

Clinical trial results:

A randomized, double-blind, dose-ranging, placebo-controlled, Phase 2a evaluation of the safety, tolerability, and pharmacokinetics of PLN-74809 in participants with primary sclerosing cholangitis (PSC) and suspected liver fibrosis (INTEGRIS-PSC)

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 November 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 March 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the safety and tolerability of PLN-74809 following daily administration for up to 12 weeks in participants with PSC in part 1 and part 2 and part 3 for at least 24 weeks and up to 48 weeks.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

All study subjects were required to read and sign an Informed Consent Form.

Background therapy:

Participants who were receiving the following medications were allowed: treatment with UDCA, therapy is at a dose of < 25 mg/kg/day, has been stable for at least 3 months before screening concomitant medications for the treatment of IBD, therapy was stable from screening and expected to remain stable for the duration of the study.

Evidence for comparator: -

Actual start date of recruitment	19 August 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 44
Country: Number of subjects enrolled	United States: 43
Country: Number of subjects enrolled	Australia: 8
Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	Austria: 7

Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Germany: 3
Worldwide total number of subjects	121
EEA total number of subjects	16

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	110
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were screened at 52 centers in 9 countries. This study was divided into 3 parts, each study part included an up to 42-day Screening period, followed by a treatment period of either 12 weeks (Parts 1 and 2) or at least 24 weeks and up to 48 weeks (Part 3), and finally a 4-week post-treatment follow-up period.

Pre-assignment

Screening details:

201 participants underwent Screening: 102 participants failed screening and 28 participants were rescreened, of whom 18 were randomized. In total, 112 screen failures including both participants who were counted twice due to re-screening and those who were an initial screening failure but successfully

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1: Bexotegrast 40 mg

Arm description:

Part 1: 42-day Screening period, followed by a treatment period of 12 weeks (Bexotegrast 40 mg) and finally 4-week post-treatment follow-up period.

Participants took either Bexotegrast 40mg or a matching placebo

Arm type	Experimental
Investigational medicinal product name	PLN-74809
Investigational medicinal product code	
Other name	Bexotegrast
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Study drug (Bexotegrast 40 mg) will be taken once daily at approximately 24-hour intervals.

Participants will take the study drug on an empty stomach (no food for 2 hours before or 2 hours after dosing) and will drink approximately 240 mL (~1 cup) of water after swallowing the study drug

Arm title	Part 2: Bexotegrast 80 mg
------------------	---------------------------

Arm description:

Part 2: 42-day Screening period, followed by a treatment period of 12 weeks (Bexotegrast 80 mg) and finally 4-week post-treatment follow-up period

Participants took either Bexotegrast 80mg or a matching placebo

Arm type	Experimental
Investigational medicinal product name	PLN-74809
Investigational medicinal product code	
Other name	Bexotegrast
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Study drug (Bexotegrast 80 mg) will be taken once daily at approximately 24-hour intervals.

Participants will take the study drug on an empty stomach (no food for 2 hours before or 2 hours after dosing) and will drink approximately 240 mL (~1 cup) of water after swallowing the study drug

Arm title	Part 2: Bexotegrast 160 mg
------------------	----------------------------

Arm description:

Part 2: 42-day Screening period, followed by a treatment period of 12 weeks (Bexotegrast 160 mg) and finally 4-week post-treatment follow-up period

Participants took either Bexotegrast 160mg or a matching placebo

Arm type	Experimental
Investigational medicinal product name	PLN-74809
Investigational medicinal product code	
Other name	Bexotegrast
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Study drug (Bexotegrast 160 mg) will be taken once daily at approximately 24-hour intervals.

Participants will take the study drug on an empty stomach (no food for 2 hours before or 2 hours after dosing) and will drink approximately 240 mL (~1 cup) of water after swallowing the study drug

Arm title	Part 3: Bexotegrast 320 mg
------------------	----------------------------

Arm description:

Part 3: 42-day Screening period, followed by a treatment period for at least 24 weeks and up to 48 weeks (Bexotegrast 320 mg) and finally 4-week post-treatment follow-up period. ongoing safety and liver assessments continued until the last participant reached 24 weeks of the study; therefore, safety and laboratory assessments could extend to up to 48 weeks.

4 participants in Part 3 previously completed participation in either Part 1 or Part 2 with a minimum of 6 months between completion of the earlier part and participation in Part 3

Arm type	Experimental
Investigational medicinal product name	PLN-74809
Investigational medicinal product code	
Other name	Bexotegrast
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Study drug (Bexotegrast 320 mg) will be taken once daily at approximately 24-hour intervals.

Participants will take the study drug on an empty stomach (no food for 2 hours before or 2 hours after dosing) and will drink approximately 240 mL (~1 cup) of water after swallowing the study drug

Arm title	Placebo
------------------	---------

Arm description:

Matching placebo tablets

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Study drug (placebo) will be taken once daily at approximately 24-hour intervals. Participants will take the study drug on an empty stomach (no food for 2 hours before or 2 hours after dosing) and will drink approximately 240 mL (~1 cup) of water after swallowing the study drug

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 April 2020	Protocol amendment 1 Version 1.0 US (Sequential dosing): Removed Part 2
06 May 2020	Protocol amendment 1 Version 1.1 (Parallel dosing): Removed Part 2
14 December 2020	Protocol amendment 2 Version 1.0 (Sequential dosing): Corrected IND number. Investigational Plan: clarifications. Revised Inclusion Criteria: 2. Revised serum ALP concentration. Clarified and specified the criteria by which Investigators can determine suspected hepatic fibrosis. Revised platelet count. Revised exclusion criteria: Clarified worsening of liver disease. Description of Treatments: Added: Description and rationale for study doses and placebo (40, 80, and 160 mg) and study design for Part 2 Clarification that Part 2 will be randomly assigned (3:1) in parallel treatment cohorts. Selection and Timing of Dose for Each Participant: added language to provide guidance in the even a participant misses a dose of study drug. Allowed Medications: Revised prednisone doses. Disallowed Medications: Added: New contraception language for male and female participants of childbearing potential. Study Procedures: Retesting of a screening laboratory test(s) and/or ultrasound-based transient elastography (FibroScan®) may be permitted once. Liver Imaging (optional): Clarification. Electrocardiograms: Added language regarding triplicate ECG. Definition of SAEs: Added clarification as to which events would not be defined as SAEs. Early Discontinuation of Study or Individual Participants clarification. Retention for the study data for 25 years if per local requirements. Schedule of Assessments, appendix 1: Added or revised assessments to align with revised study procedures
06 January 2021	Protocol amendment 2 Version 1.1 (Parallel dosing): Corrected IND number. Investigational Plan: clarifications. Revised Inclusion Criteria: 2. Revised serum ALP concentration. Clarified and specified the criteria by which Investigators can determine suspected hepatic fibrosis. Revised platelet count. Revised exclusion criteria: Clarified worsening of liver disease. Description of Treatments: Added: Description and rationale for study doses and placebo (40, 80, and 160 mg) and study design for Part 2 Clarification that Part 2 will be randomly assigned (3:1) in parallel treatment cohorts. Selection and Timing of Dose for Each Participant: added language to provide guidance in the even a participant misses a dose of study drug. Allowed Medications: Revised prednisone doses. Disallowed Medications: Added: New contraception language for male and female participants of childbearing potential. Study Procedures: Retesting of a screening laboratory test(s) and/or ultrasound-based transient elastography (FibroScan®) may be permitted once. Liver Imaging (optional): Clarification. Electrocardiograms: Added language regarding triplicate ECG. Definition of SAEs: Added clarification as to which events would not be defined as SAEs. Early Discontinuation of Study or Individual Participants clarification. Retention for the study data for 25 years if per local requirements. Schedule of Assessments, appendix 1: Added or revised assessments to align with revised study procedures

10 January 2022	Protocol amendment 3 Version 1.0 (Sequential dosing): Added background information on bexotegrast Updated to include new information for ongoing and completed studies. Investigational Plan: Added: Description and rationale for 320 mg QD dose for Part 3 following DSMB to evaluate the current 80 and 160 mg dose from Part 2. Data are reviewed by the DSMB; removed option for review by Competent Authorities (if applicable). Revised Inclusion Criterion 7. Revised Exclusion Criterion 18. Revised Exclusion Criterion 21. New formulation (phosphate salt formulation of bexotegrast) to be used in Part 3 (supplied as 80-mg immediate-release tablets). Revised storage conditions. Blinding: Added clarification that contacting the Sponsor's Study Director before unblinding. Added additional data from medication-medication interaction studies between bexotegrast and fluconazole and digoxin. Revised definition of postmenopausal state. Removed option for use of liver MRI within 3 months of Screening as an alternative to baseline MRI. Clarified that targeted physical examination will be performed based on prior findings in the general exam. List of Laboratory tests: Added prothrombin time (coagulation) and CA-19-9 (screening test). Clarified that pharmacogenomics sampling is optional. Causal Relationship of an Adverse Event: Corrected to Yes (related). Definition of SAEs: Clarified timing of pregnancy reporting. Added language to provide direction as to how AEs and serious adverse events are to be reported. Revision of process for reporting SAEs from utilizing EDC to pharmacovigilance vendor (CTI) Interim Analysis: Updated Section to include description of additional interim analyses. Appendix 2 Schedule of Assessments: Part 3: Added assessments and visits for Part 3.
11 January 2022	Protocol amendment 3 Version 1.1 (Parallel dosing): Added background information on bexotegrast Updated to include new information for ongoing and completed studies. Investigational Plan: Added: Description and rationale for 320 mg QD dose for Part 3 following DSMB to evaluate the current 80 and 160 mg dose from Part 2. Data are reviewed by the DSMB; removed option for review by Competent Authorities (if applicable). Revised Inclusion Criterion 7. Revised Exclusion Criterion 18. Revised Exclusion Criterion 21. New formulation (phosphate salt formulation of bexotegrast) to be used in Part 3 (supplied as 80-mg immediate-release tablets). Revised storage conditions. Blinding: Added clarification that contacting the Sponsor's Study Director before unblinding. Added additional data from medication-medication interaction studies between bexotegrast and fluconazole and digoxin. Revised definition of postmenopausal state. Removed option for use of liver MRI within 3 months of Screening as an alternative to baseline MRI. Clarified that targeted physical examination will be performed based on prior findings in the general exam. List of Laboratory tests: Added prothrombin time (coagulation) and CA-19-9 (screening test). Clarified that pharmacogenomics sampling is optional. Causal Relationship of an Adverse Event: Corrected to Yes (related). Definition of SAEs: Clarified timing of pregnancy reporting. Added language to provide direction as to how AEs and serious adverse events are to be reported. Revision of process for reporting SAEs from utilizing EDC to pharmacovigilance vendor (CTI) Interim Analysis: Updated Section to include description of additional interim analyses. Appendix 2 Schedule of Assessments: Part 3: Added assessments and visits for Part 3.
01 November 2022	Protocol amendment 4 Version 1.1 (Parallel dosing): Changed Sponsor Study Director from Greg Cosgrove to Richard Pencek. Revised Inclusion Criterion 9. Revised Inclusion Criterion 10. Revised Inclusion Criterion 3. Revised Exclusion Criterion 11. Revised Exclusion Criterion 28. Revised last bullet to "Treatment with a disallowed medication, other investigational drug within 5 half-lives or 30 days before Screening, whichever time is longer, or the use of an investigational device within 30 days before Screening is prohibited." Revised first sentence to "Prior use of an investigational drug within 5 half-lives or 30 days before Screening, whichever time is longer, or the use of an investigational device within 30 days before Screening is prohibited." Moved examples of contraceptive methods with a failure rate of <1% per year under new subheading "Highly Effective Methods of Birth Control." Revised the time between Visits 1 and 2 to be ≥ 2 weeks. Clarified that a plasma PK sample is not required at the EoS visit. Clarified that a plasma PK sample is not required at the EoS visit. Changes implemented for non-US sites: - Added Exclusion Criterion 29 to exclude participants who participated in an earlier part of the current study (ie, Part 1 or 2) within 6 months of dosing for a subsequent part (ie, Part 2 or 3); - Revised Exclusion Criterion 7.

07 November 2022	<p>Protocol amendment 4 Version 1.0 (Sequential dosing): Changed Sponsor Study Director from Greg Cosgrove to Richard Pencek. Revised Inclusion Criterion 9. Revised Inclusion Criterion 10. Revised Inclusion Criterion 3. Revised Exclusion Criterion 11. Revised Exclusion Criterion 28. Revised last bullet to "Treatment with a disallowed medication, other investigational drug within 5 half-lives or 30 days before Screening, whichever time is longer, or the use of an investigational device within 30 days before Screening is prohibited." Revised first sentence to "Prior use of an investigational drug within 5 half-lives or 30 days before Screening, whichever time is longer, or the use of an investigational device within 30 days before Screening is prohibited." Moved examples of contraceptive methods with a failure rate of <1% per year under new subheading "Highly Effective Methods of Birth Control." Revised the time between Visits 1 and 2 to be ≥ 2 weeks. Clarified that a plasma PK sample is not required at the EoS visit. Clarified that a plasma PK sample is not required at the EoS visit.</p> <p>Changes implemented for non-US sites: - Added Exclusion Criterion 29 to exclude participants who participated in an earlier part of the current study (ie, Part 1 or 2) within 6 months of dosing for a subsequent part (ie, Part 2 or 3); - Revised Exclusion Criterion 7.</p>
