Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002063-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 April 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 March 2025
Global end of trial reached?	Yes
Global end of trial date	20 March 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This was a randomised, double-blind, double dummy, parallel group, multicenter 24 to 52 week variable length study to assess the efficacy and safety of budesonide, glycopyrronium, and formoterol fumarate metered dose inhaler (MDI) relative to budesonide and formoterol fumarate MDI and Symbicort® pressurized MDI in adult and adolescent participants with inadequately controlled asthma.

Protection of trial subjects:

The protocol, protocol amendments, informed consent form (ICF), and other relevant documents (e.g., advertisements) were submitted to an Institutional Review Board/Independent Ethics Committee (IRB/IEC) by the Investigator and reviewed and approved by the IRB/IEC before the study was initiated. The Investigator or their representative explained the nature of the study to the participant or their legally authorised representative and answered all questions regarding the study. Participants were informed that their participation was voluntary. Participants or their legally authorised representative were required to sign a statement of informed consent that met the requirements of 21 CFR 31.23, local regulations, ICH guidelines, Health Insurance Portability and Accountability Act (HIPAA) requirements, where applicable, and the IRB/IEC or study center. The authorised person obtaining the informed consent must have also signed the ICF. Participants must have been re-consented to the most current version of the ICF(s) during their participation in the study.

Background therapy:

Participants eligible for this study were required to be on a stable regimen of an inhaled asthma maintenance therapy defined as an Inhaled Corticosteroid (ICS)/Long-Acting β_2 -Agonist (LABA) for at least 4 weeks prior to Visit 1. After meeting all eligibility criteria, participants discontinued their medium or high dose ICS/LABA at Visit 1 and initiated run-in BFF MDI 320/9.6 μ g taken BID until the evening prior to Visit 5 (randomisation) when the run-in BFF MDI was discontinued. All participants received albuterol sulfate inhalation aerosol or salbutamol sulfate inhalation aerosol, hereinafter referred to as albuterol, at Visit 1 for rescue use during the study.

Evidence for comparator: -

Actual start date of recruitment	01 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	58
Adults (18-64 years)	1687
From 65 to 84 years	422
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 2187 subjects were randomised at 324 study centers in 15 countries from 01 March 2021. The last subject completed their last study visit on 20 March 2025. Of the 2187 randomised subjects, 2167 received treatment; all populations excluded 16 subjects due to GCP violations and 4 subjects due to not receiving study therapy.

Pre-assignment

Screening details:

Adult and adolescent subjects with inadequately controlled moderate to severe asthma were randomised to 1 of 4 groups: BGF MDI 320/28.8/9.6 µg, BGF MDI 320/14.4/9.6 µg, BFF MDI, and Symbicort pMDI. Those who were eligible for the study discontinued their medium or high dose ICS/LABA at Visit 1 and initiated run-in BFF MDI until randomisation.

Period 1

Period 1 title	24 to 52-Wk Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

All participants were centrally assigned to 1 of 4 randomised study interventions using a Randomisation and Trial Supply Management (RTSM). Before the study was initiated, the log-in information and directions for the RTSM were provided to each site.

Arms

Are arms mutually exclusive?	Yes
Arm title	BGF MDI 320/14.4/9.6 µg BID

Arm description:

Budesonide, Glycopyrronium, and Formoterol Fumarate (BGF) metered-dose inhaler (MDI), 320/14.4/9.6 µg BID

Arm type	Experimental
Investigational medicinal product name	Budesonide, glycopyrronium, and formoterol fumarate pressurised inhalation suspension, desiccated flow path device
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Pressurised inhalation
Routes of administration	Inhalation use

Dosage and administration details:

Two inhalations BID of 160/7.2/4.8 µg per actuation. Total daily dose: 640/28.8/19.2 µg.

Arm title	BGF MDI 320/28.8/9.6 µg BID

Primary: Pooled (LOGOS/KALOS): Rate of severe asthma exacerbations

End point title	Pooled (LOGOS/KALOS): Rate of severe asthma exacerbations
End point description: Rate of severe asthma exacerbations was assessed in a pre-specified pooled analysis across replicate studies D5982C00008 and D5982C00007 (2020-001520-34). An asthma exacerbation was severe if it resulted in at least 1 of the following: a course of systemic corticosteroids for 3 days to treat symptoms of asthma worsening, an ER/urgent care visit that required treatment with systemic corticosteroids, an inpatient hospitalisation, or death related to asthma. Consecutive exacerbations with start/stop days ≤7 days apart were considered the same event of the highest severity. Treatment policy was implemented to handle all ICEs with the exception of initiation of new asthma therapy or use of prohibited medications thought to impact efficacy in conjunction with premature discontinuation of study intervention, for which the composite strategy was implemented.	
End point type	Primary

Statistical analyses

Statistical analysis title	Rate of Severe Asthma Exacerbations
Statistical analysis description:	
The analysis for rate ratio used a negative binomial regression. Treatments were compared adjusting for baseline trough FEV1, percent reversibility, baseline severe asthma exacerbation history (0, 1, ≥ 2), prior ICS dose (medium vs. high), region, and study.	
Comparison groups	Pooled (LOGOS/KALOS) BGF MDI 320/28.8/9.6 μg BID v Pooled (LOGOS/KALOS) BFF MDI or Symbicort pMDI BID
Number of subjects included in analysis	1231
Analysis specification	Pre-specified
Analysis type	superiority ^[37]
P-value	= 0.058 ^[38]
Method	Negative binomial regression
Parameter estimate	Rate ratio
Point estimate	0.831
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.686
upper limit	1.006

Notes:

[37] - A rate ratio below 1 favors study drug. Number of subjects analysed is based on the Efficacy Set, which excluded 7 subjects who were randomised multiple times. Only subjects with nonmissing covariates were included in the analysis.

[38] - Statistically significant per the Type I error control procedure.

Secondary: Pooled (LOGOS/KALOS): Rate of severe asthma exacerbations for participants with ≥ 1 severe exacerbation in the 12 months prior to Visit 1

End point title	Pooled (LOGOS/KALOS): Rate of severe asthma exacerbations for participants with ≥ 1 severe exacerbation in the 12 months prior to Visit 1
-----------------	--

End point description:

Rate of severe asthma exacerbations for participants with ≥ 1 severe exacerbation in the 12 months prior to Visit 1 was assessed in a pre-specified pooled analysis across replicate studies D5982C00008 and D5982C00007 (2020-001520-34). An asthma exacerbation was severe if it resulted in at least 1 of the following: a course of systemic corticosteroids for 3 days to treat symptoms of asthma worsening, an ER/urgent care visit that required treatment with systemic corticosteroids, an inpatient hospitalisation, or death related to asthma. Consecutive exacerbations with start/stop days ≤ 7 days apart were considered the same event of the highest severity. Treatment policy was implemented to handle all ICEs with the exception of initiation of new asthma therapy or use of prohibited medications thought to impact efficacy in conjunction with premature discontinuation of study intervention, for which the composite strategy was implemented.

End point description:

Percentage of responders in the AQLQ(s)+12 (≥0.5 increase equals response) over 24 weeks was assessed in a pre-specified pooled analysis across replicate studies D5982C00008 and D5982C00007 (2020-001520-34). Treatment policy was implemented to handle all ICEs with the exception of initiation of new asthma therapy or use of prohibited medications thought to impact efficacy in conjunction with premature discontinuation of study intervention, for which the composite strategy was implemented.

End point type	Secondary
----------------	-----------

End point timeframe:

Over 24 weeks

End point values	Pooled (LOGOS/KALOS) BGF MDI 320/14.4/9.6 µg BID	Pooled (LOGOS/KALOS) BGF MDI 320/28.8/9.6 µg BID	Pooled (LOGOS/KALOS) BFF MDI or Symbicort pMDI BID	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	695	1124	2290 ^[71]	
Units: Responders				
number (not applicable)				
Number of responders	415	654	1293	
Percentage (%)	59.7	58.2	56.5	

Notes:

[71] - N=2400; 1192 subjects from D5982C00008 (LOGOS) and 1208 subjects from D5982C00007 (KALOS)

Statistical analyses

Statistical analysis title	Pooled Percentage of Responders in AQLQ(s)+12
Statistical analysis description:	
The logistic regression model included treatment, study, and prior ICS dose (medium vs. high) as categorical covariates and baseline AQLQ(s)+12 score, baseline trough FEV1, and percent reversibility as continuous covariates.	
Comparison groups	Pooled (LOGOS/KALOS) BGF MDI 320/28.8/9.6 µg BID v Pooled (LOGOS/KALOS) BFF MDI or Symbicort pMDI BID
Number of subjects included in analysis	3414
Analysis specification	Pre-specified
Analysis type	superiority ^[72]
P-value	= 0.215 ^[73]
Method	Regression, Logistic
Parameter estimate	Odds ratio (OR)
Point estimate	1.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.94
upper limit	1.29

Notes:

[72] - An odds ratio >1 for the comparison favors study drug. Number of subjects analysed based on the Efficacy Set, which excluded 7 subjects who were randomised multiple times. Only subjects with nonmissing covariates were included in the analysis.

[73] - Endpoint not included in the Type I error control procedure.

Statistical analysis title	Pooled Percentage of Responders in AQLQ(s)+12
Statistical analysis description:	
The logistic regression model included treatment, study, and prior ICS dose (medium vs. high) as categorical covariates and baseline AQLQ(s)+12 score, baseline trough FEV1, and percent reversibility as continuous covariates.

[75] - Endpoint not included in the Type I error control procedure.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first intake of study intervention after Visit 1, during screening, and throughout the Treatment Period and including the follow-up period. Serious adverse events were recorded from the time of signing of the informed consent form.

Adverse event reporting additional description:

Adverse events were reported by the participant (or, when appropriate, by a caregiver, surrogate, or the participant's legally authorised representative). The Investigator and any designees were responsible for detecting, documenting, and recording events that met the definition of an AE.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 October 2020	Clarity was required for the Type 1 Error Control for each region, an equivalence table was added for oral corticosteroids in the treatment of asthma exacerbations, and contraceptive language was updated to address Europe's (EU) recommendation for contraception and pregnancy testing in clinical trials.
07 January 2022	An amendment was required due to recruitment challenges, and to make 1) updates to the inclusion and exclusion criteria, 2) adjustment to the multiple testing procedures, 3) a reduction in sample size, and 4) an update to the primary estimand for the US approach to address FDA recommendations.
21 February 2023	An amendment was required due to recruitment challenges, to make 1) an update to stop recruitment to the BGF MDI 320/14.4/9.6 µg treatment arm, 2) an update to the Type I error control procedure and power estimates, and 3) updates to statistical methodology, including changes to estimands, covariates in the analysis models, and populations for analyses.
19 November 2024	An amendment was required to update the statistical methodological approaches to handling intercurrent events and the Type I error control procedure for US, EU, China, and Japan health authorities.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Protocol amendments were instituted during the SARS-CoV-2 pandemic to facilitate recruitment, including removal of the history of exacerbation criteria and terminating recruitment to the BGF 320/14.4/9.6 µg treatment group.

Notes:
