

Clinical trial results:

A Double-blind, Randomized, Active-controlled, Parallel Group, Phase 3 Study to Compare Efficacy and Safety of CT-P39 and Xolair in Patients With Chronic Spontaneous Urticaria Who Remain Symptomatic despite H1-antihistamine Treatment

Summary

EudraCT number	2020-000952-36
Trial protocol	HU PL BG GR
Global end of trial date	11 September 2023

Results information

Result version number	v1 (current)
This version publication date	30 October 2024
First version publication date	30 October 2024

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 September 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 September 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the equivalence of CT P39 to Xolair at a dose of 300 mg in terms of efficacy in patients with chronic spontaneous urticaria (CSU) as determined by change from baseline in weekly itch severity score (ISS7) at Week 12

Protection of trial subjects:

The study was conducted according to the protocol and in compliance with the International Council for Harmonisation (ICH) E6(R2) with the Declaration of Helsinki (World Medical Association, 2013). The Investigator conducted all aspects of this study in accordance with all national, state, and local laws or regulations.

An informed consent document approved by each study site's IEC/IRB was signed by the patient/legal guardian after the Investigator assured that the patient/legal guardian understands the implications of participating in the study. The authorized person obtained the informed consent before the patient entered in the study.

Patients aged 12 to 17 years (both inclusive) provided their consent on adolescent assent form and the consent was also taken by their parent/legal guardian. Patients aged ≥ 18 years provided their consent on adult ICF.

Background therapy:

All patients continued to concomitantly receive an approved dose of non-sedating H1-antihistamine treatment throughout the study.

Evidence for comparator: -

Actual start date of recruitment	13 November 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 262
Country: Number of subjects enrolled	Bulgaria: 125
Country: Number of subjects enrolled	Greece: 6
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Korea, Republic of: 119
Country: Number of subjects enrolled	Ukraine: 101
Worldwide total number of subjects	619
EEA total number of subjects	399

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	12
Adults (18-64 years)	569
From 65 to 84 years	38
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

First patient assigned to treatment date was on 09 December 2020.

A total of 783 patients were screened from 64 study centers in 6 countries (Bulgaria, Greece, Hungary, Poland, South Korea, and Ukraine) and 634 patients were enrolled from 62 study centers in this study.

Pre-assignment

Screening details:

Male or female patients with a history of at least 6 months of CSU who had hives and itching for 6 consecutive weeks or more despite current use of H1-antihistamines for this time period were enrolled in the study if they had met all of the inclusion criteria and none of the exclusion criteria.

Pre-assignment period milestones

Number of subjects started	783 ^[1]
Number of subjects completed	619

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 42
Reason: Number of subjects	Inclusion/Exclusion criteria not met: 83
Reason: Number of subjects	Other: 24
Reason: Number of subjects	GCP noncompliant site: 15

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 783 patients were screened and 634 were enrolled, of which 15 patients were excluded from all analyses due to the site being non-GCP compliant

Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

To minimize the risk of unblinding, the study drug was administered by pre-defined unblinded site personnel. The unblinded sponsor and CRO personnel responsible for the randomization or administration of study drugs were pre-defined and were not permitted to conduct any patient assessments. Also, to maintain the study blind with respect to the 2-dose levels (300 mg versus 150 mg), patients who received one (150 mg) injection of study drug, also received additional placebo.

Arms

Are arms mutually exclusive?	Yes
Arm title	CT-P39 300 mg

Arm description:

CT-P39 300 mg every 4 weeks in Treatment Period 1 (TP1) (Weeks 0, 4, 8)

Arm type	Experimental
Investigational medicinal product name	CT-P39
Investigational medicinal product code	
Other name	omalizumab, Omlyclo
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:
300 mg injected subcutaneously every 4 weeks

Arm title	Xolair 300 mg
------------------	---------------

Arm description:

Xolair 300 mg every 4 weeks in Treatment Period 1 (TP1) (Weeks 0, 4, 8)

Arm type	Active comparator
Investigational medicinal product name	Xolair
Investigational medicinal product code	
Other name	omalizumab
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

300 mg injected subcutaneously every 4 weeks

Arm title	CT-P39 150 mg
------------------	---------------

Arm description:

CT-P39 150 mg every 4 weeks in Treatment Period 1 (TP1) (Weeks 0, 4, 8)

Arm type	Experimental
Investigational medicinal product name	CT-P39
Investigational medicinal product code	
Other name	omalizumab, Omlyclo
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

150 mg injected subcutaneously every 4 weeks

Arm title	Xolair 150 mg
------------------	---------------

Arm description:

Xolair 150 mg every 4 weeks in Treatment Period 1 (TP1) (Weeks 0, 4, 8)

Arm type	Active comparator
Investigational medicinal product name	Xolair
Investigational medicinal product code	
Other name	omalizumab
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

150 mg injected subcutaneously every 4 weeks

Period 2

Period 2 title	Treatment Period 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

To minimize the risk of unblinding, the study drug was administered by pre-defined unblinded site personnel. The unblinded sponsor and CRO personnel responsible for the randomization or administration of study drugs were pre-defined and were not permitted to conduct any patient assessments.

Arms

Are arms mutually exclusive?	Yes
Arm title	CT-P39 300 mg maintenance

Arm description:

Received CT-P39 300 mg in TP1 and continued on CT-P39 300 mg in TP2 (Week 12, 16, 20)

Arm type	Experimental
Investigational medicinal product name	CT-P39
Investigational medicinal product code	
Other name	omalizumab, Omlyclo
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

300 mg injected subcutaneously every 4 weeks

Arm title	Switched to CT-P39 300 mg
Arm description:	
Received Xolair 300 mg in TP1 and re-randomized to receive CT-P39 300 mg in TP2 (Week 12, 16, 20)	
Arm type	Experimental
Investigational medicinal product name	CT-P39
Investigational medicinal product code	
Other name	omalizumab, Omlyclo
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details:	
300 mg injected subcutaneously every 4 weeks	
Arm title	Xolair 300 mg maintenance
Arm description:	
Received Xolair 300 mg in TP1 and re-randomized to continue on Xolair 300 mg in TP2 (Week 12, 16, 20)	
Arm type	Active comparator
Investigational medicinal product name	Xolair
Investigational medicinal product code	
Other name	omalizumab
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details:	
300 mg injected subcutaneously every 4 weeks	
Arm title	CT-P39 Dose increased
Arm description:	
Received CT-P39 150 mg in TP1 and dose increased from 150 mg to 300 mg from Week 12; CT-P39 300 mg in TP2 (Week 12, 16, 20)	
Arm type	Experimental
Investigational medicinal product name	CT-P39
Investigational medicinal product code	
Other name	omalizumab, Omlyclo
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details:	
300 mg injected subcutaneously every 4 weeks	
Arm title	Xolair Dose increased
Arm description:	
Received Xolair 150 mg in TP1 and dose increased from 150 mg to 300 mg from Week 12; Xolair 300 mg in TP2 (Week 12, 16, 20)	
Arm type	Active comparator
Investigational medicinal product name	Xolair
Investigational medicinal product code	
Other name	omalizumab
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details:	
300 mg injected subcutaneously every 4 weeks

Period 3

Period 3 title	Follow up period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

No treatment was administered during the Follow up Period

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Follow up Period: CT-P39 300 mg Maintenance
Arm description: Patients who were in the CT-P39 300 mg arm in TP1 and continued on CT-P39 300 mg during TP2 (Weeks 12, 16, 20) and entered the Follow up Period.	
Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Follow up Period: Switched to CT-P39 300 mg
Arm description: Received Xolair 300 mg in TP1 and re-randomized to CT-P39 300 mg in TP2 (Weeks 12, 16, 20) and entered the Follow up Period	
Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Follow up Period: Xolair 300 mg maintenance
Arm description: Received Xolair 300 mg in TP1 and re-randomized to continue on Xolair 300 mg in TP2 (Weeks 12, 16, 20) and entered the Follow up Period	
Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Follow up Period: CT-P39 Dose increased
Arm description: Received CT-P39 150 mg in TP1 and dose increased from 150 mg to 300 mg from Week 12; CT-P39 300 mg in TP2 (Week 12, 16, 20) and entered the Follow up Period	
Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Follow up Period: Xolair Dose increased
Arm description: Received Xolair 150 mg in TP1 and dose increased from 150 mg to 300 mg from Week 12; Xolair 300 mg in TP2 (Week 12, 16, 20) and entered the Follow up Period	
Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 3^[2]	Follow up Period: CT-P39 300 mg Maintenance	Follow up Period: Switched to CT-P39 300 mg	Follow up Period: Xolair 300 mg maintenance
Started	180	90	92
Completed	170	84	86
Not completed	10	6	6
Consent withdrawn by subject	4	-	4
Physician decision	2	1	1
Other	4	5	-
Lost to follow-up	-	-	1

Number of subjects in period 3^[2]	Follow up Period: CT-P39 Dose increased	Follow up Period: Xolair Dose increased
Started	97	90
Completed	90	83
Not completed	7	7

Consent withdrawn by subject	2	4
Physician decision	-	-
Other	4	3
Lost to follow-up	1	-

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Some patients were withdrawn from treatment but continued with the study assessments (they were withdrawn from treatment but not terminated from the study)

Primary: Change from Baseline in Weekly Itch Severity Score (ISS7) at Week 12

End point title	Change from Baseline in Weekly Itch Severity Score (ISS7) at Week 12 ^[1]
-----------------	---

End point description:

The primary efficacy evaluation is to compare mean change from baseline in ISS7 of 300 mg of CT-P39 and 300 mg of Xolair at Week 12, calculated as ISS7 at Week 12 minus the baseline ISS7. The statistical analysis of mean change from baseline in ISS7 at Week 12 between CT-P39 300 mg arm and Xolair 300 mg arm using analysis of covariance (ANCOVA) was conducted. The ANCOVA model included the treatment group as a fixed effect and baseline ISS7, body weight on Day 1 and country as covariates.

