Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 May 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 June 2021
Global end of trial reached?	Yes
Global end of trial date	06 October 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to assess the effect of rivaroxaban compared with standard of care (SOC) with the use of prophylactic low molecular weight heparin (LMWH) or unfractionated heparin (UFH) on D-dimer as a clinical marker for the clinical outcome at day 7 post randomization adjusted for baseline measurement in patients with moderate to severe COVID-19.

The co-primary objective is to evaluate the impact of rivaroxaban compared with standard of care (SOC) with the use of prophylactic low molecular weight heparin (LMWH) or unfractionated heparin (UFH) on a seven-category ordinal scale recommended by the WHO as a measure of clinical benefit at day 7 post randomization adjusted for baseline score in patients with moderate to severe COVID-19.

Protection of trial subjects:

Non applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 November 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 111
Worldwide total number of subjects	111
EEA total number of subjects	111

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	63

From 65 to 84 years	42
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 22 study centers in Germany.

Adults with moderate to severe COVID-19 and a high thrombotic risk were included in the study. Patients with an indication for a chronic anticoagulation or with a high bleeding risk were excluded from the study.

Pre-assignment

Screening details:

A total of 117 patients were screened, 6 were screening failure, so that at the end 111 patients were enrolled and randomized.

Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Rivaroxaban group

Arm description:

Subjects received rivaroxaban 20 mg (15 mg for subjects with an eGFR ≥ 30 mL/min/1.73m² and < 50 mL/min/1.73m²) once daily (OD) for at least 7 days or until hospital discharge, whichever occurred later. After this full-anticoagulation phase, the patients received rivaroxaban 10mg OD for 28 days.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	366789-02-8
Other name	Xarelto
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Treatment with Rivaroxaban 20 mg (15 mg for subjects with an eGFR ≥ 30 mL/min/1.73m² and < 50 mL/min/1.73m²) once daily (OD) for at least 7 days was given. In case of hospitalization for more than 7 days, the therapeutic treatment with rivaroxaban was continued for the duration of the hospital stay until discharge.

After at least 7 days of therapeutic treatment with rivaroxaban or after hospital discharge, the daily dosage was reduced to 10 mg OD for 28 days.

Arm title	Standard of care
------------------	------------------

Arm description:

The patients in this group were treated with prophylactic low molecular weight heparin (LMWH) or unfractionated heparin (UFH) until day 7 post randomization or until discharge, whichever occurred later

Arm type	control group
Investigational medicinal product name	Unfractionated heparin of low molecular weight heparin
Investigational medicinal product code	SUB12369MIG
Other name	TINZAPARIN SODIUM
Pharmaceutical forms	Anticoagulant and preservative solution for blood
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

The patients in this group were treated with prophylactic low molecular weight heparin (LMWH) or unfractionated heparin (UFH) until day 7 post randomization or until discharge, whichever occurred later.

Number of subjects in period 1	Rivaroxaban group	Standard of care
Started	55	56
Completed	48	48
Not completed	7	8
Adverse event, serious fatal	1	1
Consent withdrawn by subject	4	3
Adverse event, non-fatal	-	1
loss of contact	-	2
Subsequent occurrence excl. criteria	1	-
Lost to follow-up	1	-
transfer to another hospital	-	1

Primary: D-dimer at day 7 post randomization

End point title	D-dimer at day 7 post randomization
End point description: The primary objective is to assess the effect of rivaroxaban compared with standard of care (SOC) with the use of prophylactic low molecular weight heparin (LMWH) or unfractionated heparin (UFH) on D-dimer as a clinical marker for the clinical outcome at day 7 post randomization adjusted for baseline measurement in patients with moderate to severe COVID-19. The logarithmic D-dimer measurements (using the natural logarithm) was analyzed by an analysis of covariance (ANCOVA). The model included treatment group and stratification variables of the randomization as factors and the logarithmic baseline D-dimer measurement as covariate. Least squares means for D-dimer at day 7 in the two treatment groups is presented with 95% confidence intervals as well as the difference between the treatment groups at day 7 with 95% confidence interval and p-value testing the null hypothesis of no treatment difference, i.e. a mean difference (on the logarithmic scale) of 0.	
End point type	Primary
End point timeframe: Measurement of D-dimer at day 7 post randomization	

End point values	Rivaroxaban group	Standard of care		
Subject group type	Reporting group	Reporting group

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 August 2021	<p>The initial planned sample size based on statistical calculations was 400 patients. Due to decreasing COVID incidence rates, it became very likely not to be able to recruit the planned patient number within a reasonable time frame to contribute with the results to the treatment of patients suffering from COVID.</p> <p>The main changes were:</p> <ul style="list-style-type: none">- Primary efficacy endpoints and its corresponding statistical analysis- Secondary efficacy endpoints and its corresponding statistical analysis- Sample size determination

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
11 June 2021	The study was interrupted because of the decreasing numbers of covid patients, to decide to weather continue the trial or to stop it and analyze the available data that was collected until the moment of the interruption.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The biggest limitation of the study was the small number of patients included. Due to the low recruitment, it wasn't possible to test the initial primary hypothesis with the sufficient statistical power. For this reason, the outcomes in the protocol

Notes:
