

Clinical trial results:

A phase III, randomized, controlled, open-label, multicenter, global study of capmatinib versus SoC docetaxel chemotherapy in previously treated patients with EGFR wt, ALK negative, locally advanced or metastatic (stage IIIB/IIIC or IV) NSCLC harboring MET exon 14 skipping mutation (METex14).

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 November 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 November 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial was to compare the efficacy of capmatinib versus docetaxel. Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 September 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Brazil: 1
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	India: 3
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Korea, Republic of: 1
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Portugal: 1
Country: Number of subjects enrolled	Spain: 6
Worldwide total number of subjects	22
EEA total number of subjects	17

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	7
From 65 to 84 years	15
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All inclusion and exclusion criteria were checked at screening.

Period 1

Period 1 title	Randomized Treatment Phase (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Capmatinib

Arm description:

400 mg, capmatinib tablets, administered orally twice daily

Arm type	Experimental
Investigational medicinal product name	Capmatinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

400 mg, capmatinib tablets, administered orally twice daily

Arm title	Docetaxel
------------------	-----------

Arm description:

Docetaxel 75 mg/m² solution administered by intravenous infusion on Day 1 of every 21-day cycle

Arm type	Active comparator
Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel 75 mg/m² by intravenous infusion every 21 days

Number of subjects in period 1	Capmatinib	Docetaxel
Started	15	7
Treated	15	6
Completed	0	0
Not completed	15	7
Adverse event, serious fatal	-	1
Adverse event, non-fatal	3	1

Study terminated by sponsor	3	-
Progressive disease	9	4
Not treated (participant decision)	-	1

Baseline characteristics

End points

End points reporting groups

Reporting group title	Capmatinib
Reporting group description: 400 mg, capmatinib tablets, administered orally twice daily	
Reporting group title	Docetaxel
Reporting group description: Docetaxel 75 mg/m ² solution administered by intravenous infusion on Day 1 of every 21-day cycle	

Primary: Progression-free Survival (PFS) per Blinded Independent Review Committee (BIRC) Using RECIST v1.1

End point title	Progression-free Survival (PFS) per Blinded Independent Review Committee (BIRC) Using RECIST v1.1 ^[1]
End point description: Progression-free survival was defined as the time from the date of randomization to the date of the first documented progressive disease (PD) as assessed by BIRC according to RECIST 1.1, or death due to any cause. PD=At least a 20% increase in the sum of diameter of all measured target lesions, taking as reference the smallest sum of diameter of all target lesions recorded at or after baseline. In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm ² . PFS was censored at the date of the last adequate tumor assessment, if no PFS event was observed prior to the analysis cut-off date.	
End point type	Primary
End point timeframe: From randomization to the date of first documented progression or death from any cause, whichever came first, assessed up to approximately 21 months	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Descriptive statistics are reported.

Secondary: Change from Baseline in Score as per European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Questionnaire (QLQ)-C30

End point title	Change from Baseline in Score as per European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Questionnaire (QLQ)-C30
-----------------	---

End point description:

EORTC-QLQ-C30 is a 30-item questionnaire developed to assess the quality of life of cancer patients. The questionnaire is composed of both multi-item scales and single-item measures based on the participants experience over the past week. These include five domains (physical, role, emotional, cognitive and social functioning), three symptom scales (fatigue, nausea/vomiting, and pain), six single items (dyspnea, insomnia, appetite loss, constipation, diarrhea, and financial impact) and a global health status/HRQoL scale. All of the scales and single-item measures range in score from 0 to 100. A high scale score represents a higher response level. CFB = change from baseline.

End point type	Secondary

Secondary: Change from Baseline in Score as per European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Lung Cancer Module (QLQ-LC13)

End point title	Change from Baseline in Score as per European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Lung Cancer Module (QLQ-LC13)
-----------------	---

End point description:

EORTC QLQ-LC13 is a 13-item lung cancer specific questionnaire. The assessments here included coughing, hemoptysis, dyspnea, sore mouth, dysphagia, peripheral neuropathy, alopecia, pain in chest, pain in arm or shoulder, and pain in other parts and were based on their presence over the previous week. All but the pain domain were scored on a 4 point Likert scale ranging from "not at all" to "very much." Pain was scored based on its presence, yes or no. Scores were averaged and transformed to 0 to 100. A higher score indicated a higher presence of symptoms. CFB = change from baseline.

End point type	Secondary
End point timeframe:	
Baseline, Cycle (C) 3, Day (D) 1 and then every 6 weeks up to approximately 21 months, end of treatment, and 6, 12, and 18 weeks post treatment. Each cycle duration was 21 days.

Secondary: Change from Baseline in Score as per European Quality of Life 5-Dimension 5-Level (EQ-5D-5L) Questionnaire

End point title	Change from Baseline in Score as per European Quality of Life 5-Dimension 5-Level (EQ-5D-5L) Questionnaire
-----------------	--

End point description:

EQ-5D-5L is a standardized measure to assess the overall health-related quality of life in patients. The EQ-5D-5L consists of 2 parts– the descriptive system and the EQ visual analogue scale (EQ VAS). The descriptive system comprises 5 dimensions (mobility, self-care, usual activities, pain/discomfort, and anxiety/depression), each with 5 levels: from 1 (no problems) to 5 (extreme problems). The EQ VAS is a self-perceived health score assessed using a visual analogue scale that ranges from 0 (the worst imaginable health) to 100 (the best imaginable health), with higher scores indicating higher health utility. CFB = change from baseline.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Cycle (C) 3, Day (D) 1 and then every 6 weeks up to approximately 21 months, end of treatment, and 6, 12, and 18 weeks post treatment. Each cycle duration was 21 days.

