Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 July 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	12 July 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary efficacy objective for this study is to evaluate the efficacy of faricimab 6 mg IVT Q4W compared with aflibercept 2 mg IVT Q4W on the basis of the change from baseline in BCVA at Week 24.

Protection of trial subjects:

This study was conducted in full conformance with the ICH E6 guideline for Good Clinical Practice and the principles of the Declaration of Helsinki, or the laws and regulations of the country in which the research was conducted, whichever afforded the greater protection to the individual. All participants were required to read and sign an informed consent form prior to participation in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Worldwide total number of subjects	729
EEA total number of subjects	164

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	320
From 65 to 84 years	377
85 years and over	32

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 1004 patients were screened; 14 of these patients were rescreened and randomized in the study. A total of 274 patients failed screening due to not meeting the inclusion criteria. A total of 729 patients with C/HRVO were randomized 1:1 into the study: 366 to the faricimab Q4W arm and 363 to the aflibercept Q4W arm.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A: Faricimab Q4W (Part 1), Faricimab PTI (Part 2)

Arm description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm A will receive faricimab 6 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections). In Part 2 (from Week 24 to Week 72), participants will receive faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure will be administered during study visits at which no faricimab treatment is administered (according to the PTI dosing regimen).

Arm type	Experimental
Investigational medicinal product name	Faricimab
Investigational medicinal product code	RO6867461
Other name	VABYSMO®
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Patients randomly assigned to Arm A received 6 mg faricimab intravitreal injections once every 4 weeks (Q4W) from Day 1 through Week 20 (6 injections) in Part 1 of the study. In Part 2 of the study, patients in Arm A switched from faricimab Q4W to receive 6 mg faricimab intravitreal injections according to a personalized treatment interval (PTI) dosing regimen from Week 24 through Week 68.

Arm title	Arm B: Aflibercept Q4W (Part 1), Faricimab PTI (Part 2)
------------------	---

Arm description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm B will receive aflibercept 2 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections). In Part 2 (from Week 24 to Week 72), participants will receive faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure will be administered during study visits at which no faricimab treatment is administered (according to the PTI dosing regimen).

Arm type	Active comparator
Investigational medicinal product name	Faricimab
Investigational medicinal product code	RO6867461
Other name	VABYSMO®
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

In Part 2 of the study, patients in Arm B switched from aflibercept to receive 6 mg faricimab intravitreal

injections according to a personalized treatment interval (PTI) dosing regimen from Week 24 through Week 68.

Investigational medicinal product name	Aflibercept
Investigational medicinal product code	
Other name	Eylea
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Patients randomly assigned to Arm B received 2 mg aflibercept intravitreal injections once every 4 weeks (Q4W) from Day 1 through Week 20 (6 injections) in Part 1 of the study.

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Subject analysis set title	Arm B: Aflibercept Q4W to Faricimab PTI (Part 2)
Subject analysis set type	Safety analysis

Subject analysis set description:

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was to be administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Subject analysis set title	Arm A: Faricimab Q4W (Part 1)
Subject analysis set type	Safety analysis

Subject analysis set description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm A will receive faricimab 6 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections).

Subject analysis set title	Arm B: Aflibercept Q4W (Part 1)
Subject analysis set type	Safety analysis

Subject analysis set description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm B will receive aflibercept 2 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections).

Subject analysis set title	All Faricimab Participants
Subject analysis set type	Safety analysis

Subject analysis set description:

This immunogenicity analysis group represents all participants with an evaluable ADA sample. At baseline, evaluable participants were those with an ADA sample prior to faricimab injection, including those who did not receive study treatment; post-baseline, evaluable participants were those with an ADA sample after having received at least one dose of faricimab.

Primary: Part 1: Change from Baseline in Best Corrected Visual Acuity (BCVA) in the Study Eye at Week 24

End point title	Part 1: Change from Baseline in Best Corrected Visual Acuity (BCVA) in the Study Eye at Week 24
-----------------	---

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline BCVA (continuous), and randomization stratification factors

[baseline BCVA (≤ 34 , $35-54$, and ≥ 55 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. An unstructured covariance structure was used. Missing data were implicitly imputed by MMRM model assuming missing at random. Treatment policy strategy (i.e., all observed values used) was applied to all intercurrent events (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). 95% CI is a rounding of 95.03% CI.

End point type	Primary
End point timeframe:	
From Baseline through Week 24	

End point values	Arm A: Faricimab Q4W (Part 1)	Arm B: Aflibercept Q4W (Part 1)		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	366	363		
Units: ETDRS Letters				
arithmetic mean (confidence interval 95%)	16.9 (15.4 to 18.3)	17.3 (15.9 to 18.8)		

Statistical analyses

Statistical analysis title	BCVA Superiority
----------------------------	------------------

Statistical analysis description:

The final sample size provided >80% power for a 3.5-letter superiority assessment of faricimab over aflibercept (at a two-sided 0.0497 significance level).

Comparison groups	Arm A: Faricimab Q4W (Part 1) v Arm B: Aflibercept Q4W (Part 1)
Number of subjects included in analysis	729
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.6715 ^[1]
Method	Mixed Model of Repeated Measures
Parameter estimate	Difference in Adjusted Means
Point estimate	-0.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.5
upper limit	1.6
Variability estimate	Standard error of the mean
Dispersion value	1.04

Notes:

[1] - Tested at a two-sided $p < 0.0497$ significance level.

Statistical analysis title	BCVA Non-inferiority
----------------------------	----------------------

Statistical analysis description:

The null hypothesis, $H_0: \mu(\text{faricimab}) - \mu(\text{aflibercept}) \leq -4$ letters; the alternative hypothesis, $H_a: \mu(\text{faricimab}) - \mu(\text{aflibercept}) > -4$ letters. The final sample size provided >90% power for the non-inferiority assessment (at a one-sided 0.02485 significance level).

Comparison groups	Arm A: Faricimab Q4W (Part 1) v Arm B: Aflibercept Q4W (Part 1)
-------------------	---

	1)
Number of subjects included in analysis	729
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[2]
Parameter estimate	Difference in Adjusted Means
Point estimate	-0.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.5
upper limit	1.6
Variability estimate	Standard error of the mean
Dispersion value	1.04

Notes:

[2] - If the lower bound of a two-sided 95% confidence interval (CI) for the difference in adjusted means of the two treatments (faricimab minus aflibercept) is greater than -4 letters (the non-inferiority margin), then faricimab is considered non-inferior to aflibercept.

Secondary: Part 1: Percentage of Participants Gaining ≥15 Letters in BCVA from Baseline in the Study Eye at Week 24

End point title	Part 1: Percentage of Participants Gaining ≥15 Letters in BCVA from Baseline in the Study Eye at Week 24

End point title	Part 1: Percentage of Participants Avoiding a Loss of ≥ 5 Letters in BCVA from Baseline in the Study Eye at Specified Timepoints Through Week 24
-----------------	---

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The weighted percentage of participants was estimated based on the Cochran-Mantel Haenszel (CMH) weights stratified by randomization stratification factors [baseline BCVA (≤ 34 , 35-54, and ≥ 55 letters), and region (U.S. and Canada, Asia, and rest of the world)]. All observed values were used regardless of the occurrence of an intercurrent event (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). Missing assessments were imputed by last observation carried forward. 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Percentage of Participants Gaining ≥ 10 Letters in BCVA from Baseline in the Study Eye at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Percentage of Participants Gaining ≥10 Letters in BCVA from Baseline in the Study Eye at Specified Timepoints Through Week 72
End point description:	
Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The weighted percentage of participants was estimated based on the Cochran-Mantel Haenszel (CMH) weights stratified by randomization stratification factors [baseline BCVA (≤34, 35-54, and ≥55 letters), and region (U.S. and Canada, Asia, and rest of the world)]. All observed values were used regardless of the occurrence of an intercurrent event (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). Missing assessments were imputed by last observation carried forward. 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Percentage of Participants Achieving ≥ 69 Letters in BCVA (20/40 or Better Snellen Equivalent) in the Study Eye at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Percentage of Participants Achieving ≥ 69 Letters in BCVA (20/40 or Better Snellen Equivalent) in the Study Eye at Specified Timepoints Through Week 72
-----------------	---

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The weighted percentage of participants was estimated based on the Cochran-Mantel Haenszel (CMH) weights stratified by randomization stratification factors [baseline BCVA (≤ 34 , 35-54, and ≥ 55 letters), and region (U.S. and Canada, Asia, and rest of the world)]. All observed values were used regardless of the occurrence of an intercurrent event (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). Missing assessments were imputed by last observation carried forward. 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Change from Baseline in Central Subfield Thickness in the Study Eye at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Change from Baseline in Central Subfield Thickness in the Study Eye at Specified Timepoints Through Week 72
-----------------	--

End point description:

Central subfield thickness (CST) was defined as the distance between the internal limiting membrane (ILM) and the retinal pigment epithelium (RPE) using optical coherence tomography (OCT), as assessed by the central reading center. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline CST (continuous), and randomization stratification factors [baseline BCVA (≤ 34 , 35-54, and ≥ 55 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. An unstructured covariance structure was used. Missing data were implicitly imputed by MMRM model assuming missing at random. Treatment policy strategy (i.e., all observed values used) was applied to all intercurrent events (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). 95% CI is a rounding of 95.03% CI.

Secondary: Parts 1 and 2: Percentage of Participants with Absence of Intraretinal Fluid and Subretinal Fluid in the Study Eye at Specified Timepoints Through Week 72

End point title	Parts 1 and 2: Percentage of Participants with Absence of Intraretinal Fluid and Subretinal Fluid in the Study Eye at Specified Timepoints Through Week 72
-----------------	--

End point description:

Intraretinal fluid and subretinal fluid were measured in the study eye using optical coherence tomography (OCT) in the central subfield (center 1 mm) by a central reading center. The weighted percentage of participants was estimated based on the Cochran-Mantel Haenszel (CMH) weights stratified by randomization stratification factors [baseline BCVA (≤ 34 , 35-54, and ≥ 55 letters), and region (U.S. and Canada, Asia, and rest of the world)]. All observed values were used regardless of the occurrence of an intercurrent event (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). Missing assessments were imputed by last observation carried forward. 95% CI is a rounding of 95.03% CI.

Secondary: Part 2: Change from Week 24 in BCVA in the Study Eye at Specified Timepoints Through Week 72

End point title	Part 2: Change from Week 24 in BCVA in the Study Eye at
-----------------	---

End point description:

Best Corrected Visual Acuity (BCVA) was measured on the Early Treatment Diabetic Retinopathy Study (ETDRS) chart at a starting distance of 4 meters. The BCVA letter score ranges from 0 to 100 (best score), and a gain in BCVA from baseline indicates an improvement in visual acuity. The Mixed Model of Repeated Measures (MMRM) analysis included the categorical covariates of treatment arm, visit, visit-by-treatment arm interaction, baseline BCVA (continuous), and randomization stratification factors [baseline BCVA (≤ 34 , 35-54, and ≥ 55 letters), and region (U.S. and Canada, Asia, and rest of the world)] as fixed effects. An unstructured covariance structure was used. Missing data were implicitly imputed by MMRM model assuming missing at random. Treatment policy strategy (i.e., all observed values used) was applied to all intercurrent events (discontinuation of treatment due to AEs or lack of efficacy, use of prohibited therapy). 95% CI is a rounding of 95.03% CI.

End point title	Incidence and Severity of Ocular Adverse Events in the Study Eye, with Severity Determined According to Adverse Event Severity Grading Scale
-----------------	--

End point description:

This analysis of adverse events (AEs) only includes ocular AEs that occurred in the study eye. Investigators sought information on AEs at each contact with the participants. All AEs were recorded and the investigator made an assessment of seriousness, severity, and causality of each AE. Ocular AEs of special interest included the following: Suspected transmission of an infectious agent by the study drug; Sight-threatening AEs that cause a drop in visual acuity (VA) score ≥ 30 letters lasting more than 1 hour, require surgical or medical intervention to prevent permanent loss of sight, or are associated with severe intraocular inflammation (IOI).

End point title Incidence of Ocular Adverse Events in the Fellow Eye

End point description:

This analysis of adverse events (AEs) only includes ocular AEs that occurred in the fellow eye. Investigators sought information on AEs at each contact with the participants. All AEs were recorded and the investigator made an assessment of seriousness, severity, and causality of each AE. Ocular AEs of special interest included the following: Suspected transmission of an infectious agent by the study drug; Sight-threatening AEs that cause a drop in visual acuity (VA) score ≥ 30 letters lasting more than 1 hour, require surgical or medical intervention to prevent permanent loss of sight, or are associated with severe intraocular inflammation (IOI).

