

Clinical trial results:

Efficacy and safety of novel treatment options for adults with COVID-19 pneumonia. A double-blinded, randomized, multi-stage, 6-armed placebo-controlled trial in the framework of an adaptive trial platform

Summary

EudraCT number	2020-001367-88
Trial protocol	DK
Global end of trial date	17 June 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 August 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 June 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The aim of this study is to evaluate the efficacy and safety of convalescent anti-SARS-CoV-2 plasma, hydroxychloroquine, sarilumab and baricitinib compared with placebo in combination with standard of care (SOC) for the treatment of moderate-to-severe COVID-19 pneumonia on the basis of the composite endpoint: All-cause mortality or need of invasive mechanical ventilation up to 28 days.

Protection of trial subjects:

The adaptive study design allowed each treatment group to be evaluated separately. If necessary, each treatment group could be discontinued due to futility, effect, safety or new knowledge on specific treatment of COVID-19.

This was the case for hydroxychloroquine which was withdrawn from the study 2020-06-09 due to new research results (from other studies) indicating severe adverse events, when giving to COVID-19 patients.

Due to the introduction of dexamethason (and Remdesevir) as first line treatment, we considered it unnecessary to continue baricitinib and sarilumab as the effect immuno-suppressive.

The trial will continue as a non-drug trial with convalescence SARS-CoV-2 plasma.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 April 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 6
Worldwide total number of subjects	6
EEA total number of subjects	6

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	4
From 65 to 84 years	1
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Recruitment period went from 01-05-2020 to 11-06-2020.

Only one sites was initiated, and all 6 patients were recruited from and hospitalized at Hvidovre Hospital, Denmark.

All patients with SARS-Covid-19 positive swap or traceal sputum hospitalized patiens during the period were screened for participation by treating physicians.

Pre-assignment

Screening details:

60 patients in total went through screening.

Period 1

Period 1 title	Inclusion (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Eligible patients who signed informed content, were enrolled. Randomization was performed in RedCap by unblinded personel. Patients were randomized to one of the six study arms. Study treatment were prepared and administrated by unblinded personel. All six patients were randomized to oral treatment. All oral treatment were capsulated in identical opaque capsules to maintain blinding for all other personel than the unblinded personel.

Arms

Are arms mutually exclusive?	Yes
Arm title	Hydroxychloroquin

Arm description:

Hydroxychloroquine (Plaquenil) (capsulated), administred600 mg once daily for 7 days

Arm type	Experimental
Investigational medicinal product name	Plaquenil
Investigational medicinal product code	P01BA02
Other name	Hydroxychloroquine
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

tablets contains 200 mg

Patients received 600 mg daily

Arm title	Baricitinib
------------------	-------------

Arm description:

Baricitinib (Olumiant) (capsulated), administred 4 mg daily for 7 days

Arm type	Experimental
Investigational medicinal product name	Olumiant
Investigational medicinal product code	L04AA37
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets of 2 mg

2 tablets (4 mg) daily for 7 days

Arm title	Placebo
Arm description:	
Placebo tablet containing glucosemonohydrat (capsulated) administred once daily for 7 days	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
3 capsulated placebo tablets once daily for 7 days

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 June 2020	The hydroxychloroquine arm closed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
17 June 2020	Pre-mature termination of the study. The trial continues as a non-drug trial with convalescence plasma.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The trial is terminated pre-maturely. Only 6 patients were included (1500 predicted) therefore results are not analysed.

Notes:
