

## Clinical trial results:

### A Phase III, Randomized, Multicenter, Double-blind, Placebo-controlled Study to Determine the Efficacy of Adjuvant Durvalumab in Combination with Platinum-based Chemotherapy in Completely Resected Stage II-III NSCLC (MERMAID-1)

#### Summary

EudraCT number	2020-000556-35
Trial protocol	GB NL DK BG HU DE BE SE PL CZ GR IT FR RO
Global end of trial date	31 August 2023

#### Results information

Result version number	v1 (current)
This version publication date	08 September 2024
First version publication date	08 September 2024

#### Trial information

##### Trial identification

Sponsor protocol code	D910LC00001
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04385368
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	AstraZeneca AB
Sponsor organisation address	Forskargatan 18, Södertälje, Sweden, 151 85
Public contact	Global Clinical Lead, AstraZeneca AB, +1 877-240-9479, information.center@astrazeneca.com
Scientific contact	Global Clinical Lead, AstraZeneca AB, +1 877-240-9479, information.center@astrazeneca.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	31 August 2023
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the efficacy of durvalumab + standard of care (SoC) chemotherapy compared to placebo + SoC chemotherapy as measured by disease-free survival (DFS) in all participants.

Protection of trial subjects:

This study was conducted in accordance with the protocol and with the following: consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines, applicable International Council for Harmonization Good Clinical Practice Guidelines, and applicable laws and regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 1
Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Brazil: 3
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Czechia: 4
Country: Number of subjects enrolled	Denmark: 1
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Greece: 5

Country: Number of subjects enrolled	Israel: 2
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Japan: 14
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Russian Federation: 5
Country: Number of subjects enrolled	Korea, Republic of: 3
Country: Number of subjects enrolled	Spain: 2

Country: Number of subjects enrolled	Sweden: 2
Country: Number of subjects enrolled	Taiwan: 4
Country: Number of subjects enrolled	Thailand: 2
Country: Number of subjects enrolled	Türkiye: 4
Country: Number of subjects enrolled	United States: 6
Country: Number of subjects enrolled	Viet Nam: 1
Worldwide total number of subjects	89
EEA total number of subjects	36

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	43
From 65 to 84 years	46
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This Phase III, multicenter, randomized, double-blind, placebo-controlled study was conducted in participants with completely resected stage II to III non-small cell lung cancer (NSCLC) at 63 sites across 25 countries from 17 July 2020 to 31 August 2023.

### Pre-assignment

Screening details:

A total of 89 participants were randomized in a 1:1 ratio to durvalumab given concurrently with SoC chemotherapy followed by durvalumab monotherapy, or to a matched placebo given concurrently with SoC chemotherapy followed by placebo.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Durvalumab + SoC

Arm description:

Participants received durvalumab 1500 milligrams (mg) via intravenous (IV) infusion in combination with SoC chemotherapy on Day 1 of each 3-week cycle for up to 4 cycles, followed by durvalumab monotherapy continued on Day 1 of each 4-week cycle for up to 10 additional cycles until unacceptable toxicity, withdrawal of consent, or another discontinuation criterion was met.

For participants with tumors of squamous histology, permitted SoC chemotherapy was a combination of carboplatin (area under the serum drug concentration-time curve [AUC] 6) and paclitaxel 200 milligram per square meter (mg/m<sup>2</sup>) via IV infusion on Day 1 of each 3-week cycle, for 4 cycles.

For participants with tumors of non-squamous tumor histology, permitted SoC chemotherapy regimens were pemetrexed 500 mg/m<sup>2</sup> in combination with either cisplatin 75 mg/m<sup>2</sup> or carboplatin AUC 5, all via IV infusion on Day 1 of each 3-week cycle, for 4 cycles.

Arm type	Experimental
Investigational medicinal product name	Durvalumab
Investigational medicinal product code	MEDI4736
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Durvalumab was provided as 500-mg vial solution for infusion after dilution, 50 milligrams per milliliter (mg/mL). Participants received durvalumab 1500 mg via IV infusion over 60 minutes on Day 1 of each 3-week cycle for 14 cycles, unless protocol-specified discontinuation criterion was met.

Investigational medicinal product name	Pemetrexed + Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pemetrexed (500 mg/m<sup>2</sup>) and carboplatin (AUC 5) on Day 1 of each 3-week cycle for 4 cycles.

Investigational medicinal product name	Pemetrexed + Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion

Routes of administration	Intravenous use
Dosage and administration details:	
Pemetrexed (500 mg/m <sup>2</sup> ) and cisplatin (75 mg/m <sup>2</sup> ) on Day 1 of each 3-week cycle for 4 cycles.	
Investigational medicinal product name	Carboplatin + Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Paclitaxel (200 mg/m <sup>2</sup> ) and carboplatin (AUC 6) on Day 1 of each 3-week cycle for 4 cycles.	
<b>Arm title</b>	Placebo + SoC
Arm description:	
<p>Participants received matching placebo via IV infusion in combination with SoC chemotherapy on Day 1 of each 3-week cycle for up to 4 cycles, followed by matching placebo continued on Day 1 of each 4-week cycle for up to 10 additional cycles until unacceptable toxicity, withdrawal of consent, or another discontinuation criterion was met.</p> <p>For participants with tumors of squamous histology, permitted SoC chemotherapy was a combination of carboplatin (AUC 6) and paclitaxel 200 mg/m<sup>2</sup> via IV infusion on Day 1 of each 3-week cycle, for 4 cycles.</p> <p>For participants with tumors of non-squamous tumor histology, permitted SoC chemotherapy regimens were pemetrexed 500 mg/m<sup>2</sup> in combination with either cisplatin 75 mg/m<sup>2</sup> or carboplatin AUC 5, all via IV infusion on Day 1 of each 3-week cycle, for 4 cycles.</p>	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Matching placebo was provided as vial solution for infusion after dilution. Participants received matching placebo via IV infusion over 60 minutes on Day 1 of each 3-week cycle for 14 cycles, unless protocol-specified discontinuation criterion was met.	
Investigational medicinal product name	Carboplatin + Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Paclitaxel (200 mg/m <sup>2</sup> ) and carboplatin (AUC 6) on Day 1 of each 3-week cycle for 4 cycles.

### Primary: Disease-free Survival (DFS) in Full Analysis Set (FAS) (Using Investigator Assessments According to Response Evaluation Criteria in Solid Tumors 1.1 [RECIST 1.1])

End point title	Disease-free Survival (DFS) in Full Analysis Set (FAS) (Using Investigator Assessments According to Response Evaluation Criteria in Solid Tumors 1.1 [RECIST 1.1]) <sup>[1]</sup>
-----------------	---

**End point description:**

DFS was defined as the time from the date of randomization until either of the following events, whichever occurred first: disease recurrence using Investigator RECIST 1.1 assessments (i.e., local or regional recurrence, distant recurrence, second primary NSCLC) or death from any cause. The FAS included all randomized participants. 9999 indicates that median and upper limit of confidence interval were not estimable due to insufficient number of participants with events at study closure and due to limited duration of follow-up.

End point type	Primary
----------------	---------

**End point timeframe:**

Every 12 weeks (q12w)  $\pm$  1 week until appearance of RECIST 1.1-defined disease recurrence or until primary DFS analysis, up to 33.28 months

**Notes:**

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was reported.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment emergent adverse events (TEAEs) were collected from first dose of study treatment up to 90 days after last dose of study treatment, 19.1 months. All-cause mortality was assessed from start of randomization up to completion of study, 35 months.

Adverse event reporting additional description:

The safety analysis set consisted of all randomized participants who received at least 1 dose of study treatment (durvalumab/placebo and/or SoC chemotherapy).

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 April 2021	Removed secondary objectives and endpoints that were no longer considered necessary to analyze. Removed never smokers from the eligible population to reduce the probability of screen failure due to failure to meet the 50 variants required for MRD assessment. Changes were made to aspects of the screening procedures for simplification and clarification to provide flexibility during screening; and to reflect real world practice.
06 May 2021	Updated numbering in sections: Exclusion Criteria and Lifestyle Restrictions. Updated SAS definition. Clarified regarding prohibited prior radiotherapy.
02 August 2022	Revised planned analyses of objectives and endpoints based on the reduced sample size, following study enrollment closure on 25 May 2022. Removed text for long-term survival follow up. Updated end of study definition to account for early closure of study enrollment.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Sponsor closed enrollment early due to changes in treatment landscape. Interpretation of efficacy results is inconclusive due to small sample size, resulting in wide confidence intervals, and limited follow-up. No new safety concerns were identified.

Notes:
