Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	13 September 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 January 2022
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

This was a Phase 2a, randomized, double-blind, parallel group, placebo-controlled safety study designed to evaluate the safety and tolerability of ritlecitinib, including the assessments of brainstem auditory evoked potential (BAEP) and intraepidermal nerve fiber (IENF), in adults 18 to ≤50 years of age with ≥25% scalp hair loss due to alopecia areata (AA).

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of subjects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 September 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Poland: 36
Country: Number of subjects enrolled	United States: 25
Worldwide total number of subjects	71
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	71

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 71 subjects were enrolled and randomized to double-blind treatment and treated (36 in the Ritlecitinib 200/50 mg once daily [QD] arm and 35 in the Placebo -> Ritlecitinib 200/50 mg QD arm).

Pre-assignment

Screening details:

A total of 131 subjects were screened for this study, among whom 71 subjects were randomized to double-blind treatment with 53 screen failures and 7 subjects were not screen failure but not randomized.

Period 1

Period 1 title	Placebo-Controlled Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Ritlecitinib 200/50 mg QD

Arm description:

In the 9-month Placebo-Controlled Phase, each subject received ritlecitinib 200 mg QD (50 mg/tablet ×4) during the initial 4-week period, and received 1 tablet of ritlecitinib 50 mg QD during the remainder of this treatment phase.

Arm type	Experimental
Investigational medicinal product name	Ritlecitinib
Investigational medicinal product code	PF-06651600
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ritlecitinib 200 mg QD (50 mg/tablet ×4) was received during the initial 4-week period, and 1 tablet of ritlecitinib 50 mg QD was received during the remainder of the Placebo-Controlled Phase.

Arm title	Placebo
------------------	---------

Arm description:

In the 9-month Placebo-Controlled Phase, each subject received a total of 4 tablets of placebo QD during the initial 4-week period, and received 1 tablet of placebo QD during the remainder of this treatment phase.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A total of 4 tablets of Placebo QD were received during the initial 4-week period, and 1 tablet of Placebo QD was received during the remainder of the Placebo-Controlled Phase.

Number of subjects in period 1	Ritlecitinib 200/50 mg QD	Placebo
Started	36	35
Completed	32	33
Not completed	4	2
Consent withdrawn by subject	1	1
Adverse event, non-fatal	1	-
Lost to follow-up	1	1
Protocol deviation	1	-

Period 2

Period 2 title	Active Therapy Extension Phase
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Ritlecitinib 50 mg QD

Arm description:

In the 15-month Active Therapy Extension Phase, each subject received 1 tablet of ritlecitinib 50 mg QD and 3 tablets of placebo QD during the initial 4-week period, and then received 1 tablet of ritlecitinib 50 mg QD during the remainder of this treatment phase.

Arm type	Experimental
Investigational medicinal product name	Ritlecitinib
Investigational medicinal product code	PF-06651600
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One tablet of ritlecitinib 50 mg QD and 3 tablets of placebo QD were received during the initial 4-week period, and 1 tablet of ritlecitinib 50 mg QD was received during the remainder of the Active Therapy Extension Phase.

Arm title	Ritlecitinib 200/50 mg QD
------------------	---------------------------

Arm description:

In the 15-month Active Therapy Extension Phase, each subject received ritlecitinib 200 mg QD (50 mg/tablet ×4) during the initial 4-week period, and then received 1 tablet of ritlecitinib 50 mg QD during the remainder of this treatment phase.

Arm type	Experimental
Investigational medicinal product name	Ritlecitinib
Investigational medicinal product code	PF-06651600
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ritlecitinib 200 mg QD (50 mg/tablet ×4) was received during the initial 4-week period, and 1 tablet of

ritlecinib 50 mg QD was received during the remainder of the Active Therapy Extension Phase.

Number of subjects in period 2	Ritlecinib 50 mg QD	Ritlecinib 200/50 mg QD
Started	32	33
Completed	1	0
Not completed	31	33
Consent withdrawn by subject	8	8
Physician decision	1	-
Remained Ongoing in Active Therapy Extension Phase	20	24
Adverse event, non-fatal	1	-
Lost to follow-up	-	1
Lack of efficacy	1	-

Baseline characteristics

Reporting groups

Reporting group title	Ritlecitinib 200/50 mg QD
-----------------------	---------------------------

Reporting group description:

In the 9-month Placebo-Controlled Phase, each subject received ritlecitinib 200 mg QD (50 mg/tablet ×4) during the initial 4-week period, and received 1 tablet of ritlecitinib 50 mg QD during the remainder of this treatment phase.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

In the 9-month Placebo-Controlled Phase, each subject received a total of 4 tablets of placebo QD during the initial 4-week period, and received 1 tablet of placebo QD during the remainder of this treatment phase.

Reporting group values	Ritlecitinib 200/50 mg QD	Placebo	Total
Number of subjects	36	35	71
Age categorical Units: Subjects			
Adults (18-64 years)	36	35	71
Age Continuous Units: years			
arithmetic mean	35.1	34.2	-
standard deviation	± 9.64	± 8.95	-
Sex: Female, Male Units: Subjects			
Female	25	25	50
Male	11	10	21
Race (NIH/OMB) Units: Subjects			
Asian	3	0	3
Black or African American	7	4	11
White	26	28	54
More than one race	0	2	2
Unknown or Not Reported	0	1	1
Baseline Percentage of Nerve Fibers With Axonal Swelling Units: Percentage of Nerve Fibers			
arithmetic mean	1.8	1.8	-
standard deviation	± 2.48	± 2.07	-
Baseline Severity of Alopecia Tool (SALT) Scores for Non-AT/AU Subjects			
Baseline SALT score for non-alpecia totalis (AT)/alopecia universalis (AU) subjects: SALT was a quantitative assessment of alopecia severity based on scalp terminal hair loss performed by an experienced and qualified rater. Score parameters utilized a visual aid showing the division of the scalp hair into 4 quadrants (back, top of scalp, and both sides), with each of 4 quadrants given an accurate determination of the % of scalp surface area covered, representing 24%, 40%, 18%, and 18% of the total scalp surface area, respectively. Higher SALT score represents greater amount of hair loss.			
Units: Units on a scale			
arithmetic mean	59.6	53.7	-
standard deviation	± 30.31	± 24.18	-
Baseline Intraepidermal Nerve Fiber Density (IENFD)			

Units: fibers/mm			
arithmetic mean	10.2	11.0	
standard deviation	± 3.81	± 3.95	-

Primary: Change From Baseline in I-V Interwave Latency on Brainstem Auditory Evoked Potentials (BAEP) at a Stimulus Intensity of 80 dB From the Right Side at Month 9

End point title	Change From Baseline in I-V Interwave Latency on Brainstem Auditory Evoked Potentials (BAEP) at a Stimulus Intensity of 80 dB From the Right Side at Month 9
-----------------	--

End point description:

BAEP interwave I-V latency was the primary endpoint for this study. High-intensity stimulation (80dB) was used. Subjects had BAEP evaluations performed at the same evaluation center, by the same audiology professional using the same equipment, during the study. Audiology and BAEP evaluations were done on the same day, with audiology assessment first. If they could not be done on the same day, assessments had to be within 7 days of each other. A central reader was used for BAEP to confirm that locally read BAEP waves were labelled appropriately and at their peak so that latency were accurate. Central reading also ensured consistency in BAEP interpretation. Analysis population included all subjects who received at least 1 dose of study intervention. Number of subjects analyzed signifies number of subjects who were evaluable for this endpoint.

End point type	Primary
----------------	---------

End point timeframe:

Baseline, Month 9 (Baseline was defined as the last non-missing measurement obtained before the first dose in the placebo-controlled phase)

Secondary: Change From Baseline in Percentage of Intra-epidermal Nerve Fiber (IENF) With Axonal Swelling in Skin Punch Biopsies at Month 9

End point title	Change From Baseline in Percentage of Intra-epidermal Nerve Fiber (IENF) With Axonal Swelling in Skin Punch Biopsies at Month 9
-----------------	---

End point description:

The endpoint "axonal dystrophy" referred to the percentage of IENF with axonal swellings. Axonal swellings were evaluated in peripheral skin punch biopsies from the distal part of lower extremities. Axonal swellings were counted by axon. Any IENF with single or multiple swellings was counted as a single event, ie, a single axon with axonal swellings. For each subject, data were reported as the percentage of IENF with any number of swellings. IENF was assessed at Day 1 and Month 9. Subjects who had entered the Active Therapy Extension Phase at Month 6 had a skin punch biopsy taken at Month 6 for IENF assessments instead of at Month 9. The skin biopsy must have been collected before the start of Active Therapy Extension Phase. Analysis population included all subjects who received at least 1 dose of study intervention. Number of subjects analyzed signifies number of subjects who were evaluable for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Month 9 (Month 6 for the 2 subjects who entered the Active Therapy Extension Phase at Month 6). Baseline was defined as the last non-missing measurement obtained before the first dose in the placebo-controlled phase.

End point values	Ritlecitinib 200/50 mg QD	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	32	33		
Units: Percentage of Nerve Fibers				
median (inter-quartile range (Q1-Q3))				
End of Placebo-controlled Phase (EOP)	0.0 (-0.5 to 2.5)	0.0 (-2.0 to 1.0)

Secondary: Change From Baseline in Intraepidermal Nerve Fiber Density (IENFD) in Skin Punch Biopsies at Month 9

End point title	Change From Baseline in Intraepidermal Nerve Fiber Density (IENFD) in Skin Punch Biopsies at Month 9
-----------------	--

End point description:

IENFD was evaluated in peripheral skin punch biopsies from the distal part of lower extremities. IENFD was measured by counting the number of fibers and fiber branches that independently crossed the dermal-epidermal barrier (basement membrane). Secondary branching was excluded from quantification and fragments were not counted. The length of the histology section was measured (mm) and the linear

epidermal nerve fiber density was reported as number of intraepidermal nerve fibers/mm. Analysis population included all subjects who received at least 1 dose of study intervention. Number of subjects analyzed signifies number of subjects who were evaluable for this endpoint.

End point description:

Absence of wave V on BAEP at stimulus intensities ranging from 80dB to 40dB were summarized descriptively using number of subjects by treatment group at each intensity level. Analysis population included all subjects who received at least 1 dose of study intervention. Number of subjects analyzed

signifies number of subjects who were evaluable for this endpoint. n = x, y in the following table represents the number of subjects at each visit in the Ritlecitinib 200/50 mg QD and Placebo arms, respectively.

One subject had fluctuating absence of Wave V at lower intensities. Hearing sensitivity remained normal from screening through Month 9. The case was reviewed by a panel of neuroaudiology experts who concluded that there was no evidence of neural transmission abnormality in the auditory nerve or auditory brainstem and that the likely explanation for the absence of Wave V was that the evoked response amplitude was too small for it to be identified within the electroencephalogram (EEG).

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse events (TESAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse events (TESAEs)
-----------------	--

End point description:

An adverse event (AE) was any untoward medical occurrence in a subject, temporally associated with the use of study intervention, whether or not considered related to the study intervention. Seriousness of an AE was assessed under the criteria of serious adverse event (SAE). An SAE was defined as any untoward medical occurrence that, at any dose: resulted in death; was life-threatening; required inpatient hospitalization or prolongation of existing hospitalization; resulted in persistent disability/incapacity; was a congenital anomaly/birth defect, etc. Treatment-emergent events were with onset date occurring during the on-treatment period. Relatedness to study treatment was determined by the investigator. Analysis population included all subjects taking at least 1 dose of study intervention.

End point title	Number of Subjects With Clinically Significant Abnormalities in Vital Signs
-----------------	---

End point description:

Oral, tympanic, or axillary temperature, pulse rate, respiratory rate, and blood pressure (BP) were assessed. BP and pulse measurements were assessed in a chair, back supported and arms bared (free of restrictions such as rolled-up sleeves, etc) and supported at heart level. Measurements were taken on the same arm at each visit (preferably non-dominant) with a completely automated device. Pulse rate was measured at approximately the same time as BP for a minimum of 30 seconds. BP and pulse measurements should be preceded by at least 5 minutes of rest for the subject in a quiet setting without distractions (eg, television, cell phones). Subjects refrained from smoking or ingesting caffeine during the 30 minutes preceding the measurements. The clinical significance was determined by the investigator. Analysis population included all subjects taking at least 1 dose of study intervention.

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 April 2021	Updated Schedule of Activities and Section 4.1 Study Design; revised Inclusion and Exclusion Criteria; Section 6.2.1 Preparation and Dispensing was updated to add that at the EOP visit; updated Section 6.5.3 Vaccinations, Section 8.2.6 Audiological Evaluations, Section 8.2.7 Brainstem Auditory Evoked Potential Evaluations, Section 8.2.10.1.3 Subsequent Tuberculosis Testing, Section 8.2.11.1. Columbia Suicide Severity Rating Scale (C-SSRS); Section 8.2.9.2.2 Canfield Rash Manual was updated to Canfield Photography User Manual; In Section 8.2.14 The name of the 'Rater Qualifications Manual' was updated to 'Rater Assessment Manual'; Section 8.3.6 Cardiovascular and Death Events, was updated to reflect the adjudication process; Section 8.3.8 Adverse Events of Special Interest, was updated to add a reference to the section with the definition and the reporting process; deleted Section 8.10 Health Economics; updated Appendix 4, 6, 7, 9.
28 April 2022	In order to allow study subjects continued access to study intervention with collection of additional long-term safety and efficacy data, study duration was extended up to 60 months (or until availability of commercial product in the country or until the sponsor terminates the study in that country). The endpoints were updated as a result of the study extension. Added ECG analysis under safety endpoints at TP1 and TP2 phases only. Added detail on permanent discontinuation and defined the Observation Period. Update was made in alignment with Investigator Brochure version 8.0 December 2021, and also to clarify the safety of PF-06651600. Update was made to clarify the safety of PF-06651600. Mean Clinical AUC and Calculated Safety Margin updated. Added additional clarifications on the contraception check. Updated the blinding approach in the study. Updated the amount of blood to be collected from each subject. Clarified when an interim analysis may be needed. Updated language regarding events requiring submission to an adjudication/review committee, and text regarding confirmation of post-menopausal status during the study. Updated hemoglobin values requiring re-testing in Table 3.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study is still ongoing. This report reflects data collected up to the data-cut on 19 May 2023, and will be updated after completion of the whole study.
