Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002501-PIP01-18
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 February 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 January 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- To evaluate the safety of BIVV001 in previously treated pediatric subjects with hemophilia A.

Protection of trial subjects:

The study was conducted by investigators experienced in the treatment of paediatric patients. The parent(s) or guardian(s) as well as the children were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time. In addition to the consent form for the parent(s)/guardian(s), an assent form in child-appropriate language was provided and explained to the child. Repeated invasive procedures were minimised. The number of blood samples as well as the amount of blood drawn were adjusted according to age and weight. A topical anesthesia may have been used to minimise distress and discomfort.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 February 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Worldwide total number of subjects	74
EEA total number of subjects	22

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	2
Children (2-11 years)	72
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study was conducted at 40 active sites in 15 countries. A total of 79 pediatric subjects were screened between 19 February 2021 to 09 February 2022, of which 5 had screen failure due to not meeting the eligibility criteria.

Pre-assignment

Screening details:

The study comprised of 2 age cohorts of children with severe hemophilia A: less than (<) 6 years and 6 to <12 years. A total of 74 subjects were enrolled in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	BIVV001: Subjects aged <6 Years

Arm description:

Subjects aged <6 years received BIVV001 at a dose of 50 international units per kilogram (IU/kg) intravenous (IV) injection once-weekly (QW) prophylaxis for 52 weeks.

Arm type	Experimental
Investigational medicinal product name	Efanesoctocog alfa
Investigational medicinal product code	BIVV001
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

BIVV001 50 IU/kg, IV injection QW for up to 52 weeks.

Arm title	BIVV001: Subjects aged 6 to <12 Years
------------------	---------------------------------------

Arm description:

Subjects aged 6 to <12 years received BIVV001 at a dose of 50 IU/kg IV injection QW prophylaxis for 52 weeks.

Arm type	Experimental
Investigational medicinal product name	Efanesoctocog alfa
Investigational medicinal product code	BIVV001
Other name

End points

End points reporting groups

Reporting group title	BIVV001: Subjects aged <6 Years
Reporting group description: Subjects aged <6 years received BIVV001 at a dose of 50 international units per kilogram (IU/kg) intravenous (IV) injection once-weekly (QW) prophylaxis for 52 weeks.	
Reporting group title	BIVV001: Subjects aged 6 to <12 Years
Reporting group description: Subjects aged 6 to <12 years received BIVV001 at a dose of 50 IU/kg IV injection QW prophylaxis for 52 weeks.	
Subject analysis set title	Subjects With Major Surgery
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects from any arm (BIVV001: subjects aged <6 Years or BIVV001: subjects aged 6 to <12 Years) who had at least 6 days of exposure to BIVV001 and a negative inhibitor test within 4 weeks prior to surgery and underwent major surgery (defined as any invasive operative procedure that required any of the following: opening into a major body cavity [e.g., abdomen, thorax, skull]; operation on a joint; removal of an organ; dental extraction of any molar teeth or greater than or equal to (\geq) 3 non-molar teeth; operative alteration of normal anatomy; crossing of a mesenchymal barrier [e.g., pleura, peritoneum, dura]) after the first dose of study drug during the study.	
Subject analysis set title	BIVV001 (Efanesoctocog Alfa)
Subject analysis set type	Full analysis
Subject analysis set description: All subjects who were enrolled in study and received BIVV001 in either Arm 'BIVV001: subjects aged <6 years' or 'BIVV001: subjects aged 6 to <12 years'.	

Primary: Number of Subjects With Neutralising Antibodies (Development of Inhibitors) Directed Against Factor VIII

End point title	Number of Subjects With Neutralising Antibodies (Development of Inhibitors) Directed Against Factor VIII ^[1]
End point description: Inhibitor development was defined as an inhibitor result of greater than or equal to (≥ 0.6) Bethesda units (BU/mL) that was confirmed by a second test result from a separate sample, drawn 2 to 4 weeks following the date when the original sample was drawn. Both tests must have been performed by the central laboratory using the Nijmegen modified Bethesda assay. Analysis was performed on safety analysis set which included all subjects who took at least 1 dose of study intervention.	
End point type	Primary
End point timeframe: Baseline up to Week 52	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was provided.

Secondary: Annualised Bleeding Rate (ABR): For Treated Bleeds

End point title	Annualised Bleeding Rate (ABR): For Treated Bleeds
-----------------	--

End point description:

ABR: annualised number of treated bleeding episodes (BE) per subject per year. $ABR = \text{number of treated BE during efficacy period (EP)} / \text{total number of days during EP} \times 365.25$. Treated BE: any occurrence of hemorrhage required administration of BIVV001. It started from 1st sign of bleed and ended no more than 72 hours after last injection to treat BE, any subsequent bleeding at same location/injections administered less than or equal to (\leq) 72 hours apart from previous injection were considered same BE. Any injection after >72 hours post preceding one=considered 1st injection to treat new BE in same location. Any bleed at different location: considered as separate BE, regardless of time from last injection. EP=sum of all intervals of time during which subjects were treated with BIVV001 according to study arms and treatment regimens. ABR: by negative binomial model with total number of treated BE during EP as response variable and log-transformed EP duration (years) as offset variable. FAS.