End point type Secondary

End point timeframe:

Part 1: From first dose up to Week 24; Part 2: from Week 24 through Week 72

End point values	Arm A: Faricimab Q4W to Faricimab PTI (Part 2)	Arm B: Aflibercept Q4W to Faricimab PTI (Part 2)	Arm A: Faricimab Q4W (Part 1)	Arm B: Aflibercept Q4W (Part 1)

Secondary: Incidence of Non-Ocular Adverse Events

End point title	Incidence of Non-Ocular Adverse Events
-----------------	--

End point description:

This analysis of adverse events (AEs) only includes non-ocular (systemic) AEs. Investigators sought information on adverse events (AEs) at each contact with the participants. All AEs were recorded and the investigator made an assessment of seriousness, severity, and causality of each AE. The non-ocular AE of special interest was: Cases of potential drug-induced liver injury that include an elevated ALT or AST in combination with either an elevated bilirubin or clinical jaundice, as defined by Hy's Law.

Secondary: Number of Participants with Anti-Drug Antibodies (ADAs) to Faricimab at Baseline and Post-Baseline During the Study

End point title	Number of Participants with Anti-Drug Antibodies (ADAs) to Faricimab at Baseline and Post-Baseline During the Study
-----------------	---

End point description:

Anti-drug antibodies (ADAs) against fariciamb were detected in plasma using a validated bridging enzyme-linked immunosorbent assay (ELISA). The number of participants with treatment-emergent ADA-positive samples includes post-baseline evaluable participants with at least one treatment-induced (defined as having an ADA-negative sample or missing sample at baseline and any positive post-baseline sample) or treatment-boosted (defined as having an ADA-positive sample at baseline and any

positive post-baseline sample with a titer that is equal to or greater than 4-fold baseline titer) ADA-positive sample during the study treatment period. Treatment-unaffected ADA-positive is a post-baseline sample with a titer that is lower than 4-fold the ADA-positive baseline titer (faricimab arm) or the ADA-positive titer prior to first faricimab injection (aflibercept arm).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Part 1: From first dose up to Week 24; Part 2: from Week 24 through Week 72

Adverse event reporting additional description:

Safety analysis population: all subjects who received ≥ 1 study drug injection (faricimab or aflibercept). For Part 2, this included: in Arm A, those with Week 24 treatment or dose hold, or if none, follow-up beyond Day 168; in Arm B, those who received ≥ 1 faricimab dose. The eye type (study/fellow) in which an ocular AE had occurred is specified.

Assessment type	Systematic

Reporting groups

Reporting group title	Arm A: Faricimab Q4W (Part 1)
-----------------------	-------------------------------

Reporting group description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm A will receive faricimab 6 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections).

Reporting group title	Arm B: Aflibercept Q4W to Faricimab PTI (Part 2)
-----------------------	--

Reporting group description:

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was to be administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Reporting group title	Arm A: Faricimab Q4W to Faricimab PTI (Part 2)
-----------------------	--

Reporting group description:

In Part 2 (from Week 24 to Week 72), participants received faricimab 6 mg by IVT injection according to a personalized treatment interval (PTI) dosing regimen. To preserve masking for Part 2, a sham procedure was administered during study visits at which no faricimab treatment was administered (according to the PTI dosing regimen).

Reporting group title	Arm B: Aflibercept Q4W (Part 1)
-----------------------	---------------------------------

Reporting group description:

In Part 1 (Day 1 through Week 24), participants randomly assigned to Arm B will receive aflibercept 2 milligrams (mg) by IVT injection once every 4 weeks (Q4W) from Day 1 through Week 20 (a total of 6 injections).

Serious adverse events	Arm A: Faricimab Q4W (Part 1)	Arm B: Aflibercept Q4W to Faricimab PTI (Part 2)	Arm A: Faricimab Q4W to Faricimab PTI (Part 2)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 November 2020	Protocol Version 2, the summary of major changes from Version 1 were as follows: -Due to extenuating circumstances, such as the Coronavirus Disease 2019 (COVID-19) pandemic, patients may not have had the ability to complete certain trial activities, therefore, in order to ensure adequate power for the primary endpoint, the sample size was increased to mitigate the loss of patients, loss of data, and the potential impact of protocol deviations affecting efficacy analyses.; -Clarified that missed mandatory pharmacokinetic (PK), pharmacodynamic (PD), or anti-drug antibody (ADA) samples be obtained at the next scheduled visit the patient attended.; -Clarified administration guidelines of the National Eye Institute 25-Item Visual Functioning Questionnaire (NEI VFQ-25) to include interviews over the telephone.; -Corrected the description of the BCVA stratification factor's text in the protocol (programming in IxRS was initially correct so no changes in programming were necessary).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
