

## Clinical trial results: Efficacy and Safety Study of Vatiquinone for the Treatment of Mitochondrial Disease Subjects With Refractory Epilepsy (MIT-E) Summary

EudraCT number	2020-002100-39
Trial protocol	ES FR IT SE PL
Global end of trial date	27 December 2023

### Results information

Result version number	v2 (current)
This version publication date	07 February 2025
First version publication date	19 July 2024
Version creation reason	

### Trial information

#### Trial identification

Sponsor protocol code	PTC743-MIT-001-EP
-----------------------	-------------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04378075
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	PTC Therapeutics, Inc.
Sponsor organisation address	500 Warren Corp Centre Dr, Warren, United States, NJ 07059
Public contact	Medical Information, PTC Therapeutics, Inc., +011 44 1-866-562-4620, medinfo@ptcbio.com
Scientific contact	Medical Information, PTC Therapeutics International Limited, +353 19068700, medinfo@ptcbio.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001238-PIP02-20
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 February 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 December 2023
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to demonstrate the effect of vatiquinone (PTC743) on reduction in observable motor seizure frequency in participants with genetically confirmed mitochondrial disease, as assessed by a seizure diary.

Protection of trial subjects:

This study was designed and monitored in accordance with sponsor procedures, which comply with the ethical principles of Good Clinical Practice (GCP) as required by the major regulatory authorities, and in accordance with the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 September 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 31
Country: Number of subjects enrolled	Japan: 11
Country: Number of subjects enrolled	Poland: 8
Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	Sweden: 2
Country: Number of subjects enrolled	Italy: 1
Worldwide total number of subjects	68
EEA total number of subjects	22

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	5

months)	
Children (2-11 years)	47
Adolescents (12-17 years)	15
Adults (18-64 years)	1
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 82 participants were screened, of which 14 were not randomized due to screen failure.

### Period 1

Period 1 title	Double-blind (24 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Assessor, Subject

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Double-blind Period: Vatiquinone
------------------	----------------------------------

Arm description:

Participants received vatiquinone 15 milligrams (mg)/kilogram (kg) if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, 3 times per day (TID) for up to 24 weeks during the double-blind period.

Arm type	Experimental
Investigational medicinal product name	Vatiquinone
Investigational medicinal product code	
Other name	PTC743, EPI-743
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Vatiquinone was administered per the treatment arm description.

<b>Arm title</b>	Double-blind Period: Placebo
------------------	------------------------------

Arm description:

Participants received vatiquinone-matched placebo, administered orally, TID for up to 24 weeks during the double-blind period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Vatiquinone-matching placebo was administered per the treatment arm description

<b>Number of subjects in period 1</b>	Double-blind Period: Vatiquinone	Double-blind Period: Placebo
Started	34	34
Received at least 1 dose of study drug	34	34
Completed	28	29
Not completed	6	5
Adverse event, serious fatal	3	-
Consent withdrawn by subject	-	1
Adverse event, non-fatal	2	2
Other than specified	-	2
Protocol deviation	1	-

## Period 2

Period 2 title	Long-term Extension (48 Weeks)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Long-term Extension: Vatiquinone/Vatiquinone

### Arm description:

Participants who received vatiquinone for 24 weeks in the double-blind period continued to received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for 48 weeks during the long-term extension period.

Arm type	Experimental
Investigational medicinal product name	Vatiquinone
Investigational medicinal product code	
Other name	PTC743, EPI-743
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

### Dosage and administration details:

Vatiquinone was administered per the treatment arm description.

<b>Arm title</b>	Long-term Extension: Placebo/Vatiquinone
------------------	--

### Arm description:

Participants who received placebo for 24 weeks in the double-blind period, received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for 48 weeks during the long-term extension period.

Arm type	Experimental
Investigational medicinal product name	Vatiquinone
Investigational medicinal product code	
Other name	PTC743, EPI-743
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

### Dosage and administration details:

Vatiquinone was administered per the treatment arm description.

