

Clinical trial results:

A Phase II, randomised, multi-centre placebo-controlled, double-blind study to investigate the safety of GS-248, and efficacy on Raynaud's phenomenon (RP) and peripheral vascular blood flow, in subjects with systemic sclerosis (SSc)

Summary

EudraCT number	2020-002081-13
Trial protocol	GB NL BE PL
Global end of trial date	15 June 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 October 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 June 2022
Global end of trial reached?	Yes
Global end of trial date	15 June 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the safety and efficacy of GS-248 versus placebo on RP in subjects with SSc.

Protection of trial subjects:

The first IMP administration was taken at the study site, under the supervision of the study staff. Patients were closely followed with regular safety blood samples taken, patients were asked about any adverse events at each visit and IMP accountability was checked at each visit.

Background therapy:

Subjects were permitted the following background vasodilatory treatment; Ca-blockers or PDE-5 inhibitors.

Evidence for comparator:

Not applicable

Actual start date of recruitment	29 December 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	Poland: 43
Country: Number of subjects enrolled	United Kingdom: 37
Country: Number of subjects enrolled	Belgium: 5
Worldwide total number of subjects	94
EEA total number of subjects	57

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	83
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

In addition to fulfilling all eligibility criteria, subjects must fulfil the following criteria to be randomised:

- ≥ 7 RP attacks during the last week of the run-in period as captured in the eDiary, with no more than 2 days without RP attacks.
- Compliance with the eDiary during the 7 most recent days prior to baseline (Visit 2), excluding the vi

Pre-assignment

Screening details:

The run-in period was 14-21 days prior to Day 1, Baseline visit (the first dose of IMP).

Pre-assignment period milestones

Number of subjects started	94
Number of subjects completed	69

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 2
Reason: Number of subjects	Violated inclusion/exclusion: 23

Period 1

Period 1 title	Treatment
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	GS-248

Arm description:

Allocated to receive active treatment, GS-248

Arm type	Experimental
Investigational medicinal product name	GS-248
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

GS-248, supplied as 40mg capsules. Each single dose consisted of 3 capsules constituting a total of 120mg.

The initial dose of IMP (120 mg once daily) was taken at the study site at Visit 2 under supervision of the investigator or qualified staff. Subsequent doses of IMP were self-administered by the subject, taken orally, once daily. The final dose of IMP was taken at the study site (Visit 4).

The IMP was administered with water, in the morning with food.

Arm title	Placebo
-----------	---------

Arm description:

Placebo arm

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo, supplied as capsules identical to GS-248.

The initial dose of placebo (3 capsules) was taken at the study site at Visit 2 under supervision of the investigator or qualified staff. Subsequent doses of placebo were self-administered by the subject, taken orally, once daily. The final dose of placebo was taken at the study site (Visit 4).

The placebo was administered with water, in the morning with food.

Number of subjects in period 1^[1]	GS-248	Placebo
Started	33	36
Completed	30	34
Not completed	3	2
Consent withdrawn by subject	2	-
Adverse event, non-fatal	1	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of patients enrolled worldwide is all patients who signed the ICF but the number of subjects in the baseline period is those who completed the pre-assignment period and were randomised.

Period 2

Period 2 title	Follow-Up
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	GS-248

Arm description:

Follow-up of those allocated to receive active treatment, GS-248

Arm type	Experimental
Investigational medicinal product name	GS-248
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Not applicable, no treatment was received during follow-up period

Arm title	Placebo
------------------	---------

Arm description:

Follow-up of those randomised to placebo arm

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Not applicable as no treatment received during follow-up period.

Number of subjects in period 2	GS-248	Placebo
Started	30	34
Completed	30	34

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All SAEs and AEs were to be collected from the signing of the ICF until the follow-up visit (Visit 5)

Adverse event reporting additional description:

An AE that occurs from first IMP dose until 7 days after last IMP dose was considered a Treatment Emergent AE regardless of the assessed relationship to the IMP. All other AEs reported after signed ICF but outside of the period specified above were considered non-treatment emergent.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 July 2020	The protocol has been updated to reflect following changes and for some minor administrative and clarification changes, including to the exclusion criteria. Secondary efficacy endpoints were updated: <ul style="list-style-type: none">- Mean change from baseline to week 4 in peripheral blood flow prior to cold challenge and IMP administration.- Mean change in peripheral blood flow from pre-IMP to post-IMP administration at Visit 2.- Mean change from baseline to week 4 in recovery of peripheral blood flow after cold challenge- Number of countries was updated for the conduct of the study.- Study assessment was updated to include PK sampling- Removed the inclusion criteria related to finger temperature- Exclusion Criterion for Cold Challenge was added- Definition of Prolonged QTcF interval was updated
01 September 2020	The protocol has been updated following requests from the MHRA and for some minor administrative changes WOCBP and Highly Effective Contraception was updated based on the request from MHRA WOCBP given home pregnancy test to be used 35-40 days after their last dose of IMP (Visit 4).
25 March 2021	The protocol has been updated to reflect following changes and for some minor administrative and clarification changes, including to the exclusion criteria. <ul style="list-style-type: none">- Visit 4, End of Treatment Visit, occurred on Day 28 (-2/+1 days), which was the day subjects took their final dose of IMP, to be administered at the study site- Mean change in recovery of peripheral blood flow after cold challenge from pre-IMP to post-IMP administration at Visit 2.- A COVID-19 vaccination considered a permitted concomitant medication and is therefore not contraindicated for use with GS-248.
10 December 2021	The protocol has been updated to reflect emerging data on GS-248 interaction with moderate and strong CYP3A4 inhibitors resulting in an additional exclusion criterion and addition of prohibited concomitant medications. Changes in the descriptions of analyses populations as well as some minor administrative updates have also been made. A safety measure added relating to results from a drug-drug interaction (DDI) clinical study with GS-248.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
20 April 2021	Subject recruitment was temporarily interrupted during summer months to protect data integrity and minimize influence of warmer weather on the efficacy outcome variables. No subjects were enrolled in the study between 20-April-2021 and 22-September-2021.	22 September 2021
