Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 October 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 October 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective was to evaluate the safety, tolerability and maximum tolerated dose or recommended phase 2 dose (RP2D) of acapatamab in combination with enzalutamide (Subprotocol A), acapatamab in combination with abiraterone (Subprotocol B), or acapatamab in combination with AMG 404 (Subprotocol C, Parts 1 and 2), evaluate preliminary antitumor activity of AMG monotherapy (Subprotocol C, Part 3) and to evaluate the safety and tolerability of acapatamab (Subprotocol D) in participants with mCRPC.

Protection of trial subjects:

This study was conducted in accordance with the protocol and with: consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines, applicable International Council for Harmonisation (ICH) Good Clinical Practice (GCP) guidelines and applicable ICH laws and regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 January 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 24
Country: Number of subjects enrolled	Denmark: 5
Country: Number of subjects enrolled	Spain: 17
Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	United Kingdom: 4
Worldwide total number of subjects	54
EEA total number of subjects	26

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	38
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

54 participants were enrolled at 11 centers in Denmark, Spain, Sweden, the United Kingdom, and the United States between 15 January 2021 and 23 October 2023.

One additional participant was enrolled in Subprotocol D. To protect participant privacy, the results of this participant are not included in this summary.

Pre-assignment

Screening details:

A total of 54 participants were enrolled and 53 received study treatment.

Period 1

Period 1 title	Main Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Subprotocol A: Acapatamab and Enzalutamide

Arm description:

In Cycle 1, participants initially received acapatamab as a 3-day (ie, 72-hour) extended intravenous (eIV) infusion, followed by the target dose (60-minute intravenous [IV] infusion) for the following doses throughout the first cycle. In subsequent cycles, participants received acapatamab at the target dose in 28-day cycles. Participants also received enzalutamide as oral tablets or oral capsules.

Arm type	Experimental
Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Enzalutamide was taken as either oral capsules or oral tablets.

Investigational medicinal product name	Acapatamab
Investigational medicinal product code	
Other name	AMG 160
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Acapatamab was administered as a short-term or extended IV infusion.

Arm title	Subprotocol B: Acapatamab and Abiraterone
------------------	---

Arm description:

In Cycle 1, participants initially received acapatamab as a 3-day (ie, 72-hour) eIV infusion, followed by the target dose (60-minute IV infusion) for the following doses throughout the first cycle. In subsequent cycles, participants received acapatamab at the target dose in 28-day cycles. Participants also received abiraterone as oral tablets and prednisone (or prednisolone in some regions).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Abiraterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abiraterone was taken as oral tablets.

Investigational medicinal product name	Acapatamab
Investigational medicinal product code	
Other name	AMG 160
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Acapatamab was administered as a short-term or extended IV infusion.

Arm title	Subprotocol C, Parts 1 and 2: Acapatamab and AMG 404
------------------	--

Arm description:

In Cycle 1, participants initially received acapatamab as a 3-day (ie, 72-hour) eIV infusion, followed by the target dose (60-minute IV infusion) for the following doses throughout the first cycle. In subsequent cycles (≥ 2), participants received acapatamab at the target dose in 28-day cycles. Participants also received abiraterone as oral tablets and prednisone (or prednisolone in some regions). Participants also received AMG 404 as a short-term 30 minute IV infusion once per cycle.

Arm type	Experimental
Investigational medicinal product name	AMG 404
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

AMG 404 was administered as a short-term IV infusion.

Investigational medicinal product name	Acapatamab
Investigational medicinal product code	
Other name	AMG 160
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Acapatamab was administered as a short-term or extended IV infusion.

Arm title	Subprotocol C, Part 3: AMG 404 Monotherapy
------------------	--

Arm description:

Participants received AMG 404 as a short-term 30-minute IV infusion once during each cycle.

Arm type	Experimental
Investigational medicinal product name	AMG 404
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

AMG 404 was administered as a short-term IV infusion.

Primary: Subprotocols A, B and C (Parts 1 and 2): Number of Participants Who Experienced a Dose-limiting Toxicity (DLT)

End point title	Subprotocols A, B and C (Parts 1 and 2): Number of Participants Who Experienced a Dose-limiting Toxicity (DLT) ^{[1][2]}
-----------------	--

End point description:

DLTs were defined as any adverse event (per Common Terminology Criteria for Adverse Events (CTCAE) v5: Grade 5=Death, Grade 4=Life-threatening, Grade 3=Moderate) occurring within 28 days of the first AMG 160 dose, possibly related to the treatment, including:

- Grade 5 toxicity
- Grade 4 thrombocytopenia
- Grade 3 thrombocytopenia with significant hemorrhage
- Grade 4 neutropenia > 5 days
- Febrile neutropenia
- Grade 3 anemia requiring transfusion
- Grade ≥ 3 non-hematologic toxicity (with exceptions per protocol)
- Aspartate transaminase/alanine transaminase >3x upper limit of normal (ULN) with serum total bilirubin >2x ULN without cholestasis or another clear cause
- Grade ≥ 3 non-hematological toxicity delaying treatment > 2 weeks or resulting in <75% dose administration

DLT Analysis Set: Included all participants who received at least one AMG 160 dose and had an evaluable DLT endpoint (had a DLT or completed all planned doses without a DLT within 28-day DLT window in Cycle 1).

End point type	Primary
----------------	---------

End point timeframe:

Day 1 to Day 28

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were pre-planned for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analyses were pre-planned for this endpoint.

Primary: Subprotocols A, B and C (Parts 1 and 2): Number of Participants Who Experienced a Treatment-emergent Adverse Event (TEAE)

End point title	Subprotocols A, B and C (Parts 1 and 2): Number of Participants Who Experienced a Treatment-emergent Adverse Event (TEAE) ^[3] ^[4]
-----------------	---

End point description:

A TEAE was defined as any untoward medical occurrence in a clinical study participant irrespective of a causal relationship with the study treatment that started after the first dose of acapatamab, or AMG 404 (subprotocol C, parts 1 and 2), whichever was earlier.

A treatment-related TEAE was defined as a TEAE that had a reasonable possibility of being caused by acapatamab, or AMG 404 (subprotocol C, parts 1 and 2 only).

Clinically significant changes from baseline in vital signs and clinical laboratory tests were also recorded as TEAEs.

Safety Analysis Set: Included all participants who were enrolled and received at least 1 dose of acapatamab, or AMG 404 (subprotocol C, parts 1 and 2 only).

End point type	Primary
----------------	---------

End point timeframe:

From first dose of acapatamab/AMG 404 to the first of 30 days after last dose of acapatamab/AMG404, end of study date or the initiation of a new anticancer therapy (up to a maximum of 3 years).

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were pre-planned for this endpoint.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analyses were pre-planned for this endpoint.

Primary: Subprotocol C, Part 3: Objective Response Rate (ORR)

End point title	Subprotocol C, Part 3: Objective Response Rate (ORR) ^{[5][6]}
-----------------	--

End point description:

ORR was defined as the percentage of participants who experienced a complete response (CR) or partial response (PR), per response evaluation criteria in solid tumors (RECIST) 1.1 with Prostate Cancer Working Group 3 (PCWG3) modifications. Responses were required to be confirmed at least 4 weeks later.

RECIST Evaluable Analysis Set: Included all participants that were enrolled and received at least 1 dose of AMG 404 and had measurable baseline disease per RECIST 1.1 and had the opportunity to be followed for at least 9 weeks starting from study Day 1.

End point type	Primary
----------------	---------

End point timeframe:

From Cycle 1 Day 1 until progression, start of new anticancer therapy, or up to 3 years after the first dose of AMG 404 (each cycle was 28 days, maximum duration of AMG 404 treatment was 105.1 weeks).

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were pre-planned for this endpoint.

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analyses were pre-planned for this endpoint.

End point description:

A Gallium PSMA-11 response was defined as a $\geq 50\%$ reduction from baseline in the maximum standardized uptake value (SUV) using 68Gallium (68Ga)-PSMA-11 positron emission tomography (PET)/CT. PSMA-11 response percentages were based on the number of participants with a baseline PSMA assessment (defined as the last non-missing value on or prior to the pre-dose of AMG 160/AMG 404 assessments) on Cycle 1 Day 1. The 95% confidence interval was calculated based on the Clopper-Pearson method.

Safety Analysis Set: Included all participants who were enrolled and received at least 1 dose of acapatamab or AMG 404 (Subprotocol C only).

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle 1 Day 1 to 14 days post-last dose of AMG 404 (each cycle was 28 days).

Secondary: Subprotocols A, B and C (Parts 1, 2 and 3): Time to Symptomatic Skeletal Events

End point title	Subprotocols A, B and C (Parts 1, 2 and 3): Time to Symptomatic Skeletal Events
-----------------	---

End point description:

Time to symptomatic skeletal events was defined as time from study Day 1 to the first symptomatic skeletal event, otherwise time to symptomatic skeletal event was censored at the last dose of acapatamab/AMG 404 or end of safety follow-up date, whichever was later. Symptomatic skeletal events included fracture, spinal cord compression and radiation or surgery to bone. The median was estimated using the Kaplan-Meier method and the 95% confidence interval was estimated using the method by Brookmeyer and Crowley.

9999 = median and upper limit not calculable due to fewer than 50% events. Lower bound was calculated from observed data that was available (25% percentile).

999999 = median, lower and upper limits were not calculable due to very low number of events.

Safety Analysis Set: Included all participants who were enrolled and received at least 1 dose of acapatamab or AMG 404 (Subprotocol C only).

End point title	Subprotocol C, Part 3: Number of Participants Who Experienced a TEAE ^[83]
-----------------	--

End point description:

A TEAE was defined as any untoward medical occurrence in a clinical study participant irrespective of a causal relationship with the study treatment that started after the first dose of AMG 404, whichever was earlier.

A treatment-related TEAE was defined as a TEAE that had a reasonable possibility of being caused by AMG 404.

Clinically significant changes from baseline in vital signs and clinical laboratory tests were also recorded as TEAEs.

Safety Analysis Set: Included all participants who were enrolled and received at least 1 dose of AMG 404.

End point type	Secondary
----------------	-----------

End point timeframe:

From first dose of AMG 404 to the first of 30 days after last dose of AMG 404, end of study date or the initiation of a new anticancer therapy (up to a maximum of 3 years).

Notes:

[83] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analyses were pre-planned for this endpoint.

End point values	Subprotocol C, Part 3: AMG 404 Monotherapy			
Subject group type	Reporting group			
Number of subjects analysed	10			
Units: participants				
At least 1 TEAE	10			
At least 1 treatment-related TEAE	7			

Statistical analyses

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Death: 1st dose of acapatamab/AMG 404 to end of study (up to a maximum of 3 years). TEAE: 1st dose of acapatamab/AMG 404 to min end of treatment + 30 days, end of study, 1st new anti-cancer therapy) (up to a maximum of 3 years)

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
Dictionary version	26.0

Reporting groups

Reporting group title	Subprotocol A: Acapatamab and Enzalutamide
-----------------------	--

Reporting group description:

In Cycle 1, participants initially received acapatamab as a 3-day (ie, 72-hour) eIV infusion, followed by the target dose (60-minute IV infusion) for the following doses throughout the first cycle. In subsequent cycles, participants received acapatamab at the target dose in 28-day cycles. Participants also received enzalutamide as oral tablets or oral capsules.

Reporting group title	Subprotocol B: Acapatamab and Abiraterone
-----------------------	---

Reporting group description:

In Cycle 1, participants initially received acapatamab as a 3-day (ie, 72-hour) eIV infusion, followed by the target dose (60-minute IV infusion) for the following doses throughout the first cycle. In subsequent cycles, participants received acapatamab at the target dose in 28-day cycles. Participants also received abiraterone as oral tablets and prednisone (or prednisolone in some regions).

Reporting group title	Subprotocol C, Parts 1 and 2: Acapatamab and AMG 404
-----------------------	--

Reporting group description:

In Cycle 1, participants initially received acapatamab as a 3-day (ie, 72-hour) eIV infusion, followed by the target dose (60-minute IV infusion) for the following doses throughout the first cycle. In subsequent cycles (≥ 2), participants received acapatamab at the target dose in 28-day cycles. Participants also received abiraterone as oral tablets and prednisone (or prednisolone in some regions). Participants also received AMG 404 as a short-term 30 minute IV infusion once per cycle.

Reporting group title	Subprotocol C, Part 3: AMG 404 Monotherapy
-----------------------	--

Reporting group description:

Participants received AMG 404 as a short-term 30-minute IV infusion once during each cycle.

Serious adverse events	Subprotocol A: Acatamab and Enzalutamide	Subprotocol B: Acatamab and Abiraterone	Subprotocol C, Parts 1 and 2: Acatamab and AMG 404

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 October 2020	The following updates were made to the master protocol: <ul style="list-style-type: none">- Removed Appendix 3 (Safety Events: Definitions and Procedures for Recording, Evaluating, Follow-up and Reporting) as this appendix was added to all subprotocols.- Additional changes were made to align with subprotocol amendments (removal of electrocardiograms from endpoint and "subject's legally acceptable representative").
30 March 2021	The following updates were made to the master protocol: <ul style="list-style-type: none">- Clarified that participant randomization into subprotocols depended on upon slot availability .- Approximate total participant enrollment was updated to align with changes made in subprotocols A, B, and C (addition of Asia cohort).- Administrative changes and minor changes to align with protocol template were made.
13 May 2021	The following updates were made to the master protocol: <ul style="list-style-type: none">- Included a new subprotocol ((Subprotocol D: A Phase 1b Study Evaluating the Safety and Efficacy of AMG 160 Monotherapy in Subjects With Metastatic Castration Resistant Prostate Cancer [mCRPC]). The study schema, number of participants and measures to minimize bias were updated.- The primary endpoint was clarified to indicate that dose-limiting toxicities are only an endpoint for the dose exploration phase of associated subprotocols.- Reference included to the master informed consent form.
16 July 2021	The following updates were made to the master protocol: <ul style="list-style-type: none">- Clarified the definition of screen failures.- Aligned with updated protocol template.- Minor clarifications to language.- Administrative and editorial changes throughout protocol.

21 February 2022	<p>The following updates were made:</p> <ul style="list-style-type: none"> - Study Governance Considerations were updated to include that Amgen or its designee reserved the right to stop one or multiple subprotocols in addition to the study or study site participation. - In case tocilizumab is not available, siltuximab language was added to include instructions for administration and conduction of a subgroup analysis of safety with cytokine release syndrome outcome and pharmacokinetics for participants who received siltuximab treatment. - Since an analysis based on RECIST 1.1 without PCWG3 modifications was performed, secondary endpoint was updated to remove PCWG3 modifications for RECIST assessment. PCWG3 recommended endpoints were also, albeit separately, evaluated. - Anemia was added as a new hematology-related sign and symptom of cytokine release syndrome. - The approximate number of participants to be enrolled in subprotocols A-D was updated to 136 participants to reflect a change made in the number of participants to be enrolled for subprotocol C (reduced to 30). - A clarification was provided to specify that countries in Asia did not participate in subprotocol D. - A clarification was provided to align naming of the investigational product AMG 160 in study protocol with the name used in Investigator's Brochure, Acapatamab. - Reference section was updated to add two citations supporting the newly added siltuximab language. - Administrative and editorial changes (including grammatical, typographical, and formatting) were made throughout the protocol.
------------------	--

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study 20190505 (including all subprotocols) was discontinued early after a strategic decision by Amgen. This study was not stopped for safety reasons or lack of efficacy.

Notes:
