-related functioning and vision-related quality of life. The core measure includes 25 items that comprise 11 vision-related subscales and 1 item on general health. The composite score ranges from 0 to 100, with higher scores indicating better vision-related functioning. For the MMRM analysis, the model adjusted for the treatment group, visit, visit-by-treatment group interaction, baseline NEI VFQ-25 Composite Score continuous), baseline BCVA score (≥ 55 and ≤ 54 letters), and region (U.S. and Canada, Asia, and the rest of the world). Observed NEI VFQ-25 assessments were used regardless of the occurrence of intercurrent events. Missing data were implicitly imputed. Invalid BCVA values were excluded. 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Change from Baseline in Central Subfield Thickness in the Study Eye at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Change from Baseline in Central Subfield Thickness in the Study Eye at Specified Timepoints Through Week 72
End point description:	
Central subfield thickness (CST) was defined as the distance between the internal limiting membrane (ILM) and the retinal pigment epithelium (RPE) using optical coherence tomography (OCT), as assessed by the central reading center. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline CST (continuous), and randomization stratification factors [baseline BCVA (≥ 55 and ≤ 54 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. An unstructured covariance structure was used. Missing data were implicitly imputed by MMRM model assuming missing at random. Treatment policy strategy (i.e., all observed values used) was applied to all intercurrent events (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). 95% CI is a rounding of 95.03% CI.

Secondary: Part 2: Change from Week 24 in BCVA in the Study Eye at Specified Timepoints Through Week 72

End point title	Part 2: Change from Week 24 in BCVA in the Study Eye at Specified Timepoints Through Week 72
End point description:	
Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline BCVA (continuous), and randomization stratification factors [baseline BCVA (≥ 55 and ≤ 54 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. An unstructured covariance structure was used. Missing data were implicitly imputed by MMRM model assuming missing at random. Treatment policy strategy (i.e., all observed values used) was applied to all intercurrent events (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). 95% CI is a rounding of 95.03% CI.

End point description:

Anti-drug antibodies (ADAs) against fariciamb were detected in plasma using a validated bridging enzyme-linked immunosorbent assay (ELISA). The number of participants with treatment-emergent ADA-positive samples includes post-baseline evaluable participants with at least one treatment-induced (defined as having an ADA-negative sample or missing sample at baseline and any positive post-baseline sample) or treatment-boosted (defined as having an ADA-positive sample at baseline and any positive post-baseline sample with a titer that is equal to or greater than 4-fold baseline titer) ADA-positive sample during the study treatment period. Treatment-unaffected ADA-positive is a post-baseline sample with a titer that is lower than 4-fold the ADA-positive baseline titer (faricimab arm) or the ADA-positive titer prior to first faricimab injection (aflibercept arm).

End point type	Secondary
----------------	-----------

End point timeframe:

Predose at Day 1 (Baseline), Weeks 4, 24, 28, 52, and 72

End point values	Arm A: Faricimab Q4W (Part 1), Faricimab PTI (Part 2)	Arm B: Aflibercept Q4W (Part 1), Faricimab PTI (Part 2)	All Faricimab Participants	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	274	266	540	
Units: Participants				
Baseline (BL): Total ADA-Positive	3	4	7	
Post-BL: Total ADA-Positive	33	23	56	
Post-BL: Treatment-Emergent ADA-Positive	32	21	53	
Post-BL: Treatment-Unaffected ADA-Positive	1	2	3	

Statistical analyses

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Part 1: From first dose up to Week 24; Part 2: from Week 24 through Week 72

Adverse event reporting additional description:

Safety analysis population: all subjects who received ≥ 1 study drug injection (faricimab or aflibercept). For Part 2, this included: in Arm A, those with Week 24 treatment or dose hold, or if none, follow-up beyond Day 168; in Arm B, those who received ≥ 1 faricimab dose. The eye type (study/fellow) in which an ocular AE had occurred is specified.

Assessment type	Systematic

Reporting groups

Reporting group title	Arm A: Faricimab Q4W (Part 1)
-----------------------	-------------------------------

Reporting group description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm A were to receive faricimab 6 milligrams (mg) administered by intravitreal (IVT) injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections).

Reporting group title	Arm B: Aflibercept Q4W to Faricimab PTI (Part 2)
-----------------------	--

Reporting group description:

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was to be administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Reporting group title	Arm A: Faricimab Q4W to Faricimab PTI (Part 2)
-----------------------	--

Reporting group description:

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Reporting group title	Arm B: Aflibercept Q4W (Part 1)
-----------------------	---------------------------------

Reporting group description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm B were to receive aflibercept 2 milligrams (mg) administered by intravitreal (IVT) injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections).

Serious adverse events	Arm A: Faricimab Q4W (Part 1)	Arm B: Aflibercept Q4W to Faricimab PTI (Part 2)	Arm A: Faricimab Q4W to Faricimab PTI (Part 2)

occurrences (all)	6		
Upper respiratory tract infection			
subjects affected / exposed	5 / 274 (1.82%)		
occurrences (all)	5		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 November 2020	Protocol version 2, the summary of major changes from protocol version 1 were: -Due to extenuating circumstances, such as the Coronavirus Disease 2019 (COVID-19) pandemic, patients may not have had the ability to complete certain trial activities, therefore, in order to ensure adequate power for the primary endpoint, the sample size was increased to mitigate the loss of patients, loss of data, and the potential impact of protocol deviations affecting efficacy analyses.; -Clarified that missed mandatory pharmacokinetic (PK), pharmacodynamic (PD), or anti-drug antibody (ADA) samples be obtained at the next scheduled visit the patient attended.; -Clarified administration guidelines of the National Eye Institute 25-Item Visual Functioning Questionnaire (NEI VFQ-25) to include interviews over the telephone.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
