

## Clinical trial results:

**A two-year multi-center Phase 3 study to investigate the efficacy and safety of secukinumab in adult patients with active, moderate to severe thyroid eye disease (ORBIT), with a randomized, parallel-group, double-blind, placebo-controlled, 16-week treatment period, and a follow-up/retreatment period**

### Summary

EudraCT number	2020-001611-24
Trial protocol	DE
Global end of trial date	16 May 2023

### Results information

Result version number	v2 (current)
This version publication date	26 February 2025
First version publication date	30 May 2024
Version creation reason	

### Trial information

#### Trial identification

Sponsor protocol code	CAIN457ADE16
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04737330
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 May 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 May 2023
Global end of trial reached?	Yes
Global end of trial date	16 May 2023
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to demonstrate that secukinumab was superior to placebo with regard to the overall responder rate after 16 weeks of treatment.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 November 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 28
Worldwide total number of subjects	28
EEA total number of subjects	28

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	24
From 65 to 84 years	4
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted at 5 centers in Germany.

### Pre-assignment

Screening details:

Eligible participants were randomized in a 1:1 ratio to one of the following double-blinded treatment arms: Secukinumab 300 mg (arm 1) and Placebo (arm 2).

### Period 1

Period 1 title	Treatment period (Baseline to Week 16)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Secukinumab 300 mg

Arm description:

Secukinumab 300 mg subcutaneous (s.c.) injection at Baseline, Week 1, Week 2, Week 3, Week 4, Week 8, Week 12

Arm type	Active comparator
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	
Other name	AIN457
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Secukinumab 300 mg subcutaneous (s.c.) injection at Baseline, Week 1, Week 2, Week 3, Week 4, Week 8, Week 12

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Placebo subcutaneous (s.c.) injection at Baseline, Week 1, Week 2, Week 3, Week 4, Week 8, Week 12

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo subcutaneous (s.c.) injection at Baseline, Week 1, Week 2, Week 3, Week 4, Week 8, Week 12

Number of subjects in period 1	Secukinumab 300 mg	Placebo
Started	14	14
Completed	12	12
Not completed	2	2
Study terminated by sponsor	1	2
Lost to follow-up	1	-

## Period 2

Period 2 title	Follow-up period (Week 16 to Week 108)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Secukinumab 300 mg

### Arm description:

Secukinumab 300 mg subcutaneous (s.c.) injection at Baseline, Week 1, Week 2, Week 3, Week 4, Week 8, Week 12

Arm type	Active comparator
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	
Other name	AIN457
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

### Dosage and administration details:

Secukinumab 300 mg subcutaneous (s.c.) injection at Baseline, Week 1, Week 2, Week 3, Week 4, Week 8, Week 12

<b>Arm title</b>	Placebo
------------------	---------

### Arm description:

Placebo subcutaneous (s.c.) injection at Baseline, Week 1, Week 2, Week 3, Week 4, Week 8, Week 12

Arm type	Placebo

### Primary: Plan A - Percentage of participants achieving overall response

End point title	Plan A - Percentage of participants achieving overall response <sup>[1]</sup>
End point description: The percentage of participants achieving overall response was defined as follows: $\geq 2$ points reduction in clinical activity score (CAS) AND $\geq 2$ mm reduction in proptosis from Baseline in the study eye, provided there was no corresponding deterioration in CAS or proptosis ( $\geq 2$ point or 2 mm increase, respectively) in the fellow eye after 16 weeks of treatment. Due to premature study discontinuation, purely descriptive analyses were performed for the primary endpoint.	
End point type	Primary
End point timeframe: Baseline, Week 16	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to premature study discontinuation, purely descriptive analyses were performed for the primary endpoint.

