

Clinical trial results:

Phase Ib/II, open label study of sabatolimab as a treatment for patients with acute myeloid leukemia and presence of measurable residual disease after allogeneic stem cell transplantation.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results.

Please use <https://www.novctrd.com> for complete trial results.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 August 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	22 August 2024
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

For adults only (from the safety run-in part): To determine whether sabatolimab as monotherapy at the two tested dose levels (400 mg and 800 mg Q4W) leads to an unacceptable level of toxicity when administered to adult participants with AML who are in complete remission but are MRD+ post-aHSCT.

For adults only (from both safety run-in and expansion parts): To evaluate preliminary efficacy of sabatolimab (at the recommended dose level for expansion) as monotherapy and in combination with azacitidine on prevention of hematologic relapse by assessing the proportion of adult participants with AML and MRD+ post-aHSCT,) who remain with no evidence of hematologic relapse after 6 cycles of study treatment.

For adolescents only: To determine whether sabatolimab as monotherapy at the recommended dose level for adults leads to an unacceptable level of toxicity when administered to adolescent participants with AML who are in complete remission but are MRD+ post-aHSCT.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 September 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 8

Country: Number of subjects enrolled	Italy: 10
Country: Number of subjects enrolled	Spain: 3
Worldwide total number of subjects	24
EEA total number of subjects	24

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	16
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 24 participants were enrolled in this study: 21 in Safety run-in sabatolimab monotherapy and 3 in Expansion part.

Pre-assignment

Screening details:

Due to the recruitment halt by Novartis, recruitment in the expansion phase was not completed.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Sabatolimab 400mg mono adults

Arm description:

Safety run-in cohort: Adult participants in this arm received sabatolimab 400mg only.

Arm type	Experimental
Investigational medicinal product name	Sabatolimab
Investigational medicinal product code	MBG453
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

sabatolimab 400 mg/4ml (MBG453 400 mg liquid in vial 4 ml)

Arm title	Sabatolimab 800mg mono adults
------------------	-------------------------------

Arm description:

Safety run-in cohort: Adult participants in this arm received sabatolimab 800mg only.

Arm type	Experimental
Investigational medicinal product name	Sabatolimab
Investigational medicinal product code	MBG453
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

sabatolimab 800 mg/4ml (MBG453 400 mg liquid in vial 4 ml)

Arm title	Sabatolimab 800mg + Azacitidine adults
------------------	--

Arm description:

Expansion cohort: Adult participants in this arm received sabatolimab 800 mg + azacitidine combination.

Arm type	Experimental
Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details: azacitidine 100 mg (azacitidine 100 mg lyophilizate in vial)	
Investigational medicinal product name	Sabatolimab
Investigational medicinal product code	MBG453
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details: sabatolimab 800 mg/4ml (MBG453 400 mg liquid in vial 4 ml)	
Arm title	Sabatolimab 800mg mono adolescent

Arm description:

Adolescent safety cohort: ≥ 12 to < 18 -year-old adolescent participants in this arm received sabatolimab 800mg only.

Arm type	Experimental
Investigational medicinal product name	Sabatolimab
Investigational medicinal product code	MBG453
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

sabatolimab 800 mg/4ml (MBG453 400 mg liquid in vial 4 ml)

Primary: Rate of dose limiting toxicities (Safety Run-in in adult sabatolimab 400mg & 800mg only)

End point title	Rate of dose limiting toxicities (Safety Run-in in adult sabatolimab 400mg & 800mg only) ^{[1][2]}
End point description:	
Assessment of tolerability of sabatolimab in adults and adolescents in the post allogenic stem cell transplantation setting. This was determined by the number of participants with at least one event - All grades. A dose-limiting toxicity (DLT) is defined as an adverse event or abnormal laboratory value considered by the Investigator to be at least possibly related to sabatolimab as a single contributor that occurs during the DLT observation period and meets the severity criteria as per protocol.	
End point type	Primary
End point timeframe:	
From Cycle 1 Day 1 to end of Cycle 2; Cycle =28 Days	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical test for this endpoint

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No formal statistical test for this endpoint

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events and deaths are described from the start of treatment up to 30 days after the last dose of treatment for a max. approx. 25 months

Adverse event reporting additional description:

An Adverse Event is any sign or symptom occurring during a trial and safety follow-up. Death data covers all enrolled patients, while Adverse Event data was reported from those receiving at least one study drug dose.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 April 2021	Amendment #1: <ul style="list-style-type: none">- In response to a request from health authorities, the list of inclusion and exclusion criteria was revised. The modification includes the addition of required minimum hemoglobin level, as well as restrictions for prior cancer-directed treatment or investigational modalities and for patient with BCR-ABL mutations eligible for post-transplant tyrosine kinase inhibitor therapies;- Clarification was provided on the dose used in cohorts 3-5, to define DLTs and dose modifications handling for sabatolimab by the request of health authorities;- Revisions were made to the visit schedule assessments tables to add/correct the visit windows. additionally, amendment was implemented to differentiate the collection of antineoplastic therapies/medications since discontinuation which was previously included in collection concomitant medication and therapies;- Changes included removal of immunogenicity (IG) sample collection after sabatolimab post-infusion at Cycle 24, as pre-infusion collected sample at this visit was sufficient.
24 March 2022	Amendment #2: <ul style="list-style-type: none">- The restrictive list of inclusion and exclusion criteria was modified per feedback provided by the Principal Investigators to increase the recruitment rate. These changes did not substantially impact the study design or the primary objectives, which included safety and preliminary efficacy assessments. An amended protocol was implemented to include the determination of eligibility for enrollment based on central MRD assay. These modifications allowed for a more comprehensive assessment of patient eligibility during the course of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results.
Please use <https://www.novctrd.com> for complete trial results.

Notes:
