

Clinical trial results:

A Phase 3, randomized, placebo-controlled clinical study to evaluate the efficacy, immunogenicity and safety of the 9vHPV vaccine in Japanese males, 16 to 26 years of age.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 July 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 December 2023
Global end of trial reached?	Yes
Global end of trial date	23 July 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purposes of this study are to evaluate the efficacy of V503 (9-valent human papillomavirus [9vHPV] vaccine) in preventing human papillomavirus (HPV)-related anogenital persistent infection, and to evaluate the safety/tolerability of V503, in Japanese males who are 16 to 26 years of age. It is hypothesized that administration of a 3-dose regimen of V503 reduces the combined incidence of HPV 6/11/16/18-related anogenital persistent infection, as well as the combined incidence of HPV31/33/45/52/58-related anogenital persistent infection, compared with placebo. The study includes a Base Study to assess efficacy and safety of V503, and an Extension Study.

Participants in the placebo arm of the Base Study will be eligible to receive V503 on Day 1, Month 2, and Month 6 of the Extension Study. Participants in the V503 arm of the Base Study who received less than 3 doses of V503 in the Base Study will be offered the opportunity to complete the 3-dose regimen in the Extension Study.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 November 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	7
Adults (18-64 years)	1052
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were equally randomized to V503 and placebo in the base study to evaluate efficacy, immunogenicity, and safety outcome measures. After the end of the base study, eligible participants could be enrolled in the optional open label study extension.

Pre-assignment

Screening details:

A total of 1059 participants who met the eligibility criteria were randomized in the base study.

Period 1

Period 1 title	Base Study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	V503

Arm description:

In the base study, participants received an intramuscular (IM) injection of V503 at Day 1, Month 2, and Month 6.

Arm type	Experimental
Investigational medicinal product name	V503
Investigational medicinal product code	
Other name	9vHPV vaccine, SILGARD®9, GARDASIL™9
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

9-valent vaccine, HPV6/11/16/18/31/33/45/52/58, L1 virus-like particle (VLP)
30/40/60/40/20/20/20/20mcg per dose.

Arm title	Placebo
------------------	---------

Arm description:

In the base study, participants received an IM injection of placebo at Day 1, Month 2, and Month 6.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.9% sodium chloride (NaCl)

Number of subjects in period 1	V503	Placebo
Started	529	530
Vaccination 1: Day 1	529	530
Vaccination 2: Month 2	523	518
Vaccination 3: Month 6	514	508
Completed	464	472
Not completed	65	58
Consent withdrawn by subject	57	42
Lost to follow-up	8	16

Period 2

Period 2 title	Extension Study
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	V503 Open Label V503 Extension Study

Arm description:

Participants from the V503 arm of the base study who did not complete the 3-dose series received 1 or 2 doses of V503, on Day 1, or Day 1 and Month 4 of the open label extension study.

Arm type	Experimental
Investigational medicinal product name	V503
Investigational medicinal product code	
Other name	9vHPV vaccine, SILGARD®9, GARDASIL™9
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

9-valent vaccine, HPV6/11/16/18/31/33/45/52/58, L1 virus-like particle (VLP)
30/40/60/40/20/20/20/20mcg per dose.

Arm title	Placebo Open Label V503 Extension Study
------------------	---

Arm description:

Participants from the placebo arm of the base study who did not complete the 3-dose series received 3 doses of V503 on Day 1, Month 2 and Month 6 of the open label extension study.

Arm type	Experimental
Investigational medicinal product name	V503
Investigational medicinal product code	
Other name	9vHPV vaccine, SILGARD®9, GARDASIL™9
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

9-valent vaccine, HPV6/11/16/18/31/33/45/52/58, L1 virus-like particle (VLP)
30/40/60/40/20/20/20/20mcg per dose.

Number of subjects in period 2^[1]	V503 Open Label V503 Extension Study	Placebo Open Label V503 Extension Study
Started	2	381
Completed	2	367
Not completed	0	14
Physician decision	-	1
Consent withdrawn by subject	-	10
Lost to follow-up	-	3

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Not all base study participants were enrolled in the extension study because participation in the extension study was optional and participants had to meet certain eligibility criteria.

Baseline characteristics

Reporting groups

Reporting group title	V503
Reporting group description:	
In the base study, participants received an intramuscular (IM) injection of V503 at Day 1, Month 2, and Month 6.	
Reporting group title	Placebo
Reporting group description:	
In the base study, participants received an IM injection of placebo at Day 1, Month 2, and Month 6.	

Reporting group values	V503	Placebo	Total

Unknown or Not Reported	0	0	0
Sexual Orientation Participant Subgroups			
Participant randomization was stratified by sexual orientation heterosexual males (HM) or males who have sex with males (MSM). For HM, participants must be a heterosexual male, who has had exclusively female sexual partners, and has 1 to 5 lifetime female sexual partners at the time of enrollment. For MSM, participants must identify themselves as a male who has sex with males, must have engaged in either anal intercourse or oral sex with another male sexual partner within the last year, and have 0 to 5 lifetime male and/or female sexual partners at the time of enrollment.			
Units: Subjects			
Heterosexual Males (HM)	473	474	947
Males Who Have Sex With Males (MSM)	56	56	112

End points

End points reporting groups

Primary: Combined incidence of HPV 6/11/16/18-related anogenital persistent infection

End point title	Combined incidence of HPV 6/11/16/18-related anogenital persistent infection
End point description: HPV6/11/16/18-related anogenital persistent infection was defined as polymerase chain reaction (PCR) positivity to at least 1 relevant HPV type in anogenital or biopsy samples from at least 2 consecutive visits 6 months (± 1 month visit) or longer apart, or pathology diagnosis of condyloma or penile/perineal/perianal lesions together with PCR detection of at least 1 HPV type in an adjacent section and PCR detection for same HPV type in anogenital sample or biopsy at a separate adjacent visit. Incidence was measured as number of cases/100 person-years. Primary analysis was conducted in the per protocol efficacy (PPE) population including participants who received 3 doses of V503 or placebo in 1 year, had Month 7 swab samples collected postdose 3 with PCR result, were seronegative to relevant HPV type(s) at Day 1 and PCR-negative to relevant HPV type(s) on all samples collected from Day 1 to Month 7, and had no protocol deviations that could interfere with evaluation of vaccine efficacy.

Primary: Number of Participants with Elevated Oral Body Temperature

End point title	Number of Participants with Elevated Oral Body Temperature ^[2]
-----------------	---

End point description:

Participants collected their oral body temperature in the evening of their vaccination day and at the same time each day thereafter for 4 days. The maximum body temperature obtained within 5 days of any of the 3 vaccinations was recorded using the VRC. Per protocol, fever was defined as an oral temperature of $\geq 99.5^{\circ}\text{F}$ (37.5°C). The number of participants who had at least 1 oral body temperature reading that was, $< 99.5^{\circ}\text{F}$ ($< 37.5^{\circ}\text{C}$), $\geq 99.5^{\circ}\text{F}$ ($\geq 37.5^{\circ}\text{C}$) and $< 100.4^{\circ}\text{F}$ (38.0°C), or $\geq 100.4^{\circ}\text{F}$ (38.0°C) and $< 101.3^{\circ}\text{F}$ (38.5°C), or $\geq 101.3^{\circ}\text{F}$ (38.5°C) is reported here for all randomized participants in the APaT population with temperature data available. Analysis population included all randomized participants in base study who received at least 1 dose of the V503 vaccine or placebo and have provided safety data at any time during the study.

End point type	Primary

Secondary: Percentage of Participants with Seroconversion to HPV 6/11/16/18/31/33/45/52/58

End point title	Percentage of Participants with Seroconversion to HPV 6/11/16/18/31/33/45/52/58
End point description:	
Percentage of seroconversion to each of HPV 6/11/16/18/31/33/45/52/58 at Month 7 per cLIA from participant serum samples. Seroconversion is defined as a change in participant's serostatus from seronegative at Day 1 to seropositive at 1 month post last dose Month 7. Participant with anti-HPV cLIA titer at/above serostatus cutoff cLIA values for a given HPV type is seropositive for that type. HPV serostatus cutoffs were Type6: ≥ 65 , Type11: ≥ 37 ; Type16: ≥ 79 , Type18: ≥ 85 , Type31: ≥ 46 , Type33: ≥ 26 , Type45: ≥ 21 , Type 52: ≥ 30 , & Type58: ≥ 31 . Percentage of participants with seroconversion is reported in all participants in the PPI population.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 55 months

Adverse event reporting additional description:

All-cause mortality included all the randomized participants. Non-serious and serious adverse events were reported on all Participants as Treated (APaT). The APaT population consists of all randomized participants who received at least 1 dose of the V503 or placebo and have provided safety data at any time during the study.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 September 2022	The major change of Amendment 1 (AM1) was to change the Sponsor entity name and address change and to add the capability to enroll underrepresented groups.
05 December 2023	The major change of AM2 was to add the extension study.
24 September 2024	The major change of AM3 was to conduct final efficacy analysis before end of study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
