

Clinical trial results:

An open-label, adaptive randomized, controlled multicenter study to evaluate the efficacy and safety of RESP301 plus standard of care (SoC) compared to SoC alone in hospitalized participants with COVID-19 World Health Organization (WHO) grade 3 & 4 (NOCOv2)

Summary

EudraCT number	2020-002120-37
Trial protocol	GB
Global end of trial date	21 May 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 November 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 May 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate efficacy of RESP301 in preventing progression of hospitalized COVID-19 participants at level 3 or 4 in the modified WHO ordinal scale into higher levels.

Protection of trial subjects:

The protocol, protocol amendments, informed consent form (ICF), Investigator's Brochure (IB), and other relevant documents (e.g. advertisements) were submitted to an Institutional Review Board (IRB) or Independent Ethics Committee (IEC) by the Investigator and reviewed and approved by the IRB/IEC before the study was initiated.

This study was conducted in accordance with the protocol and with consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences (CIOMS) International Ethical Guidelines; Applicable International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines; Applicable laws and regulations. Overall conduct of the study at the site and adherence to requirements of 21 Code of Federal Regulations (CFR), ICH GCP guidelines, the IRB/IEC, European regulation 536/2014 for clinical studies (if applicable), and all other applicable local regulations.

The Investigator or his/her representative explained the nature of the study to the participant or his/her legally authorized representative and answered all questions regarding the study.

Participants were informed that their participation was voluntary. Participants or their legally authorized representative were required to sign a statement of informed consent that meets the requirements of 21 CFR 50, local regulations, ICH guidelines, Health Insurance Portability and Accountability Act requirements, where applicable, and the IRB/IEC or study center.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 19
Worldwide total number of subjects	19
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	15
From 65 to 84 years	3
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 2 centers in the United Kingdom (UK) that enrolled 19 participants from 29-Jul-2020 (first subject first visit) to 21-May-2021 (last subject's last visit).

Pre-assignment

Screening details:

The screening period was 2 days. All the study assessments were performed as per the schedule of assessment.

Participants were randomized in the ratio 2:1 to the investigational arm or the control arm either inhaled RESP301 in addition to the standard of care (SoC) or SoC alone.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This is open-label study.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	RESP301+SoC
------------------	-------------

Arm description:

Participants received inhaled RESP301 administered using a nebulizer three times a day (TID) for up to 10 days in addition to the standard of care (SoC).

Arm type	Experimental
Investigational medicinal product name	RESP301
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Participants received inhaled RESP301 administered using a nebulizer (6 mL; Delivered dose (62 mg) sodium nitrite (NaNO₂)) TID (every 8 hours) with at least 6 hours between 2 consecutive doses for up to 10 days.

Investigational medicinal product name	Standard of Care (SoC)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Participants received institutional SOC alone for the treatment of COVID-19.

Arm title	Standard of Care (SoC)
------------------	------------------------

Arm description:

Participants received institutional SOC alone for the treatment of COVID-19.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Standard of care (SoC)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Participants received institutional SoC for the treatment of COVID 19.

Number of subjects in period 1	RESP301+SoC	Standard of Care (SoC)
Started	14	5
Completed	10	4
Not completed	4	1
Consent withdrawn by subject	1	-
Lost to follow-up	3	1

Baseline characteristics

Reporting groups

Primary: Proportion of Participants Who Progress by at Least One Level Higher on the Modified WHO Ordinal Scale

End point title	Proportion of Participants Who Progress by at Least One Level Higher on the Modified WHO Ordinal Scale ^[1]
End point description:	
A modified WHO ordinal scale was used for consistency with the recent study in adults hospitalized with severe COVID-19, to record the participant's status at the time of assessment. The modified WHO ordinal scale included the following levels : 1 = Not hospitalized, no limitations on activities; 2= Not hospitalized, limitation on activities; 3= Hospitalized, not requiring supplemental oxygen; 4= Hospitalized, requiring supplemental oxygen; 5= Hospitalized, on non-invasive ventilation or high-flow oxygen devices; 6= Hospitalized, on invasive mechanical ventilation or extracorporeal membrane oxygenation (ECMO); 7= Death. Higher scores mean worse outcomes. The proportion of participants who progress by at least one level higher on the modified WHO ordinal scale was assessed. The intent-to-treat (ITT) population included all randomized participants.	
End point type	Primary
End point timeframe:	
Baseline, Day 2 and Day 3	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis is available for the primary endpoint.

Secondary: Change in National Early Warning Score (NEWS) 2 Symptom Score From Baseline Over Time

End point title	Change in National Early Warning Score (NEWS) 2 Symptom Score From Baseline Over Time
-----------------	---

End point description:

The NEWS is based on a simple aggregate scoring system in which a score is allocated to physiological measurements, already recorded in routine practice, when patients present to, or are being monitored in hospital. Six simple physiological parameters form the basis of the scoring system: 1. Respiration rate; 2. Oxygen saturation; 3. Systolic blood pressure; 4. Pulse rate; 5. Level of consciousness or new confusion; 6. Temperature.

Each score is 0–3 and individual scores are added together for an overall score. An additional two points are added if the patient is receiving oxygen therapy. The total possible score ranges from 0 to 20. The higher the score the greater the clinical risk. Higher scores indicate the need for escalation, medical review and possible clinical intervention, and more intensive monitoring.

Justification: 9999.9999 is an arbitrary number that refers to 0 participant being present in the arm for specific timepoints; data was not available.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From screening to safety follow up (30 days)

Adverse event reporting additional description:

Severe AEs is defined as an event that prevents normal everyday activities. An AE that is assessed as severe should not be confused with an SAE. Severe is a category utilized for rating the intensity of an event; and both AE and SAE can be assessed as severe.

Assessment type	Non-systematic

Reporting groups

Reporting group title	RESP301+SoC
-----------------------	-------------

Reporting group description:

Participants received inhaled RESP301 administered using a nebulizer three times a day (TID) for up to 10 days in addition to the standard of care (SoC).

Reporting group title	Standard of Care (SoC)
-----------------------	------------------------

Reporting group description:

Participants received institutional SOC alone for the treatment of COVID-19.

Serious adverse events	RESP301+SoC	Standard of Care (SoC)	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 14 (0.00%)	0 / 5 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	RESP301+SoC	Standard of Care (SoC)	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	10 / 14 (71.43%)	2 / 5 (40.00%)	
Investigations			
Oxygen Saturation Decreased			
subjects affected / exposed	2 / 14 (14.29%)	0 / 5 (0.00%)	
occurrences (all)	3	0	
Liver Function Test Increased			
subjects affected / exposed	1 / 14 (7.14%)	0 / 5 (0.00%)	
occurrences (all)	1	0	

Lymphocyte Count Decreased subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Nervous system disorders			
Headache subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	1 / 5 (20.00%) 1	
Loss Of Consciousness subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Paraesthesia subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
General disorders and administration site conditions			
Chest pain subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Non-Cardiac Chest Pain subjects affected / exposed occurrences (all)	0 / 14 (0.00%) 0	1 / 5 (20.00%) 1	
Oedema subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Peripheral swelling subjects affected / exposed occurrences (all)	0 / 14 (0.00%) 0	1 / 5 (20.00%) 1	
Gastrointestinal disorders			
Constipation subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	1 / 5 (20.00%) 1	
Abdominal Pain subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Diarrhoea subjects affected / exposed occurrences (all)	0 / 14 (0.00%) 0	1 / 5 (20.00%) 1	

Vomiting subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	1 / 5 (20.00%) 1	
Oropharyngeal discomfort subjects affected / exposed occurrences (all)	2 / 14 (14.29%) 2	0 / 5 (0.00%) 0	
Dyspnoea subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Epistaxis subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Haemoptysis subjects affected / exposed occurrences (all)	0 / 14 (0.00%) 0	1 / 5 (20.00%) 1	
Oropharyngeal pain subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Wheezing subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Musculoskeletal and connective tissue disorders Back pain subjects affected / exposed occurrences (all)	0 / 14 (0.00%) 0	1 / 5 (20.00%) 1	
Pain in extremity subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	
Infections and infestations Respiratory Tract Infection subjects affected / exposed occurrences (all)	1 / 14 (7.14%) 1	0 / 5 (0.00%) 0	

Sepsis			
subjects affected / exposed	1 / 14 (7.14%)	0 / 5 (0.00%)	
occurrences (all)	1	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 June 2020	The original protocol was updated to include important safety guidelines for RESP301 administration for the first 10 participants (i.e., up to the first IDMC safety review). It was also updated to align with the IB Version 2.0, dated 27 May 2020.
10 June 2020	The protocol was updated to clarify that staggered dosing was required for all participants treated before completion of the first IDMC review, and to clarify exclusionary criteria and monitoring of mHb. Information was added to ensure that Investigators are aware of the potential risk of interaction between NO and other NO donor agents.
16 September 2020	The amendment included changes to (a) expand the inclusion criteria to allow enrolment also of patients in hospital with COVID-19 but not yet requiring supplemental oxygen, (b) to allow a minor temporary temperature excursion in the storage conditions of RESP301 to facilitate transport from the manufacturer to the clinical site or from the clinical site pharmacy to the bedside, and (c) to raise the exclusionary level for mHb to >2%.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
