

## Clinical trial results:

**A randomized, double-blind, placebo-controlled, adaptive-design study to assess the safety and efficacy of daily 200 mg fluvoxamine as add-on therapy to standard of care in moderate severity COVID-19 patients**

### Summary

EudraCT number	2020-002299-11
Trial protocol	HU
Global end of trial date	31 May 2022

### Results information

Result version number	v1 (current)
This version publication date	01 February 2023
First version publication date	01 February 2023
Summary attachment (see zip file)	SD-COVID19-01 - Final Report 2022-10-26 synopsis (SD-COVID19-01 - Final Report 2022-10-26 synopsis.pdf)

### Trial information

#### Trial identification

Sponsor protocol code	SD-COVID19-01
-----------------------	---------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04718480
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 May 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 May 2022
Global end of trial reached?	Yes
Global end of trial date	31 May 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess efficacy of fluvoxamine administration in moderate SARS-CoV-2 infected patients on short term healing.

Protection of trial subjects:

Patient Information Sheets and Informed Consent Forms were used to confirm the subjects' informed consent to participate in the trial. After the subject has read the Information Sheet and received verbal information about the trial, participation in the study was confirmed by signing and dating the Informed Consent Form.

The Investigator (according to applicable regulatory requirements), or a medically qualified person designated by the Investigator, and under the Investigator's responsibility, informed fully the subject on all pertinent aspects of the clinical study, including the written information giving approval/favorable opinion by the Regulatory Authority / Ethics Committee, as appropriate. All participants were informed to the fullest extent possible about the study, in language and terms they were able to understand. Prior to a subject's participation in the clinical study, the written Informed Consent Form and any other local applicable documents in accordance with local laws and regulations, have been signed, the name completed and personally dated by the subject, and by the person who conducted the informed consent discussion. A copy of the signed and dated written Informed Consent Form and Information Sheet were provided to the subject.

The Informed Consent Form used by the Investigator for obtaining the subject's informed consent were reviewed and approved by the Sponsor prior to submission to the Regulatory Authority / Ethics Committee, as appropriate, for approval / favorable opinion.

Background therapy:

All patients received a base therapy, as per standard of care – the actual proposed therapy of moderate and severe SARS-CoV-2 infected patients according to the „Magyar Koronavírus Kézikönyv” (Hungarian Coronavirus Handbook).

Evidence for comparator:

NA Placebo controlled study.

Actual start date of recruitment	27 November 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Hungary: 66
Worldwide total number of subjects	66
EEA total number of subjects	66

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	50
From 65 to 84 years	16
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Hospitalized patients with confirmed SARS-CoV-2 infection by polymerase chain reaction (PCR) or known contact of confirmed case with syndrome consistent with coronavirus disease (COVID-19) with PCR pending were enrolled to the study. (Moderate or severe cases).

The recruitment took place in Hungary between November 2020 and January 2022

### Pre-assignment

Screening details:

Screening period was up to 48 hours. Preferably, after diagnosing the COVID-19, treatment was to be started on the following day (D1).

A total of 90 patients were screened at 6 Hungarian study centers.

### Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Double-blind, placebo controlled study.

Placebo tablets matched active ingredients in looks and packaging.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Active

Arm description:

Patients received fluvoxamin treatment in addition to standard-of-care.

Arm type	Experimental
Investigational medicinal product name	Fluvoxamine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

The following dosing schedule will be used during the study to ensure careful dose escalation, 54 days treatment at the proposed 200 mg dose-level and tapering-off.

- Day 1-2: 50 mg bedtime (2 days on this dose level)
- Day 3-4: 100 mg bedtime (2 days on this dose level)
- Day 5-6: 150 mg bedtime (2 days on this dose level)
- Day 7-60: 2 x 100 mg (BID: morning and bedtime) (54 days on this dose level)
- Day 61-65: 150 mg bedtime (5 days on this dose level)
- Day 66-70: 100 mg bedtime (5 days on this dose level)
- Day 71-74: 50 mg bedtime (4 days on this dose level)

Whenever stop of treatment is required earlier the above tapering-off schedule should be followed if possible to reduce withdrawal symptoms. If this is not possible the patient should be closely monitored during the withdrawal period.

<b>Arm title</b>	Placebo
Arm description:	
The patients received placebo treatment matching the active arm.	
Arm type	Placebo

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

- Day 1-2: 50 mg bedtime (2 days on this dose level)
- Day 3-4: 100 mg bedtime (2 days on this dose level)
- Day 5-6: 150 mg bedtime (2 days on this dose level)
- Day 7-60: 2 x 100 mg (BID: morning and bedtime) (54 days on this dose level)
- Day 61-65: 150 mg bedtime (5 days on this dose level)
- Day 66-70: 100 mg bedtime (5 days on this dose level)
- Day 71-74: 50 mg bedtime (4 days on this dose level)

<b>Number of subjects in period 1</b>	Active	Placebo
Started	34	32
Completed	23	20
Not completed	11	12
Adverse event, serious fatal	-	1
Consent withdrawn by subject	9	5
Adverse event, non-fatal	1	3
Lost to follow-up	1	3

## Baseline characteristics

### Reporting groups

Reporting group title	Active
Reporting group description:	
Patients received fluvoxamin treatment in addition to standard-of-care.	
Reporting group title	Placebo
Reporting group description:	
The patients received placebo treatment matching the active arm.	

Reporting group values	Active	Placebo	Total
Number of subjects	34	32	66
Age categorical			
Units: Subjects			
Adults (18-64 years)	28	22	50
From 65-84 years	6	10	16
Age continuous			
Baseline age data			
Units: years			
arithmetic mean	51.3	55	
standard deviation	± 14.3	± 13.1	-
Gender categorical			
Units: Subjects			
Female	10	14	24
Male	24	18	42
COVID19 High rik			
Patients will be stratified based on one criteria: belonging to the group at high risk for COVID-19 (comorbidities of hypertension, diabetes mellitus, chronic cardiovascular or chronic respiratory diseases) or not.			
Units: Subjects			
High-risk	19	16	35
Not high-risk	15	16	31
Somker			
Strong smokers were excluded from the study at screening			
Units: Subjects			
Smoker	3	2	5
Non-smoker	31	30	61

## End points

### End points reporting groups

Reporting group title	Active
Reporting group description: Patients received fluvoxamin treatment in addition to standard-of-care.	
Reporting group title	Placebo
Reporting group description: The patients received placebo treatment matching the active arm.	

### Primary: Time to achieve a score of 0-2 WHO

End point title	Time to achieve a score of 0-2 WHO
End point description: Time to achieve a score of 0-2 (ambulatory state) on the WHO Ordinal Scale for Clinical Improvement This is a secondary endpoint, there were no primary endpoints specified for the trial, endpoint type was added to allow reporting.	
End point type	Primary
End point timeframe: D1-D75	

End point values	Active	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	30	27		
Units: days				
arithmetic mean (inter-quartile range (Q1-Q3))	10.5 (6 to 13)	13.6 (8 to 20)		

### Statistical analyses

Statistical analysis title	Logrank
Statistical analysis description: Time to recovery (days) was assessed using Kaplan-Meyer methods. Median time to recovery in treatment groups were compared by log-rank and Wilcoxon tests. Cox regression model was applied to investigate possible significant factors influencing the time to recovery. Belonging to the high-risk group was included in the Cox regression model as independent factors. The model indicated no significant factors for the endpoint.	
Comparison groups	Active v Placebo
Number of subjects included in analysis	57
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.032
Method	Logrank

Confidence interval	
sides	2-sided
Variability estimate	Standard deviation
Dispersion value	0.032

<b>Statistical analysis title</b>	Wilcoxon
-----------------------------------	----------

Statistical analysis description:

Time to recovery (days) was assessed using Kaplan-Meier methods. Median time to recovery in treatment groups were compared by log-rank and Wilcoxon tests. Cox regression model was applied to investigate possible significant factors influencing the time to recovery. Belonging to the high-risk group was included in the Cox regression model as independent factors. The model indicated no significant factors for the endpoint.

Comparison groups	Active v Placebo
Number of subjects included in analysis	57
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.0352
Method	Wilcoxon (Mann-Whitney)
Confidence interval	
sides	2-sided
Variability estimate	Standard deviation
Dispersion value	0.0352

## Secondary: Time to clinical improvement

End point title	Time to clinical improvement
-----------------	------------------------------

End point description:

Time to clinical recovery after treatment, defined as days from randomization (Day 1) to ANY THREE items of the following four:

- 1.) resolution from fever: oral or tympanic (core body) temperature  $\leq 37.5$  °C, axillary, forehead or wrist (surface body) temperature  $\leq 37.0$  °C for at least 48 hours without antipyretics
- 2.) return of respiratory rate to normal ( $\leq 20$  / min)
- 3.) normalization of SpO2 (  $\geq 95\%$  without oxygen support )
- 4.) cough remission (any reduction in cough-burden Visual Analogue Scale, compared to Day 1 baseline)

End point type	Secondary
----------------	-----------

End point timeframe:

D1-D75

End point values	Active	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	32	30		
Units: days				
arithmetic mean (standard deviation)	2.1 ( $\pm$ 1.24)	2.3 ( $\pm$ 3.6)		

## Statistical analyses

<b>Statistical analysis title</b>	Kaplan-Meyer method ITT
Statistical analysis description: Time to recovery (days) was assessed using Kaplan-Meyer methods. Median time to recovery in treatment groups were compared by log-rank and Wilcoxon tests. Time to recovery was also characterized using descriptive statistical methods including the calculation of the 95% confidence intervals.	
Comparison groups	Active v Placebo
Number of subjects included in analysis	62
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.8845
Method	Logrank

<b>Statistical analysis title</b>	Copy of Kaplan-Meyer method
Statistical analysis description: Time to recovery (days) was assessed using Kaplan-Meyer methods. Median time to recovery in treatment groups were compared by log-rank and Wilcoxon tests. Time to recovery was also characterized using descriptive statistical methods including the calculation of the 95% confidence intervals.	
Comparison groups	Active v Placebo
Number of subjects included in analysis	62
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.3577
Method	Wilcoxon (Mann-Whitney)

## Secondary: Time course of cough burden

End point title	Time course of cough burden
End point description: Assessed by a cough burden visual analogue scale (VAS) completed by the patient during study visits.	
End point type	Secondary
End point timeframe: D1-D75	

End point values	Active	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	17	17		
Units: VAS value				
arithmetic mean (inter-quartile range (Q1-Q3))	0.2 (0 to 0.2)	0.9 (0 to 1.3)		

## Statistical analyses

Statistical analysis title	Mixed linear models
----------------------------	---------------------

Statistical analysis description:

Variable was assessed using mixed linear models including the treatment, time, time\*treatment interaction, belonging to the high-risk group as independent factors and baseline values as a covariate. The model was also re-fitted without factors that turned to be non-significant.

Comparison groups	Active v Placebo
Number of subjects included in analysis	34
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	= 0.713
Method	Mixed models analysis

Notes:

[1] - VAS values decreased during the study in both treatment groups. It must be noted that baseline VAS values were higher in the Placebo group. The mixed model indicated significant difference between treatment groups even with the baseline VAS value included in the model.

## Secondary: Time to negative COVID-19 nucleic acid results

End point title	Time to negative COVID-19 nucleic acid results
-----------------	--

End point description:

PCR testing was performed at visit days and according to standard-of-care and not due to study considerations, therefore time to PCR negativity can be biased. In a few cases PCR negativity was never confirmed as it was no longer clinically indicated after the clinical signs have resolved.

End point type	Secondary
----------------	-----------

End point timeframe:

D1-D75

End point values	Active	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	17	20		
Units: days				
arithmetic mean (standard deviation)	24.6 (± 23.27)	15.2 (± 15.89)		

## Statistical analyses

Statistical analysis title	Logrank
----------------------------	---------

Statistical analysis description:

The endpoint was assessed using Kaplan-Meier methods. Median time to negative COVID-19 nucleic acid

acid were compared by log-rank and Wilcoxon tests. Endpoint was also characterized using descriptive statistical methods including the calculation of the 95% confidence intervals. Cox regression model was applied to investigate possible significant factors influencing the time to recovery. Belonging to the high-risk group was included in the Cox regression model as independent factor.

Comparison groups	Active v Placebo
Number of subjects included in analysis	37
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.1641
Method	Logrank

<b>Statistical analysis title</b>	Wilcoxon
-----------------------------------	----------

Statistical analysis description:

The endpoint was assessed using Kaplan-Meier methods. Median time to negative COVID-19 nucleid acid were compared by log-rank and Wilcoxon tests. Endpoint was also characterized using descriptive statistical methods including the calculation of the 95% confidence intervals. Cox regression model was applied to investigate possible significant factors influencing the time to recovery. Belonging to the high-risk group was included in the Cox regression model as independent factor.

Comparison groups	Active v Placebo
Number of subjects included in analysis	37
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.0946
Method	Wilcoxon (Mann-Whitney)

## Secondary: Rate of patients with native chest CT recovery

End point title	Rate of patients with native chest CT recovery
End point description:	
Rate of patients with native chest CT recovery from the acute stage of COVID-19 by Day 45 visit	
End point type	Secondary
End point timeframe:	
D45	

End point values	Active	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	24	21		
Units: patients				
native chest CT recovery	14	12		
No native chest CT recovery	10	9		

## Statistical analyses

<b>Statistical analysis title</b>	Fisher's exact test
Statistical analysis description: Rates were compared by two-sample chi-square tests. Number of cases and ratios by treatment groups were also calculated together with the 95% Clopper-Pearson confidence intervals.	
Comparison groups	Active v Placebo
Number of subjects included in analysis	45
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 1
Method	Fisher exact

## Secondary: Rate of patients requiring oxygen supplementation

End point title	Rate of patients requiring oxygen supplementation
End point description: Rate of patients requiring oxygen supplementation. Those patients who required oxygen supplementation during the study; required oxygen supplementation at baseline already.	
End point type	Secondary
End point timeframe: D1-D75	

<b>End point values</b>	Active	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	34	32		
Units: patients				
Patient requiring O2 supplementation	30	30		
Patient not requiring O2 supplementation	4	2		

## Statistical analyses

<b>Statistical analysis title</b>	Fisher's exact test
Statistical analysis description: Rates were compared by two-sample chi-square tests. Number of cases and ratios by treatment groups were also calculated together with the 95% Clopper-Pearson confidence intervals.	
Comparison groups	Active v Placebo
Number of subjects included in analysis	66
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.6733
Method	Fisher exact

**Secondary: Long-term efficacy of fluvoxamine in preventing pulmonary pathology (fibrosis)**

End point title	Long-term efficacy of fluvoxamine in preventing pulmonary pathology (fibrosis)
End point description: Long-term efficacy of fluvoxamine in preventing pulmonary pathology (fibrosis), as monitored by native chest CT - Presence / quantification (e.g. percentage) / absence of: 1.) Reticular abnormality, 2.) Traction bronchiectasis and bronchiolectasias, 3.) Honeycombing.	
End point type	Secondary
End point timeframe: 6 Months	

End point values	Active	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	25	20		
Units: Patients				
Pulmonary fibrosis present	6	6		
No pulmonary fibrosis detected	19	14		

**Statistical analyses**

Statistical analysis title	LTP generalized linear model
Statistical analysis description: Rate was analysed using generalized linear models including treatment, belonging to the high risk group as fix factors. Only presence of pulmonary fibrosis was analysed this way as for the other parameters the model did not converge.	
Comparison groups	Active v Placebo
Number of subjects included in analysis	45
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.3617
Method	Generalised linear model

**Secondary: Rate of patients treated with antiviral and immunmodulant therapy or reconvalescent plasma against COVID-19 disease**

End point title	Rate of patients treated with antiviral and immunmodulant therapy or reconvalescent plasma against COVID-19 disease
End point description: Rate of patients treated with antiviral and immunmodulant therapy or reconvalescent plasma against COVID-19 disease	
End point type	Secondary

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 January 2021	<ul style="list-style-type: none"><li>◦ Amended inclusion-exclusion criteria: clarification regarding mild-moderate-severe COVID disease state as per Hungarian Coronavirus Handbook</li><li>◦ Malignancy exclusion criterion limited to the past 5 years</li><li>◦ Clarification of oxygen saturation, smoking, timing of first dose, start of AE collection period, CT imaging</li><li>◦ Age range: 18-80 years</li><li>◦ Implementation of flexible visit windows at Day 7, 14 and 21 visits</li><li>◦ Rationalization of temperature measurements</li><li>◦ Reduction of mandatory hospitalization period according to current standard of care</li><li>◦ Visit details for patients quarantined at home</li><li>◦ Determination of patient compliance</li><li>◦ Instruction of concurrent administration of fluvoxamin with benzodiazepins</li></ul>
02 November 2021	<ul style="list-style-type: none"><li>• Protocol v 4.0 implemented adaptive changes to the study based on the interim analysis, and also streamlined study flow to be in line with standard COVID care, based on study sites feedback</li><li>◦ Amended inclusion criteria to enrol severe but not critical state patients and to exclude patients who underwent &gt;10 days of COVID care previously</li><li>◦ Primary endpoint was reclassified as efficacy endpoint (SEC 00)</li><li>◦ New secondary endpoint of achievement of 1 or 0 score using WHO ordinal scale</li><li>◦ Rationalization of biomarkers: extension of biomarker follow-up to Day 30 and deleting IL-8 from the determinations</li><li>◦ Setting target patient number to 100</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