Secondary: Time to Symptom Deterioration for Chest Pain, Cough and Dyspnea Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Lung Cancer Module (QLQ-LC13)

End point title	Time to Symptom Deterioration for Chest Pain, Cough and Dyspnea Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Lung Cancer Module (QLQ-LC13)
-----------------	---

End point description:

EORTC QLQ-LC13 is a 13-item lung cancer specific questionnaire. The assessments here included chest pain, cough, and dyspnea and were based on their presence over the previous week. All but the pain domain were scored on a 4 point Likert scale ranging from "not at all" to "very much." Pain was scored based on its presence, yes or no. Scores were averaged and transformed to 0 to 100. A higher score indicated a higher presence of symptoms. Time to symptom deterioration for chest pain, cough and dyspnea was assessed. Deterioration was assessed by the investigator.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle (C) 1 Day (D) 1, C3 D1 and then every 6 weeks up to approximately 21 months, end of treatment and 6, 12, 18 weeks post treatment. Each cycle duration was 21 days.

End point values	Capmatinib	Docetaxel		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	7		
Units: months				
median (confidence interval 95%)				
Coughing	13.9 (2.76 to 999)	2.9 (1.38 to 999)		
Dyspnea	5.7 (2.76 to 999)	2.9 (1.38 to 999)		
Pain in chest	11.1 (2.76 to 999)	2.9 (1.45 to 999)

Secondary: Time to Deterioration for Global Health Status /QoL Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Questionnaire (QLQ)-C30

End point title	Time to Deterioration for Global Health Status /QoL Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Questionnaire (QLQ)-C30
-----------------	---

End point description:

EORTC-QLQ-C30 is a 30-item questionnaire developed to assess the quality of life of cancer patients. The questionnaire is composed of both multi-item scales and single-item measures based on the participants experience over the past week. These include five domains (physical, role, emotional, cognitive and social functioning), three symptom scales (fatigue, nausea/vomiting, and pain), six single items (dyspnea, insomnia, appetite loss, constipation, diarrhea and financial impact) and a global health status/HRQoL scale. All of the scales and single-item measures range in score from 0 to 100. A high scale score represents a higher response level.

Time to deterioration in QoL from EORTC-QLQ-C30 was assessed. Deterioration was assessed by the investigator.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle (C) 1 Day (D) 1, C3 D1 and then every 6 weeks up to approximately 21 months, end of treatment and 6, 12, 18 weeks post treatment. Each cycle duration was 21 days.

End point values	Capmatinib	Docetaxel		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	7		
Units: months				
median (confidence interval 95%)	999 (2.92 to 999)	999 (1.38 to 999)

Post-hoc: All Collected Deaths

End point title	All Collected Deaths
-----------------	----------------------

End point description:

On-treatment deaths due to any cause were collected from first dose of study medication to 30 days after the last dose of study treatment. Post-treatment survival follow-up deaths were collected from Day 31 after last dose of study medication to the data cut-off date.

End point type	Post-hoc
----------------	----------

End point timeframe:

On-treatment deaths: Up to approximately 117 weeks. Post-treatment survival follow-up deaths: Up to an additional 36 weeks.

End point values	Capmatinib	Docetaxel		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	6		
Units: Participants				
On-treatment deaths	2	0		
Post-treatment deaths	7	5		
All deaths	9	5

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From day of first dose of study medication to last dose of study medication plus 30 days, up to approximately 117 weeks.

Adverse event reporting additional description:

Any sign or symptom that occurred during the conduct of the trial and safety follow-up.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 December 2020	This amendment included the following changes: Collection of post-progression patient-reported outcomes (PRO) were allowed to capture additional cancer related symptoms; mitigation procedures were added to ensure patient safety and trial integrity in the event of public emergencies such as COVID-19; the primary estimand-related attributes were rephrased to align with capmatinib program protocol standard language; comparison of overall response rate of capmatinib and docetaxel was set as key secondary objective as this would support the assessment of clinical benefit and the interpretation of the primary endpoint results; MET (and ALK, if applicable) testing while participant was still receiving anti-cancer therapy at pre-screening was allowed to facilitate recruitment; Novartis guidelines on Response Assessment in Neuro-oncology (RANO) for brain metastases were added as Appendix 2 to the protocol to support the secondary endpoint assessing intracranial anti-tumor activity of capmatinib in participants with central nervous system (CNS) lesions by blinded independent review committee (BIRC). The definitions of time-to-intracranial response (TTIR) and duration of intracranial response (DOIR) were updated accordingly.
24 February 2022	This amendment included the following changes: MET mutation status - to allow local results also from a validated test according to local regulation and documented as part of the participant's medical record to be used for participant eligibility; serious adverse event (SAE)-reporting - immediate reporting clarified to align with health authority (especially with Federal Institute for Drugs and Medical Devices [BfArM]) requirements.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results.

Notes:
