

Clinical trial results:

An adaptive open label, multiple ascending dose study of the safety, tolerability and bio-effect of Aurase for wound debridement in patients with venous leg ulcers and diabetic foot ulcers (CLEANVLU/DFU)

Summary

EudraCT number	2020-001392-32
Trial protocol	HU
Global end of trial date	06 February 2023

Results information

Result version number	v1 (current)
This version publication date	13 March 2024
First version publication date	13 March 2024

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 June 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 February 2023
Global end of trial reached?	Yes
Global end of trial date	06 February 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the safety and tolerability of multiple ascending doses of Aurase Wound Gel when administered cutaneously (topically) to participants with Venous Leg Ulcers (VLU)

Protection of trial subjects:

Study will be conducted in accordance with the requirements of International Council for Harmonisation Good Clinical Practice (ICH GCP), the Declaration of Helsinki (revised version of 2013), Good Manufacturing Practice (GMP), and the current national regulations and guidelines. The protocol will be approved by both the local ethics committee(s) (IEC) / institutional review board(s) (IRB) and regulatory authority(ies).

Safety was evaluated based on adverse events (AEs), clinical laboratory tests, tolerability assessments, ECGs, concomitant medication review as well as a number of entry assessments (e.g. vital signs, medical history, physical examination)

For each study cohort a sentinel patient was enrolled and safety data through at least day 8 was reviewed in a safety review meeting (sponsor and enrolling investigator attended). A safety review meeting was also conducted at the end of each cohort to determine whether it was safe to dose escalate in the next cohort.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 October 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Hungary: 27
Country: Number of subjects enrolled	United States: 15
Worldwide total number of subjects	43
EEA total number of subjects	27

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	25
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

A total of 43 participants were enrolled onto the study and received treatment however 1 participant number has been excluded from demographic summary data as they were re-screened with a different reference ulcer

Pre-assignment

Screening details:

Participants with at least one defined VLU suitable for treatment that was no smaller than 2 cm² but no larger than 50cm² and was confirmed as venous in origin by clinical assessments, by Ankle Brachial Pressure Index (ABPI) ≥ 0.8 and/or toe systolic BP pressure > 70mm Hg and with presence of devitalized tissue suitable for debridement

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

N/A

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Cohort 1; Aurase wound gel x0 dose concentration
------------------	--

Arm description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Arm type	Experimental
Investigational medicinal product name	Aurase Wound Gel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gel
Routes of administration	Topical

Dosage and administration details:

Aurase wound gel x0 dose concentration administered cutaneously (topically) to the reference Venous Leg Ulcer (VLU) 3 times per week for up to 4 weeks. The actual volume of gel to be administered in the clinical trial will be dependent on the surface area of the VLU measured.

Arm title	Cohort 2; Aurase wound gel x1 dose concentration
------------------	--

Arm description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Arm type	Experimental
Investigational medicinal product name	Aurase Wound Gel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gel
Routes of administration	Topical

Dosage and administration details:

Aurase wound gel x1 dose concentration administered cutaneously (topically) to the reference Venous Leg Ulcer (VLU) 3 times per week for up to 4 weeks. The actual volume of gel to be administered in the clinical trial will be dependent on the surface area of the VLU measured.

Arm title	Cohort 3; Aurase wound gel x1.8 dose concentration
Arm description: Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.	
Arm type	Experimental
Investigational medicinal product name	Aurase Wound Gel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gel
Routes of administration	Topical

Dosage and administration details:

Aurase wound gel x1.8 dose concentration administered cutaneously (topically) to the reference Venous Leg Ulcer (VLU) 3 times per week for up to 4 weeks. The actual volume of gel to be administered in the clinical trial will be dependent on the surface area of the VLU measured.

Arm title	Cohort 4; Aurase wound gel x5 dose concentration
------------------	--

Arm description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Arm type	Experimental
Investigational medicinal product name	Aurase Wound Gel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gel
Routes of administration	Topical

Dosage and administration details:

Aurase wound gel x5 dose concentration administered cutaneously (topically) to the reference Venous Leg Ulcer (VLU) 3 times per week for up to 4 weeks. The actual volume of gel to be administered in the clinical trial will be dependent on the surface area of the VLU measured.

Arm title	Cohort 5; Aurase wound gel x9 dose concentration
------------------	--

Arm description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Arm type	Experimental
Investigational medicinal product name	Aurase Wound Gel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gel
Routes of administration	Topical

Dosage and administration details:

Aurase wound gel x9 dose concentration administered cutaneously (topically) to the reference Venous Leg Ulcer (VLU) 3 times per week for up to 4 weeks. The actual volume of gel to be administered in the clinical trial will be dependent on the surface area of the VLU measured.

Reporting groups

Reporting group title	Cohort 1; Aurase wound gel x0 dose concentration
-----------------------	--

Reporting group description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Reporting group title	Cohort 2; Aurase wound gel x1 dose concentration
-----------------------	--

Reporting group description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Reporting group title	Cohort 3; Aurase wound gel x1.8 dose concentration
-----------------------	--

Reporting group description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Reporting group title	Cohort 4; Aurase wound gel x5 dose concentration
-----------------------	--

Reporting group description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Reporting group title	Cohort 5; Aurase wound gel x9 dose concentration
-----------------------	--

Reporting group description:

Aurase Wound Gel is reconstituted from Aurase Component A (a hydrogel) and Aurase Component B (stabilised solutions of Aurase enzyme). By diluting different strengths of Aurase Component B with Component A, specific concentrations of Aurase Wound Gels with differing Aurase contents are yielded.

Serious adverse events	Cohort 1; Aurase wound gel x0 dose concentration	Cohort 2; Aurase wound gel x1 dose concentration	Cohort 3; Aurase wound gel x1.8 dose concentration
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 5 (0.00%)	0 / 9 (0.00%)	0 / 10 (0.00%)
number of deaths (all causes)	0	0	0
number of deaths resulting from adverse events	0	0	0
Vascular disorders			
Deep vein thrombosis			
subjects affected / exposed	0 / 5 (0.00%)	0 / 9 (0.00%)	0 / 10 (0.00%)
occurrences causally related to treatment / all	0 / 0	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0

General disorders and administration site conditions			
Debility			
subjects affected / exposed	0 / 5 (0.00%)	0 / 9 (0.00%)	0 / 10 (0.00%)
occurrences causally related to treatment / all	0 / 0	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Infections and infestations			
Erysipelas			
subjects affected / exposed	0 / 5 (0.00%)	0 / 9 (0.00%)	0 / 10 (0.00%)
occurrences causally related to treatment / all	0 / 0	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 November 2020	Protocol V1 to V2 - update of exclusion criteria, clarification on safety definitions/sections
02 June 2021	Protocol V2 to V3 - Inclusion of COVID-19 risk assessment, reduction in cohort 1 patient number, modification/clarification of endpoints, correction to discrepancies, pre-clinical information added, update to trial schedule
15 October 2021	protocol V3 to v4 - update to exploratory endpoints, addressing comments from FDA, safety review required attendees updated, off-site visit information updated
20 April 2022	Protocol V4 to V5 - modification to make study more adaptive, addition of cohorts (6&7)
20 October 2022	Protocol V5 to V6 - modification to conduct of previously added cohorts, visit window and screening period updated

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
02 January 2023	Cohorts 6 & 7 not completed, trial end declared (in line with original plan)	-

Notes:

Limitations and caveats

None reported
