Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 November 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 July 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of PRV-015 in attenuating the symptoms of celiac disease in adult participants with nonresponsive celiac disease as measured by the Abdominal Symptoms domain of the celiac disease patient reported outcome (CeD PRO) questionnaire.

Protection of trial subjects:

Participants were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the participant and considering the local culture. During the course of the trial, participants were provided with individual participant cards indicating the nature of the trial the participant is participating, contact details and any information needed in the event of a medical emergency.

Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 August 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Spain: 32
Country: Number of subjects enrolled	United States: 187
Worldwide total number of subjects	226
EEA total number of subjects	33

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	215
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 39 centers in 4 countries. A total of 648 participants were screened between 24 August 2020 and 16 January 2024, of which 255 participants were screen failures and 5 participants discontinued before run-in period. Screen failures were mainly due to not meeting eligibility criteria.

Pre-assignment

Screening details:

A total of 388 participants entered the single-blind placebo run-in period and among them, 9 participants discontinued during run-in or were not dosed, and 27 participants were considered run-in failures. Another 126 participants were considered randomization failures. A total of 226 participants were enrolled and randomized in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo matching with PRV-015 subcutaneous (SC) injection every 2 weeks (q2w) in double-blind treatment period for 24 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo SC injection q2w for 24 weeks.

Arm title	PRV-015 100 mg
------------------	----------------

Arm description:

Participants received PRV-015 100 milligram (mg) SC injection q2w in double-blind treatment period for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	PRV-015
Investigational medicinal product code	
Other name	Ordesekimab, AMG 714
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

PRV-015 100 mg SC injection q2w for 24 weeks.

Arm title	PRV-015 300 mg
------------------	----------------

CeD PRO Abdominal Symptoms Domain Score			
The CeD PRO questionnaire was captured daily in the electronic (e)Diary. The questionnaire included 9 items: abdominal cramping, abdominal pain, bloating, gas, diarrhea, loose stool, nausea, headache and tiredness. Participants were asked to rate their symptom severity on an 11-point scale and scores range from 0 (not experiencing the symptom) to 10 (the worst possible symptom experience). Abdominal Symptoms domain included abdominal cramping, abdominal pain, bloating and gas. Total score for abdominal symptoms domain range from 0 to 40. Higher scores indicated worse outcome.

End point title	Number of Participants With Treatment-Emergent Adverse Events (TEAEs), Treatment-Emergent Serious Adverse Events (SAEs) and Treatment-Emergent Adverse Events of Special Interest (AESIs)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a participant or clinical study participant, temporally associated with the use of study drug, whether or not considered related to the study drug. An SAE was defined as any AE that at any dose resulted in death, was life-threatening, required inpatient hospitalization or prolongation of existing hospitalization, resulted in persistent or significant disability/incapacity, was a congenital anomaly/birth defect, or was an important medical event. AESIs included severe opportunistic infections and hypersensitivity reactions of at least moderate severity. A TEAE was defined as an AE that occurred from the first dose of post-randomization study drug administration through the end of the study. The Safety analysis set included all participants who received at least 1 dose of the study drug post-randomization.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug administration (Day 1) up to 28 days after the last dose administration, 197 days

Adverse event reporting additional description:

The Safety analysis set included all participants who received at least 1 dose of the study drug post-randomization.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 March 2021	The antibody tests on the Day -14 visit (Visit -2) were removed to avoid any delay for the Day 0 visit and the start of study treatment. All urine samples were collected at each visit. The maximum levels of tissue transglutaminase and deamidated gluten peptide antibodies for inclusion was revised from 1.5 to 2.0 times the cutoff value for positivity. The Data Monitoring Committee member composition was updated. The window for the baseline endoscopy was increased to 12 days prior to Visit 2 to improve scheduling feasibility. Updated to allow the inclusion of participants with less common human leukocyte antigen types associated with celiac disease. Clarified the consenting procedures for participants undergoing rescreening. Corrected to include hemoglobin A1C at visits designated in the Schedule of Activities. Clarified the procedures for SAE reporting.
24 March 2022	The level of tissue transglutaminase and deamidated gluten peptide antibodies for study inclusion was revised from <2.0 to <3.0 times the cutoff value for positivity. Updated inclusion and exclusion criteria. The planned method for the analysis of delayed TEAEs in participants who discontinued study treatment was removed and deferred to the Statistical Analysis Plan.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