End point type	Primary
----------------	---------

End point timeframe:

Week 12

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only the CT-P39 300 mg and Xolair 300 mg arms in Treatment Period 1 were included in the primary efficacy endpoint.

End point values	CT-P39 300 mg	Xolair 300 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	186	192		
Units: score				
least squares mean (standard error)	-9.21 (± 0.796)	-9.98 (± 0.798)		

Statistical analyses

Statistical analysis title	Primary efficacy: Estimate of treatment difference
----------------------------	--

Statistical analysis description:

The primary efficacy evaluation was comparison of mean change from baseline in ISS7 of 300 mg of CT-P39 (Arm 1) and 300 mg of Xolair (Arm 2) at Week 12, calculated as ISS7 at Week 12 minus the baseline ISS7. The analysis was conducted by analysis of covariance (ANCOVA). The ANCOVA model included the treatment group as a fixed effect and baseline ISS7, body weight on Day 1 and country as covariates.

Comparison groups	CT-P39 300 mg v Xolair 300 mg
Number of subjects included in analysis	378
Analysis specification	Pre-specified
Analysis type	equivalence ^[2]
Method	ANCOVA
Parameter estimate	Treatment difference
Point estimate	0.77
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.37
upper limit	1.9

Notes:

[2] - For the demonstration of efficacy, point estimate and 95% CI for the difference in the mean change from baseline in ISS7 at Week 12 between CT-P39 (300 mg) and Xolair (300 mg) will be computed. Therapeutic equivalence will be concluded if the 95% CI for the treatment difference is

Secondary: Relative Potency of CT-P39 compared with Xolair

End point title	Relative Potency of CT-P39 compared with Xolair
End point description:	
<p>The relative potency of CT-P39 to Xolair was defined as the ratio of equally effective dose of CT-P39 relative to that of Xolair. The therapeutic response was estimated by the change from baseline in ISS7 at Week 12. Since the 2 treatments were compared at the same 2-dose levels (300 mg and 150 mg), a 4-point assay was to be used to calculate the relative potency and its CI.</p> <p>Log dose-therapeutic response curves for each treatment group was to be estimated by linear regression. The change from baseline in ISS7 at Week 12 and dose in the log scale were to be considered as a response variable and independent variable respectively. The baseline ISS7, body weight and country were to be included in a model as covariates. The log relative potency was estimated as the ratio between the estimate of the overall product effect and the estimate of the common slope of log dose. The overall product effect was defined as the difference in response between treatment groups (y-intercepts difference).</p>	
End point type	Secondary

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 August 2020	<ul style="list-style-type: none">• A secondary efficacy endpoint 'Change from baseline in number of tablets/week of rescue therapy at Weeks 8, 12, and 24' was added to address a possible imbalance in rescue therapy use between the treatment arms.• A patient was allowed to take additional H1-antihistamine in case a patient discontinued the study drug during the study treatment periods.• A patient had to return to the study center by regular scheduled time intervals even if a patient discontinued the study drug during the treatment period to apply treatment policy estimand.• The following statement "Back-up samples for PK, immunogenicity, and free IgE will be retained at the central laboratory as a back-up and blood samples for free IgE assessments can be used for additional analysis for either free or total IgE" was added.• History of and/or concomitant myocardial infarction' was added to exclusion criteria considering myocardial infarction is specified as contraindications in Korea Ministry Food and Drug Safety label.
03 September 2020	<ul style="list-style-type: none">• Details of analytical facilities was referred to the ICF instead of containing those details in the protocol. This change was done to prevent the protocol to be amended each time laboratory information is updated.
04 November 2020	<ul style="list-style-type: none">• Immunogenicity timepoint was added to Weeks 4, 8, 16, and 20 to reflect FDA's comment.• 'Benefits and risk assessment and risk mitigation for COVID-19' was added in accordance with Polish Ministry of Health.• Approval of omalizumab for the treatment of chronic rhinosinusitis with nasal polyps in Europe was updated.
10 August 2021	<ul style="list-style-type: none">• The start time of background medication was changed to at least 3 days before start recording the baseline ISS7 which was the earliest valid efficacy data.• Risk assessment for concomitant use of a COVID-19 vaccine during the study was added.• 'Patient missed at least 1 dose before Week 12' was deleted from the study treatment discontinuation reason.• It was changed to allow the patients who showed positive result of antibody test due to the past hepatitis C infection to be enrolled in the study.• The description of conversion method for calculating rescue medications was added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the global impact of the COVID-19 pandemic, the Sponsor took proactive measures for the safety of participants. Due to the war in Ukraine during the study, increase in protocol deviations was unavoidable and some procedures were changed.
