

Clinical trial results:

Multi-centre, double-blind, placebo- and reference-controlled, randomised trial to prove the efficacy and safety of Silexan (WS®1265) in patients with a major depressive episode of mild to moderate severity

Summary

EudraCT number	2020-000688-22
Trial protocol	DE PL
Global end of trial date	29 June 2023

Results information

Result version number	v1 (current)
This version publication date	18 April 2024
First version publication date	18 April 2024

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 August 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 June 2023
Global end of trial reached?	Yes
Global end of trial date	29 June 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to demonstrate superiority of 80 mg/day Silexan once daily vs placebo with respect to the change of the MADRS total score between baseline and week 8 when treating Major Depressive Disorders (MDD) of mild to moderate intensity, regardless of adherence to the treatment regime and under the hypothetical condition that treatments which ease depressive symptoms are not available for patients who discontinue from the randomised treatment.

Protection of trial subjects:

Possibility to withdraw consent by patient. Monitoring of adverse events and laboratory parameters.

Background therapy: -

Evidence for comparator:

The comparator Sertraline to be used in this study is a Selective Serotonin Reuptake Inhibitor (SSRIs) indicated for the treatment of MDD. For our outpatient population with mild to moderate MDD we intend to implement a dosage of 50 mg Sertraline. This dose has shown effectiveness (Fabre et al. 1995) and is related with a relatively lower adverse event rate, compared to higher dosages. For the outpatient sample being examined in this study we deem it crucial to have a low adverse event and hence dropout rate.

Actual start date of recruitment	01 October 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 129
Country: Number of subjects enrolled	Germany: 448
Worldwide total number of subjects	577
EEA total number of subjects	577

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	530
From 65 to 84 years	46
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 577 subjects were screened for eligibility. Of these, 77 subjects were not randomised, 2 subjects were randomised but did not take any dose of IMP

Pre-assignment period milestones

Number of subjects started	577
----------------------------	-----

Number of subjects completed	498
------------------------------	-----

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Adverse event, non-fatal: 1
Reason: Number of subjects	Consent withdrawn by subject: 13
Reason: Number of subjects	In-Exclusion criteria not fulfilled: 53
Reason: Number of subjects	Lost to Follow-Up: 1
Reason: Number of subjects	Other: 9
Reason: Number of subjects	Randomised without intake of IMP: 2

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Silexan 80 mg

Arm description:

1 x 1 capsule with a daily total of 80 mg Silexan (WS® 1265) and 1 x 1 capsule Sertraline placebo/day

Arm type	Experimental
Investigational medicinal product name	Silexan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

1 x 1 capsule Silexan + 1 x 1 capsule Sertraline placebo

Arm title	Sertraline 50 mg
-----------	------------------

Arm description:

1 x 1 capsule with a daily total of 50 mg Sertraline and 1 x 1 capsule Silexan placebo/day

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Sertraline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

1 x 1 capsule Sertraline + 1 x 1 capsule Silexan placebo

Arm title	Placebo
------------------	---------

Arm description:

1 x 1 capsule Silexan placebo and 1 x 1 capsule Sertraline placebo/day

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

1 x 1 capsule Silexan placebo and 1 x 1 capsule Sertraline placebo

Number of subjects in period 1^[1]	Silexan 80 mg	Sertraline 50 mg	Placebo
Started	170	171	157
Completed	154	151	141
Not completed	16	20	16
Consent withdrawn by subject	1	3	3
Adverse event, non-fatal	8	10	5
Other	4	2	2
Lost to Follow-Up	1	3	4
In-Exclusion criteria not fulfilled	-	-	2
Lack of efficacy	2	2	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Two subjects of the Placebo-group were randomised but did not take any dose of the IMP

least squares mean (confidence interval 95%)	-5.42 (-6.05 to -4.79)	-4.18 (-4.83 to -3.53)		

Statistical analyses

Statistical analysis title	ANCOVA
----------------------------	--------

Statistical analysis description:

ANCOVA model including the baseline value as a covariate and factors for trial site and treatment
Full Analysis Set based on multiple imputations with n=100

Comparison groups	Sertraline 50 mg v Placebo
-------------------	----------------------------

Number of subjects included in analysis	328
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0057 ^[24]
Method	ANCOVA
Parameter estimate	Mean difference (final values)
Point estimate	-1.24
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.12
upper limit	-0.36

Notes:

[24] - two-sided

Secondary: Change from Baseline in Beck depression inventory (BDI-II) total score - Silexan and Placebo

End point title	Change from Baseline in Beck depression inventory (BDI-II) total score - Silexan and Placebo ^[25]
-----------------	--

End point description:

Beck depression inventory (BDI-II) total score change from baseline to week 8 (Comparison between Silexan and Placebo)

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline and Week 8

Notes:

[25] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Pairwise comparisons between active treatment groups and placebo are presented

End point values	Silexan 80 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	170	157		
Units: Points				
least squares mean (confidence interval 95%)	-10.06 (-11.36 to -8.76)	-8.48 (-9.82 to -7.13)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 March 2021	Reduction of the number of German trial sites that participate in the trial and adjusting of the maximal number of patients that should be recruited by a single site. Reference document for the assessment of the expectedness of an adverse event was set to the current version of the Fachinformation for Lasea®. Positive German ethics committee vote: 07. May 2021 / Approval of the German competent authority: 13. April 2021.
18 October 2021	Adapting of timelines due to slower recruitment during corona pandemic and the actions that might be taken in case of a new lockdown, taking in consideration the EMA Guidance on the Management of Clinical Trials during the Covid-19 (Coronavirus) pandemic (Version 4 from 04.02.2021). Change of project leader of the sponsor. Change to a multinational clinical trial by additional participation of Polish centres, involvement of a second contract research organisation to conduct the trial in Poland, and adaptation of the maximum number of patients per site. Including a section 'Regional Variability'. Randomisation process was described for Poland. Updating the expected percentage for an intercurrent event to take into account the greater number of patients discontinuing treatment due to an adverse event, which was found after analysing about 100 randomised patients. Subgroup analysis by country was added. Positive German ethics committee vote: 15. December 2021 / Approval of the German competent authority: 30. November 2021. This amended protocol version was also submitted in Poland: positive Polish ethics committee vote: 18. January 2022 / Approval of the Polish competent authority: 01. May 2022.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
