

Clinical trial results:

A Phase IIa Randomised, Double Blind, Multi-centre Study to Assess the Effect on Glucose Homeostasis of Two Dose Levels of AZD9567, Compared to Prednisolone, in Adults with Type 2 Diabetes

Summary

EudraCT number	2020-000931-35
Trial protocol	DE
Global end of trial date	09 June 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 August 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 June 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the pharmacodynamic effect of AZD9567 on glucose homeostasis compared to prednisolone.

Protection of trial subjects:

This study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with International Council for Harmonisation Good Clinical Practices (ICH-GCP), applicable regulatory requirements, and the AstraZeneca policy on Bioethics.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 November 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 46
Worldwide total number of subjects	46
EEA total number of subjects	46

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	30
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This cross-over study was conducted in Germany between 26 November 2020 and 09 June 2021.

Pre-assignment

Screening details:

The Screening period was of 14 days which may be extended up to a maximum of 28 days. Informed consent was obtained from all patients before performing any study tests or procedures. All the study assessments were performed as per the schedule of assessment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1

Arm description:

Patients were randomised in a ratio of 1:1 to receive 72 mg AZD9567 followed by 40 mg prednisolone or 40 mg prednisolone followed by 72 mg AZD956

Arm type	Experimental
Investigational medicinal product name	Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Patients received Prednisolone 40 mg/day for 3 consecutive days (Day 1 to 3) of each treatment period

Investigational medicinal product name	AZD9567
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Patients received AZD9567 72 mg/day for 3 consecutive days (Day 1 to 3) of each treatment period.

Arm title	Cohort 2
------------------	----------

Arm description:

Patients were randomised in a ratio of 1:1 to receive 40 mg AZD9567 followed by 20 mg prednisolone or 20 mg prednisolone followed by 40 mg AZD9567

Arm type	Experimental
Investigational medicinal product name	AZD9567
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Patients received AZD9567 40 mg/day for 3 consecutive days (Day 1 to 3) of each treatment period

Investigational medicinal product name	Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Patients received Prednisolone 20 mg/day for 3 consecutive days (Day 1 to 3) of each treatment period

Arm title	Cohort 3
------------------	----------

Arm description:

Patients were randomised in a ratio of 1:1 to receive placebo followed by 5 mg prednisolone or 5 mg prednisolone followed by placebo

Arm type	Placebo
Investigational medicinal product name	Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Patients received Prednisolone 5 mg/day for 3 consecutive days (Day 1 to 3) of each treatment period

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Patients received Placebo for 3 consecutive days (Day 1 to 3) of each treatment period

Number of subjects in period 1	Cohort 1	Cohort 2	Cohort 3
Started	28	9	9
Completed	27	8	9
Not completed	1	1	0

Primary: Change from baseline in glucose area under the plasma concentration versus time curve from zero to 4 hours post-dose AUC(0-4)

End point title	Change from baseline in glucose area under the plasma concentration versus time curve from zero to 4 hours post-dose AUC(0-4)
-----------------	---

End point description:

The change from baseline in glucose AUC(0-4) was analysed to determine the Pharmacodynamic (PD) effect of AZD9567 compared to Prednisolone following a standardised Mixed meal tolerance test (MMTT).

The Subject Analysis set was added to report statistical analysis and this is the only option available in order to accommodate reporting of statistical data for cross over cohorts.

Here, arbitrary value 9999.9999 represent not applicable.

Full Analysis Set (FAS) consisted of all randomised patients who received at least 1 dose of study treatment.

Secondary: Homeostatic model assessment- insulin resistance (HOMA-IR)

End point title | Homeostatic model assessment- insulin resistance (HOMA-IR)

End point description:

The HOMA-IR was calculated based on glucose and insulin measured prior to MMTT.

$HOMA-IR = \text{Glucose (mmol/L)} \times \text{Insulin (mU/L)} / 22.5$

HOMA-IR score estimates the degree of insulin resistance.

Higher range indicates greater insulin resistance (i.e. high diabetes risk), while lower range indicates insulin sensitivity (i.e. low diabetes risk)

Here, arbitrary value 9999.9999 represent not applicable.

FAS consisted of all randomised patients who received at least 1 dose of study treatment.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Arbitrary value 9999.9999 represent not applicable due to Placebo/AZD9567 was not administered in that cohort.
For Outcome measure MMTT derived first phase insulin response (I10/G10]), in cohort 2, convergence was not met thus no data was available.

Notes:
