

Clinical trial results:

A randomised double-blind placebo-controlled trial of Brensocatib (INS1007) in patients with severe COVID-19

Summary

EudraCT number	2020-001643-13
Trial protocol	GB
Global end of trial date	28 February 2021

Results information

Result version number	v1 (current)
This version publication date	28 March 2023
First version publication date	28 March 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 November 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 February 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The overall objective of the study is to evaluate the clinical efficacy of Brensocatib compared to placebo on top of standard care in adult patients hospitalized with COVID-19

Protection of trial subjects:

Participants (or legally authorized representative) were required to provide written informed consent. Participants were excluded if alanine aminotransferase (ALT) and/or aspartate aminotransferase (AST) > 5 times the upper limit of normal, history of severe liver disease, absolute neutrophil count $<1.0 \times 10^9$ cells/L, were currently treated with Itraconazole, Ketoconazole, diltiazem or verapamil, were pregnant or breast feeding.

Background therapy:

Patients in both arms received all other therapies required to manage their condition (standard of care) with the exception of other investigational products. Where participants had been enrolled into the RECOVERY (Randomised Evaluation of COVID-19 Therapy) trial and had been randomised to the standard care arm, co-enrolment to the STOP-COVID19 trial was allowed. Co-enrolment into RECOVERY RS (Respiratory support) a non-CTIMP intervention trial was allowed. Co-enrolment to other CTIMPs or non-CTIMP intervention trials was not be allowed.

Evidence for comparator:

Neutrophil serine proteases (NSPs) are involved in the pathogenesis of severe COVID-19 infection and are increased in severe and fatal infection (Seren, 2021). Neutrophil elastase, proteinase-3 and cathepsin-G are activated during neutrophil maturation in the bone marrow through dipeptidyl peptidase 1 (DPP1; also known as cathepsin C), which removes the N-terminal dipeptide sequence of neutrophil serine proteases allowing active enzymes to be packaged into granules prior to release of neutrophils into the circulation.(Palmer et al., 2018) Brensocatib (INS1007, formerly AZD7986) is an orally delivered selective, competitive, and reversible inhibitor of DPP1. Brensocatib has been shown to inhibit neutrophil serine protease activity in blood in both animal models and healthy volunteers.(Palmer et al., 2018) We recently conducted a large phase 2 study of Brensocatib in patients with bronchiectasis designed to test if treatment with Brensocatib could reduce infective exacerbations and reduce neutrophil elastase activity in the lung in bronchiectasis patients. The study met its primary endpoint of time to first exacerbation and key secondary endpoint of the frequency of exacerbations as well as showing marked reductions in neutrophil elastase concentrations in sputum (Chalmers, 2020).

Actual start date of recruitment	11 May 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 404
--------------------------------------	---------------------

Worldwide total number of subjects	404
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	226
From 65 to 84 years	158
85 years and over	20

Subject disposition

Recruitment

Recruitment details:

A total of 406 participants were randomised into the study across the 14 participating UK centres. Participants were recruited between 05th June 2020 and 25th January 2021.

Pre-assignment

Screening details:

Patients were screened for eligibility up to 24 hours prior to randomization and patients meeting the eligibility criteria were randomized within 96 hours of admission to hospital for COVID-19. 406 participants were randomised. There were two post-randomisation exclusions due to ineligibility in the Brensocatib arm.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

Double-blind, placebo-controlled. Participants were allocated via the randomisation system to receive either active treatment or matching placebo. The active treatment/placebo were packaged and labelled so as to not identify the contents. Trial staff and participants were blind to the allocation received. The final unblinding of the treatment allocation occurred after the creation of a final locked database.

Arms

Are arms mutually exclusive?	Yes
Arm title	Brensocatib

Arm description:

Brensocatib 25mg once daily for 28 days

Arm type	Experimental
Investigational medicinal product name	INS1007
Investigational medicinal product code	
Other name	Brensocatib
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Brensocatib is an oral tablet with a strength dose of 25mg, administered once a day.

Arm title	Placebo
------------------	---------

Arm description:

Oral placebo tablet

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablet contains microcrystalline cellulose and sodium fumarate and is coated. Dosage is 25mg once daily

Number of subjects in period 1	Brensocatib	Placebo
Started	190	214
Completed	187	211
Not completed	3	3
Lost to follow-up	3	3

Adverse events

Adverse events information

Timeframe for reporting adverse events:

29 days

Adverse event reporting additional description:

Adverse events were reported by the participant, site principal investigators or delegated staff responsible for detecting documenting and recording events that met the definition of an adverse event. Participants discharged from hospital before the end of the trial were given a diary to record adverse events up to day 28. Site principal investigator

Assessment type	Systematic