End point description:

A bleeding episode was defined as an episode that started from 1st sign of bleed and ended no more than 72 hours after last injection to treat bleeding episode, any subsequent bleeding at same location or injections administered ≤ 72 hours apart from previous injection were considered same bleeding episode. Any injection to treat bleed, taken >72 hours after preceding one, was considered 1st injection to treat new BE in same location. Any bleed at different location: considered as separate BE, regardless of time from last injection. Percentage of bleeding episodes (of all bleeding episodes occurred) which were treated with single injection was reported in this endpoint. Analysis was performed on FAS. Here, number of subjects analysed = subjects with available data for this endpoint.

Secondary: Number of Blood Component Transfusions Used During Perioperative Period for Major Surgery

End point title	Number of Blood Component Transfusions Used During Perioperative Period for Major Surgery
-----------------	---

End point description:

The perioperative period was the time lapse surrounding the surgical act which was divided into 3 stages: preoperative (4 weeks prior to surgery), operative (during the surgery) and post-operative (24-hour post-surgery). The number of blood component transfusions used during perioperative period were summarised categorically (0, 1, 2, 3 and >3) for all major surgeries for the surgery subgroup. Major surgery: defined as any invasive operative procedure that required any of the following: opening into major body cavity (e.g., abdomen, thorax, skull); operation on a joint; removal of an organ; dental extraction of any molar teeth or ≥ 3 non-molar teeth; operative alteration of normal anatomy; crossing of a mesenchymal barrier (e.g., pleura, peritoneum, dura). Analysis was performed on surgery subgroup population. Number of subjects analysed = subjects with major surgeries during specified period.

End point type	Secondary
----------------	-----------

End point timeframe:

During the perioperative period (any time during Baseline up to Week 52)

Secondary: Type of Blood Component Transfusions Used During Perioperative Period for Major Surgery

End point title	Type of Blood Component Transfusions Used During Perioperative Period for Major Surgery
-----------------	---

End point description:

The perioperative period was the time lapse surrounding the surgical act which was divided into 3 stages: preoperative (4 weeks prior to surgery), operative (during the surgery) and post-operative (24-hour post-surgery). The type of blood component (Red blood cell, platelet, fresh frozen plasma, whole blood and other) transfusions used were summarised for all major surgeries. Post-operative referred to the day following the end of surgery to the date of hospital discharge. Major surgery: defined as any invasive operative procedure that required any of the following: opening into major body cavity (e.g., abdomen, thorax, skull); operation on a joint; removal of an organ; dental extraction of any molar teeth or ≥3 non-molar teeth; operative alteration of normal anatomy; crossing of a mesenchymal barrier (e.g., pleura, peritoneum, dura). Analysis was performed on surgery subgroup population. Number of subjects analysed = subjects with major surgeries during specified period.

Secondary: Total Dose Required to Maintain Hemostasis From Day -1 to Day 0 During Perioperative Period for Major Surgery

End point title	Total Dose Required to Maintain Hemostasis From Day -1 to Day 0 During Perioperative Period for Major Surgery
-----------------	---

End point description:

Perioperative period was time lapse surrounding surgical act which was divided into 3 stages: preoperative (4 weeks prior to surgery), operative (during surgery) and post-operative (24-hour post-surgery). Total dose (IU/kg) was sum across all injections per major surgery (including loading dose) needed to maintain hemostasis (process to prevent and stop bleeding from blood vessel) during surgery. Major surgery: defined as any invasive operative procedure that required any of the following: opening into major body cavity (e.g., abdomen, thorax, skull); operation on joint; removal of organ; dental extraction of any molar teeth or ≥ 3 non-molar teeth; operative alteration of normal anatomy; crossing of mesenchymal barrier (e.g., pleura, peritoneum, dura). Day 0=surgery day. Loading dose for given surgery was preoperative injection, administered either on day of surgery or one day prior to surgery (i.e., Day -1). Surgery subgroup population. Number of subjects analysed=subjects with data.

End point type	Secondary
----------------	-----------

End point timeframe:

Day -1 to Day 0 (day of surgery)

Secondary: Estimated Blood Loss During Major Surgery

End point title	Estimated Blood Loss During Major Surgery
-----------------	---

End point description:

The estimated total blood loss (in millilitres) during major surgeries were summarised. Major surgery: defined as any invasive operative procedure that required any of the following: opening into major body cavity (e.g., abdomen, thorax, skull); operation on a joint; removal of an organ; dental extraction of any molar teeth or ≥ 3 non-molar teeth; operative alteration of normal anatomy; crossing of a mesenchymal barrier (e.g., pleura, peritoneum, dura). Analysis was performed on surgery subgroup population. Here, number of subjects analysed = subjects with reported blood loss during major surgery.

End point type	Secondary
End point timeframe:	
Day 0 (i.e., day of surgery)	

End point values	Subjects With Major Surgery			
Subject group type	Subject analysis set			
Number of subjects analysed	2 ^[27]			
Units: millilitres				
arithmetic mean (standard deviation)	25.00 (± 35.36)			

Notes:

[27] - Major surgeries with blood loss = 2

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Subjects With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse

End point title	Number of Subjects With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse
-----------------	--

End point description:

An adverse event (AE) was defined as any untoward medical occurrence in a subject who received study drug which did not necessarily have a causal relationship with the treatment. A serious AE (SAE) was defined as any untoward medical occurrence that at any dose: resulted in death, was life-threatening, required inpatient hospitalisation or prolongation of existing hospitalisation, resulted in persistent or significant disability or incapacity, was a congenital anomaly or birth defect, or was a medically important event. Treatment-emergent AEs were AEs that developed, worsened or became serious from Baseline (Day 1) up to 3 weeks post last dose.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline (Day 1) up to 3 weeks post last dose of BIVV001 (i.e., up to Week 55)
