

Clinical trial results:

Phase 3 multicenter, randomized, double-blind, placebo-controlled study to assess the efficacy and safety of canakinumab on cytokine release syndrome in patients with COVID-19-induced pneumonia (CAN-COVID)

Summary

EudraCT number	2020-001370-30
Trial protocol	DE GB FR ES HU IT
Global end of trial date	22 December 2020

Results information

Result version number	v1 (current)
This version publication date	15 August 2021
First version publication date	15 August 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 February 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	22 December 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial was to demonstrate the benefit of canakinumab + SOC in increasing chance of survival without ever requiring invasive mechanical ventilation among patients with COVID-19-induced pneumonia and CRS

Protection of trial subjects:

This study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 April 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Russian Federation: 153
Country: Number of subjects enrolled	Spain: 34
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	United States: 253
Worldwide total number of subjects	454
EEA total number of subjects	37

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	304
From 65 to 84 years	142
85 years and over	8

Subject disposition

Recruitment

Recruitment details:

Participants took part at 39 investigative sites in 6 countries.

While patient flow shows 454 participants enrolled, only 451 randomized. 3 were "mis-randomized" i.e. assigned a randomization number in error and not treated.

Pre-assignment

Screening details:

Participants were screened within 24 hours prior to enrollment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Blinding implementation details:

This was a double-blind, randomized, placebo-controlled trial. Participants, all site staff (including study investigator and study nurse), persons performing the assessments, and clinical trial team remained blinded to the identity of the treatment from the time of randomization until database lock for the primary analysis.

Arms

Are arms mutually exclusive?	Yes
Arm title	Canakinumab

Arm description:

Canakinumab 450 mg for body weight 40-<60 kg, 600 mg for 60-80 kg or 750 mg for >80 kg in 250 mL of 5% dextrose infused IV over 2 hours. Single dose on Day 1.

Arm type	Experimental
Investigational medicinal product name	I.V. infusion
Investigational medicinal product code	ACZ885
Other name	canakinumab
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Canakinumab (450 mg for body weight of 40-<60 kg, 600 mg for 60-80 kg or 750 mg for >80 kg) versus placebo in 250mL of 5% dextrose administered by intravenous infusion over 2 hours.

Arm title	Placebo
------------------	---------

Arm description:

250 mL of 5% dextrose infused IV over 2 hours. Single dose on Day 1.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	Placebo
Other name	Dextrose
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

I.V. infusion

Secondary: Geometric Mean Ratio to baseline in the C-reactive protein (CRP)

End point title	Geometric Mean Ratio to baseline in the C-reactive protein
-----------------	--

End point description:

Measurement of C Reactive Protein (mg/L), Serum Or Plasma over time. The level of C-reactive protein (CRP), which can be measured in the blood, increases when there's inflammation in the body. Lower values of ratio to baseline in the CRP indicates less inflammation. The ratio to baseline at each time point (day) for each patient is calculated as the level of a specific biomarker at the time point divided by the baseline level of the biomarker, where baseline is the last non-missing value before study treatment. The geometric mean of ratio to baseline at each time point for each treatment group is calculated by first averaging the logarithms of the ratios to baseline and then take the exponential function of the same base.

End point type	Secondary
----------------	-----------

End point timeframe:

Over time and up to day 29: Baseline, Day 2, Day 3, Day 5, Day 7, Day 9, Day 11, Day 13, Day 15, Day 17, Day 19, Day 21, Day 23, Day 25, Day 27 and Day 29.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from first dose of study treatment until end of study at day 127

Adverse event reporting additional description:

Adverse Events (AEs) are any untoward sign or symptom that occurs during the study treatment. Adverse events and all-cause mortality are evaluated in the Safety Set that includes all participants who received at least one dose of double-blind treatment.

occurrences (all)	0	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 June 2020	1- A clarification on source data verification approaches was included to align with the EMA Guidance on the Management Of Clinical Trials During The COVID-19 (Coronavirus) Pandemic (Version 3, 28APR20); 2- As requested by FDA, inclusion criteria 2 was updated to allow patients ≥ 12 years of age to be included in the trial in the US only (However, no children were ever enrolled. This was an adult trial); 3- Other minor points were also updated or corrected to further optimize the clinical trial protocol.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
