

Clinical trial results:

Proof-of-concept, multi-center, randomized, double-blind, placebo-controlled, two-way crossover study to investigate the effect strength of BAY 2586116 on the apnea-hypopnea-index after repetitive nasal doses compared to placebo in 80 valid participants with moderate to severe obstructive sleep apnea

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 November 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 November 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the effect strength of BAY2586116 on obstructive sleep apnea (OSA) severity after repetitive doses compared to placebo

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent was read by and explained to all the subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 62
Country: Number of subjects enrolled	Switzerland: 31
Worldwide total number of subjects	93
EEA total number of subjects	62

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	63

From 65 to 84 years	30
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 3 centers, 2 centers in Germany and 1 center in Switzerland with first subject first visit on 03-Mar-2021 and last subject last visit on 13-Sep-2021

Pre-assignment

Screening details:

120 subjects were screened, 93 subjects were randomized, 47 subjects to BAY2586116-Placebo intervention sequence and 46 to Placebo-BAY2586116 intervention sequence. 2 of these subjects didn't receive treatment as planned, 1 received BAY2586116 twice and 1 received placebo twice. All 93 randomized subjects received at least 1 dose of study drug.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	BAY2586116 160ug (nasal spray) - Placebo

Arm description:

Subjects received multiple daily doses of 160 µg BAY2586116 nasal spray first in treatment period 1, and matching placebo in treatment period 2

Arm type	Experimental
Investigational medicinal product name	BAY2586116
Investigational medicinal product code	BAY2586116
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Nasal use

Dosage and administration details:

160 µg BAY2586116 nasally. Applied once per night for 6 days (+ 1 optional day) and 1 single dose prior to overnight polysomnography (PSG).

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Nasal use

Dosage and administration details:

Placebo nasally. Applied once per night for 6 days (+ 1 optional day) and 1 single dose prior to overnight PSG.

Arm title	Placebo - BAY2586116 160ug (nasal spray)
------------------	--

Arm description:

Subjects received matching placebo first in treatment period 1, and multiple daily doses of 160 µg BAY2586116 nasal spray in treatment period 2

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Nasal use

Dosage and administration details:

Placebo nasally. Applied once per night for 6 days (+ 1 optional day) and 1 single dose prior to overnight PSG.

Investigational medicinal product name	BAY2586116
Investigational medicinal product code	BAY2586116
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Nasal use

Dosage and administration details:

160 µg BAY2586116 nasally. Applied once per night for 6 days (+ 1 optional day) and 1 single dose prior to overnight PSG.

Arm title	BAY2586116 160ug (nasal spray)-BAY2586116 160ug (nasal spray)
------------------	---

Arm description:

Subject received multiple daily doses of 160 µg BAY2586116 nasal spray first in treatment period 1, and then multiple daily doses of 160 µg BAY2586116 nasal spray in treatment period 2 by mistake

Arm type	Experimental
Investigational medicinal product name	BAY2586116
Investigational medicinal product code	BAY2586116
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Nasal use

Dosage and administration details:

160 µg BAY2586116 nasally. Applied once per night for 6 days (+ 1 optional day) and 1 single dose prior to overnight PSG.

Arm title	Placebo - Placebo
------------------	-------------------

Arm description:

Subject received matching placebo first in treatment period 1, and then matching placebo in treatment period 2 by mistake

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Nasal use

Dosage and administration details:

Placebo nasally. Applied once per night for 6 days (+ 1 optional day) and 1 single dose prior to overnight PSG.

Statistical analyses

Statistical analysis title	Difference in responder rates between treatment
----------------------------	---

Statistical analysis description:

Success criterion: Prob(Responder rate "Placebo"<Responder rate "BAY 2586116" | data) ≥ 95%. Responder rates were compared using a Bayesian logistic regression. The posterior probability Prob(Responder rate "Placebo"<Responder rate "BAY 2586116" | data) = 80.54%, estimated difference in responder rates and 90% credible intervals were presented. Erroneously, database auto calculates the total number of subjects for the selected arms. Number of subjects evaluated in this analysis was 84.

Comparison groups	Placebo v BAY2586116
Number of subjects included in analysis	168
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Mean difference (final values)
Point estimate	-0.04
Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.13
upper limit	0.05

Secondary: Number of subjects with at least one treatment-emergent adverse event (TEAE) and maximum severity of TEAEs per subject

End point title	Number of subjects with at least one treatment-emergent adverse event (TEAE) and maximum severity of TEAEs per subject
-----------------	--

End point description:

An adverse event (AE) was any untoward medical occurrence in a patient or clinical study subject whether or not considered related to the study intervention

AEs were considered to be treatment-emergent if they started or worsened after first application of study intervention in each period up to 2 days after end of treatment in each period with study intervention

An serious adverse event (SAE) was defined as any untoward medical occurrence that, at any dose:

- Results in death
- Is life-threatening
- Requires inpatient hospitalization or prolongation of existing hospitalization
- Results in persistent disability/incapacity
- Is a congenital anomaly/birth defect
- Other situations

End point type	Secondary
----------------	-----------

End point timeframe:

From first application of study intervention up to 2 days after end of treatment in each period with study intervention

End point values	BAY2586116	Placebo

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dosing up to 2 days after end of treatment in each period with study intervention. Adverse event reporting for the deaths (all causes) considers all deaths that occurred at any time during the study before the last contact.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 February 2021	<p>Amendment 1 dated 26 FEB 2021, was a substantial amendment. It was issued to globally implement changes requested by the German and Swiss Competent Authorities after review of the clinical study protocol and before approval. The amendment included the following key modifications:</p> <ul style="list-style-type: none">• The description of the selected study population was changed from "Male and female participants with OSA who are otherwise healthy" to "Male and female participants with OSA"• Exclusion criteria for heart failure, uncontrolled arterial hypertension and chronic obstructive pulmonary disease (COPD) were added• Prohibited medication in concomitant medication was specified• Definitions to exclude disease related findings from laboratory/AE assessment were deleted• Data Monitoring Committee (DMC) was added• Treatable traits were adapted to include traits derived from treatment PSGs• Other treatments of OSA in addition to continuous positive airway pressure (CPAP) for pre-treatment of OSA were included• The timepoints for activities before start of PSG were adapted• The wording of the primary endpoint was changed

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No