<b>Number of subjects in period 2</b>	Long-term Extension: Vatiquinone/Vatiquinone	Long-term Extension: Placebo/Vatiquinone
	Started	28
Completed	16	18
Not completed	12	11
Sponsor's decision	1	1
Adverse event, serious fatal	2	2
Other than specified	9	7
Lack of efficacy	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Double-blind Period: Vatiquinone
Reporting group description:	
Participants received vatiquinone 15 milligrams (mg)/kilogram (kg) if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, 3 times per day (TID) for up to 24 weeks during the double-blind period.	
Reporting group title	Double-blind Period: Placebo
Reporting group description:	
Participants received vatiquinone-matched placebo, administered orally, TID for up to 24 weeks during the double-blind period.	

Reporting group values	Double-blind Period: Vatiquinone	Double-blind Period: Placebo	Total
Number of subjects	34	34	68
Age Categorical			
Units: Subjects			

Age Continuous			
Units: years			
arithmetic mean	8.7	6.6	
standard deviation	± 5.34	± 4.84	-

Gender Categorical			
Units: Subjects			
Female	14	20	34
Male	20	14	34

Race			
Units: Subjects			
American Indian/Alaska Native	0	1	1
Asian	3	9	12
Black/African American	1	3	4
White/Caucasian	24	20	44
Other	1	0	1
Not Reported	5	1	6

Ethnicity			
Units: Subjects			
Hispanic or Latino	2	1	3
Not Hispanic or Latino	26	30	56
Not Reported	5	1	6
Unknown	1	2	3

Number of Observable Motor Seizures per 28 Days			
---	--	--	--

The 28-day motor seizure frequency in the double-blind period was calculated as the (number of motor seizures)/ (the number of valid days where motor seizure count information is present) \* 28 within the double-blind period.

Units: motor seizures/28 days			
median	112.5	237.0	
full range (min-max)	6 to 3139	15 to 2918	-

## End points

### End points reporting groups

Reporting group title	Double-blind Period: Vatiquinone
Reporting group description: Participants received vatiquinone 15 milligrams (mg)/kilogram (kg) if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, 3 times per day (TID) for up to 24 weeks during the double-blind period.	
Reporting group title	Double-blind Period: Placebo
Reporting group description: Participants received vatiquinone-matched placebo, administered orally, TID for up to 24 weeks during the double-blind period.	
Reporting group title	Long-term Extension: Vatiquinone/Vatiquinone
Reporting group description: Participants who received vatiquinone for 24 weeks in the double-blind period continued to received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for 48 weeks during the long-term extension period.	
Reporting group title	Long-term Extension: Placebo/Vatiquinone
Reporting group description: Participants who received placebo for 24 weeks in the double-blind period, received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for 48 weeks during the long-term extension period.	
Subject analysis set title	Overall Period: Vatiquinone/Vatiquinone
Subject analysis set type	Intention-to-treat
Subject analysis set description: Participants received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for up to 72 weeks.	
Subject analysis set title	Overall Period: Placebo/Vatiquinone
Subject analysis set type	Intention-to-treat
Subject analysis set description: Participants received vatiquinone-matched placebo, administered orally, TID for up to 24 weeks followed by vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for up to 48 weeks.	

### Primary: Percent Change From Baseline to Week 24 in the Number of Observable Motor Seizures per 28 Days During the Double-blind Period

End point title	Percent Change From Baseline to Week 24 in the Number of Observable Motor Seizures per 28 Days During the Double-blind Period
End point description: The 28-day motor seizure frequency in the double-blind period was calculated as the (number of motor seizures)/ (the number of valid days where motor seizure count information is present) * 28 within the double-blind period. The baseline of the seizure frequency used the 28 days observations immediately prior to treatment start date for this calculation. Intent-to-treat (ITT) population included all randomized participants who received at least 1 dose of treatment.	
End point type	Primary
End point timeframe: Baseline to Week 24

### **Secondary: Change From Baseline to Week 24 in Health-Related Quality of Life as Measured by the Care-Related Quality of Life of Informal Caregivers (CarerQoL-7D) Questionnaire Score in Double-blind Period**

End point title	Change From Baseline to Week 24 in Health-Related Quality of Life as Measured by the Care-Related Quality of Life of Informal Caregivers (CarerQoL-7D) Questionnaire Score in Double-blind Period
-----------------	---

End point description:

The CarerQoL-7D consists of 5 negative and 2 positive dimensions of providing informal care. The negative dimensions are relational problems, mental health problems, problems combining daily activities with care, financial problems and physical health problems because of providing informal care. The 2 positive dimensions are fulfilment from caregiving and support with lending care. For each dimension, there are 3 possible responses: no, some and a lot. Utility tariffs for CarerQoL have been developed to calculate a weighted sum score of CarerQoL-7D from the responses on the 7 dimensions, ranging from 0 (worst imaginable caregiving situation) to 100 (best imaginable caregiving situation), for which discrete choice experiments were used. Higher sum scores reflect better care-related quality of life. ITT population included all randomized participants who received at least 1 dose of treatment. 'Overall number of participants analyzed' = participants evaluable for this endpoint.

End point type	Secondary

### Secondary: Number of Participants with Motor Seizure Clusters in Overall Period

End point title	Number of Participants with Motor Seizure Clusters in Overall Period
-----------------	--

End point description:

Seizure clusters were defined by "too many to count" entries in the seizure diaries. The motor seizure clusters per 28 days in the overall period was calculated as the (number of motor seizure clusters)/(the number of valid days where motor seizure clusters count information was present) \* 28 within the overall period.

The baseline of the seizure frequency used the 28 days observations immediately prior to treatment start date for this calculation. ITT population included all randomized participants who received at least 1 dose of treatment.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline up to Week 77

Adverse event reporting additional description:

Double-blind phase: Safety analysis set included all randomized participants who received at least 1 dose of treatment.

On-Vatiquinone period: On-Vatiquinone safety analysis set included all randomized participants who received at least 1 dose of Vatiquinone anytime during the study.

Assessment type	Systematic

### Reporting groups

Reporting group title	Double-blind Period: Vatiquinone
-----------------------	----------------------------------

Reporting group description:

Participants received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for up to 24 weeks during the double-blind period.

Reporting group title	On-Vatiquinone Period: Placebo/Vatiquinone
-----------------------	--

Reporting group description:

Participants who received placebo for 24 weeks in the double-blind period, received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for 48 weeks during the long-term extension period.

Reporting group title	On-Vatiquinone Period: Vatiquinone/Vatiquinone
-----------------------	--

Reporting group description:

Participants who received vatiquinone for 24 weeks in the double-blind period continued to received vatiquinone 15 mg/kg if body weight <13 kg, and 200 mg if body weight ≥13 kg, administered orally, TID for 48 weeks during the long-term extension period.

Reporting group title	Double-blind Period: Placebo
-----------------------	------------------------------

Reporting group description:

Participants received vatiquinone-matched placebo, administered orally, TID for up to 24 weeks during the double-blind period.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 March 2020	The overall reason for this amendment was to change the name of the study Sponsor, subsequently the drug name, and to incorporate health authorities' feedback on the previous version of the protocol.
22 May 2020	The overall reasons for this amendment were to add urinalysis assessment and an additional pharmacokinetic (PK) timepoint and to give additional training for seizure diaries, if needed.
30 September 2020	The overall reasons for this amendment were to revise the electrocardiogram (ECG) collection schedule so as to time match it with the 4-hour postdose PK, to add PK samples to 4 hours postdose at Weeks 48 and 72, to revise the definition of compliance with study drug dosing, to separate the secondary endpoints into key and other endpoints, and refinement of statistical considerations.
31 March 2021	The overall reasons for this amendment were to add Pediatric Quality of Life Inventory (PedsQL) questionnaire at Weeks 24 and 72; revise the number of study sites from approximately 12 to approximately 30; clarify that historical electroencephalogram (EEG) may be within 6 months prior to the Screening Visit; revise inclusion and exclusion criteria to clarify genetic confirmation of mitochondrial disease, clarify use of antiepileptic drugs (AEDs), clarify aspartate aminotransferase (AST) and alanine aminotransferase (ALT) range for participants with underlying Alpers-Huttenlocher syndrome/DNA polymerase subunit gamma (POLG) subtypes, and clarify exclusion of artisanal (non-Epidiolex cannabidiol) cannabidiol; add a weight-based dosing table for study drug; and clarify that the statistical analysis plan (SAP) will be finalized prior to unblinding of the study and revise the text regarding the sample size and statistical powering.
04 June 2021	The overall reasons for this amendment were to clarify that male participants must use contraception and that all participants must use contraceptive measures from the time consent was signed until 30 days after treatment discontinuation and to add an appendix of prohibited medications.
06 January 2022	The overall reason for this amendment was to incorporate feedback from health authorities.

Notes:
