

Clinical trial results:

Interventional, Randomized, Double-blind, Parallel-group, Placebo-controlled Study to Evaluate the Efficacy and Safety of Eptinezumab for the Preventive Treatment of Migraine in Patients with a Dual Diagnosis of Migraine and Medication Overuse Headache

Summary

EudraCT number	2020-001669-35
Trial protocol	ES
Global end of trial date	30 September 2022

Results information

Result version number	v1 (current)
This version publication date	01 October 2023
First version publication date	01 October 2023

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 September 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 September 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to evaluate the efficacy of eptinezumab for the prevention of migraine and medication overuse headache.

Protection of trial subjects:

This study was conducted in compliance with Good Clinical Practice and in accordance with the ethical principles described in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 February 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 128
Country: Number of subjects enrolled	Spain: 28
Country: Number of subjects enrolled	Georgia: 9
Country: Number of subjects enrolled	Korea, Republic of: 18
Country: Number of subjects enrolled	Taiwan: 10
Worldwide total number of subjects	193
EEA total number of subjects	28

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	184
From 65 to 84 years	9

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

This study included 2 periods: Placebo-controlled Period - 12-week double-blind treatment period with placebo or eptinezumab 100mg followed by an Open-label Period - 12-week period with eptinezumab 100mg. A safety follow-up visit was conducted 20 weeks after the last investigational medicinal product administration.

Pre-assignment

Screening details:

193 participants were enrolled at sites in 5 countries.

Period 1

Period 1 title	Placebo-controlled (Weeks 1-12)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Eptinezumab

Arm description:

Participants received 100 mg eptinezumab by intravenous (IV) infusion at Baseline (Day 0)

Arm type	Experimental
Investigational medicinal product name	eptinezumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

100mg at Baseline (Day 0)

Arm title	Placebo
------------------	---------

Arm description:

Participants received matching placebo by IV infusion at Baseline (Day 0)

Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

100 mL 0.9% saline solution administered at Baseline (Day 0)

Number of subjects in period 1	Eptinezumab	Placebo
Started	93	100
Received at least 1 dose of study drug	93	100
Completed	81	83
Not completed	12	17
Consent withdrawn by subject	-	2
Adverse event, non-fatal	2	1
Other reasons	10	14

Period 2

Period 2 title	Open-label (Weeks 12-24)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Eptinezumab
-----------	-------------

Arm description:

Participants received 100 mg eptinezumab by IV infusion at Primary Outcome Visit (Week 12)

Arm type	Experimental
Investigational medicinal product name	eptinezumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

100mg at Primary Outcome Visit (Week 12)

Number of subjects in period 2	Eptinezumab
Started	164
Received at least 1 dose of study drug	162
Completed	137
Not completed	27
Consent withdrawn by subject	5
Adverse event, non-fatal	2
Other reasons	13
Lost to follow-up	2
Lack of efficacy	3

Not treated	2
-------------	---

Baseline characteristics

Reporting groups

Reporting group title	Eptinezumab
Reporting group description:	
Participants received 100 mg eptinezumab by intravenous (IV) infusion at Baseline (Day 0)	
Reporting group title	Placebo
Reporting group description:	
Participants received matching placebo by IV infusion at Baseline (Day 0)	

Reporting group values	Eptinezumab	Placebo	Total
Number of subjects	93	100	193
Age Categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	87	97	184
From 65-84 years	6	3	9
85 years and over	0	0	0
Age Continuous Units: years			
median	44	43.5	
full range (min-max)	19 to 70	19 to 71	-
Gender Categorical Units: Subjects			
Female	69	82	151
Male	24	18	42
Monthly Migraine Days (MMDs)			
The Full Analysis Set (FAS, n=190) included all participants who had a valid Baseline assessment and at least one valid post-baseline 4-week assessment of MMDs in Weeks 1-12.			
Units: days			
arithmetic mean	19.5	19.7	
standard deviation	± 3.6	± 3.8	-

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 September 2020	Deleted: the maximum number of White patients
25 January 2021	Deleted: exit interviews Made changes to the statistical methodology: <ul style="list-style-type: none">• added: efficacy analyses will be based on the FAS• included estimands Added: <ul style="list-style-type: none">• withdrawal criteria for patients who have anaphylactic reactions or other severe and/or serious hypersensitivity reactions• information on how to manage anaphylactic/hypersensitivity reactions• the possibility to collect additional blood specimens using immune response laboratory kits• follow-up of patients with elevated AST or ALT values Clarified: <ul style="list-style-type: none">• the acute medication allowed• the possibility for re-screening of patients affected by COVID-19
23 April 2021	Added that, per investigator judgement, it can be considered to perform additional immune response tests in accordance with local clinical practice, such as histamine, tryptase, immunoglobulin E, and complement components C3 and C4
29 October 2021	Updated the definition of a migraine day Made changes to the statistical methodology: <ul style="list-style-type: none">• updated: the definition of the FAS to reflect an update in the statistical methodology• primary analysis: updated to include estimands• exploratory analysis: replaced ANCOVA with MMRM, replaced the CMH test with logistic regression

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