End point values	Secukinumab 300 mg	Placebo

[4] - Due to premature study discontinuation, only Plan A was conducted (Plan B was not initiated)

## Statistical analyses

No statistical analyses for this end point

## Secondary: Plan A - Mean change from Baseline to Week 16 in clinical activity score (CAS) in the study eye

End point title	Plan A - Mean change from Baseline to Week 16 in clinical activity score (CAS) in the study eye
-----------------	---

### End point description:

Thyroid Eye Disease (TED) activity was assessed using the CAS at the frequency indicated in the study schedule based on the following signs and symptoms in accordance with the European Group on Graves' Orbitopathy (EUGOGO) guideline:

#### • Symptoms

- ~ Spontaneous retrobulbar pain
- ~ Pain on attempted upward or downward gaze

#### • Signs

- ~ Redness of eyelids
- ~ Redness of conjunctiva
- ~ Swelling of caruncle or plica
- ~ Swelling of eyelids
- ~ Swelling of conjunctiva (chemosis)

For each item present, 1 point is given. The sum of these points is the CAS score, i.e., minimum score of 0 and maximum score of 7.

- Inactive TED: CAS < 3.
- Active TED: CAS  $\geq 3$ .

## Secondary: Plan B - Percentage of participants achieving response in reduction of clinical activity score (CAS)

End point title	Plan B - Percentage of participants achieving response in reduction of clinical activity score (CAS)
End point description: The percentage of participants achieving response in reduction of CAS at Week 16 was defined as follows: reduction of $\geq 2$ points from Baseline in the study eye without deterioration ( $\geq 2$ points increase) of CAS in the fellow eye. Due to premature study discontinuation, only Plan A was conducted (Plan B was not initiated) for the secondary endpoint.	
End point type	Secondary
End point timeframe: Baseline, Week 16	

End point values	Secukinumab 300 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 <sup>[15]</sup>	0 <sup>[16]</sup>		
Units: Participants				

Notes:

[15] - Due to premature study discontinuation, only Plan A was conducted (Plan B was not initiated)

[16] - Due to premature study discontinuation, only Plan A was conducted (Plan B was not initiated)

## Statistical analyses

No statistical analyses for this end point

## Secondary: Plan B - Percentage of participants achieving overall response

End point title	Plan B - Percentage of participants achieving overall response
End point description: The percentage of participants achieving overall response was defined as follows: $\geq 2$ points reduction in CAS AND $\geq 2$ mm reduction in proptosis from Baseline in the study eye, provided there was no corresponding deterioration in CAS or proptosis ( $\geq 2$ point or 2 mm increase, respectively) in the fellow eye after 16 weeks of treatment. Due to premature study discontinuation, only Plan A was conducted (Plan B was not initiated) for the secondary endpoint.	
End point type	Secondary
End point timeframe: Baseline, Week 16	

End point values	Secukinumab 300 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 <sup>[17]</sup>	0 <sup>[18]</sup>		
Units: Participants				

Notes:

[17] - Due to premature study discontinuation, only Plan A was conducted (Plan B was not initiated)

[18] - Due to premature study discontinuation, only Plan A was conducted (Plan B was not initiated)

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

AEs are presented for the double-blind treatment period (16 weeks) and for the follow-up/open-label re-treatment period, including AEs in FUP for all patients who received at least one dose of Secukinumab during the entire study up (maximum of 108 weeks).

Adverse event reporting additional description:

The safety analysis were done on the safety population, which included all randomized subjects who received at least one dose of study medication.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 August 2021	Amended Protocol Version 01: The main purpose of this amendment is to add additional ophthalmological assessments to the study protocol. Exclusion criterion #13 was specified by the addition of a wash-out period for the prior use of oral corticosteroids. For patients who prematurely discontinue the study or study treatment, the follow-up assessment 12 weeks after last administration of study treatment was amended to an End of Study (EOS) visit which includes safety and efficacy assessments and will be recorded in the eCRF in order to increase data consistency and to comply with current Novartis standards. Furthermore, minor clarifications and corrections of certain aspects and procedures as well as changes to correct formatting errors and administrative inconsistencies were made where applicable. At the time of the amendment, no patients had been screened for inclusion.
15 March 2022	Amended Protocol Version 02: The main purpose of this amendment is to provide clarification of wording for inclusion criterion 6 and for the requirement of patients to be fasting prior to laboratory assessments. Furthermore, information was added that live vaccinations should not be given until 12 weeks after last study treatment administration to comply with current Novartis standards.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
