

Clinical trial results:

A Prospective, Randomized, Double-masked, Sham-controlled, Multi-center, Two-arm, Phase 3 Study to Evaluate the Efficacy and Safety of Intravitreal KSI-301 in Participants with Moderately Severe to Severe Non-proliferative Diabetic Retinopathy (NPDR)

Summary

EudraCT number	2020-001064-29
Trial protocol	SK ES LV CZ
Global end of trial date	31 August 2023

Results information

Result version number	v1 (current)
This version publication date	08 September 2024
First version publication date	08 September 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 September 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 August 2023
Global end of trial reached?	Yes
Global end of trial date	31 August 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that KSI-301 5 mg is superior to sham treatment, with respect to proportion of eyes improving ≥ 2 steps on Diabetic Retinopathy Severity Scale (DRSS) from baseline at Week 48.

Protection of trial subjects:

The study followed the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All local regulatory requirements pertinent to safety of trial subjects were followed during the conduct of the trial. At the Investigator's discretion, treatment with pan-retinal photocoagulation laser.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Slovakia: 2
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	United States: 243
Worldwide total number of subjects	253
EEA total number of subjects	10

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	191
From 65 to 84 years	62
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were recruited based on physician referral at 52 medical centers between September 2021 and August 2022. The first participant was enrolled on 07 September 2021 and the last on 25 August 2022.

Pre-assignment

Screening details:

Of 560 enrolled participants, 253 met eligibility criteria and were randomized to treatment.

Period 1

Period 1 title	Primary Study (Through Week 48)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	KSI-301 - Treatment Group A

Arm description:

Intravitreal injection of KSI-301 (5 mg): three initiating doses, and then every 24 weeks through Week 92

Arm type	Experimental
Investigational medicinal product name	Tarcocimab tedromer
Investigational medicinal product code	KSI-301
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

5 mg via intravitreal injection

Arm title	Sham - Treatment Group B
------------------	--------------------------

Arm description:

Sham injection on the same schedule as Treatment Group A

Sham injection: The sham injection is a procedure that mimics an intravitreal injection. It involves pressing the blunt end of an empty syringe (without a needle) against the anesthetized eye. It is performed to maintain masking of the study.

Arm type	Sham Comparator
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	KSI-301 - Treatment Group A	Sham - Treatment Group B
Started	128	125
Completed	120	115
Not completed	8	10
Adverse event, serious fatal	1	1
Consent withdrawn by subject	4	2

Non-compliance with study schedule	-	1
Adverse event, non-fatal	-	3
Participant relocated	1	-
Lost to follow-up	2	3

Period 2

Period 2 title	After Week 48
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	KSI-301 - Treatment Group A

Arm description:

End point values	KSI-301 - Treatment Group A	Sham - Treatment Group B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	128 ^[11]	125 ^[12]		
Units: Months				
median (confidence interval 95%)				
Time to first development of DME	0 (0 to 0)	0 (0 to 0)		

Notes:

[11] - 0 = Not available due to small number of DME events

[12] - 0 = Not available due to small number of DME events

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events (AEs) reported through the End of Study or Early Termination (ET)

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA

Reporting groups

Reporting group title	KSI-301 - Treatment Group A (Day 1 to Week 48)
-----------------------	--

Reporting group description:

Intravitreal injection of KSI-301 (5 mg): three initiating doses, and then every 24 weeks through Week 92

KSI-301: Intravitreal injection

Reporting group title	Treatment Group B (Day 1 to Week 48)
-----------------------	--------------------------------------

Reporting group description:

Sham injection on the same schedule as Treatment Group A

Sham injection: The sham injection is a procedure that mimics an intravitreal injection. It involves pressing the blunt end of an empty syringe (without a needle) against the anesthetized eye. It is performed to maintain masking of the study.

Reporting group title	KSI-301 - Treatment Group A (Post Week 48 to End of Study)

subjects affected / exposed occurrences (all)	3 / 115 (2.61%) 3		
Infections and infestations COVID-19 subjects affected / exposed occurrences (all)	0 / 115 (0.00%) 0		
Metabolism and nutrition disorders Diabetes mellitus subjects affected / exposed occurrences (all)	2 / 115 (1.74%) 2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 May 2021	Version 1.1 - Changes from Version 1.0 (original protocol) include: minor editorial and administrative revisions.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study was terminated after all participants completed Wk 48 safety follow-up due to demonstration of efficacy at the Week 48 Primary Analysis. Results were not reported for some endpoints due to insufficient sample size.

Notes:
