

## Clinical trial results:

### KAND567 Versus Placebo in Subjects Hospitalized with COVID-19. A Phase II, Randomized, 2-Arm Parallel-Group, Double-blind Study to Evaluate Efficacy, Safety, Tolerability, and Pharmacokinetics.

#### Summary

EudraCT number	2020-002322-85
Trial protocol	SE DK
Global end of trial date	07 August 2021

#### Results information

Result version number	v1 (current)
This version publication date	02 July 2022
First version publication date	02 July 2022

#### Trial information

##### Trial identification

Sponsor protocol code	KAN0006
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

##### Sponsors

Sponsor organisation name	Kancera AB
Sponsor organisation address	Karolinska Institutet Science Park, Nanna Svartz Väg 4, Solna, Sweden, SE-171 65
Public contact	Niclas Brynne, PhD, Kancera AB, +46 (0)8 50 12 60 80, niclas.brynne@kancera.com
Scientific contact	Niclas Brynne, PhD, Kancera AB, +46 (0)8 50 12 60 80, niclas.brynne@kancera.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 August 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 August 2021
Global end of trial reached?	Yes
Global end of trial date	07 August 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to assess the impact of oral administration of KAND567 versus placebo, in COVID-19 subjects admitted to the hospital for care of COVID-19 infection with respect to rates of adverse events (AEs) and serious adverse events (SAEs).

Protection of trial subjects:

The external Safety Review Committee (SRC) consisted of 3 members representing appropriate clinical expertise and having extensive experience in clinical study design and conduct. No formal statistical interim analysis was to be performed, but the SRC was to evaluate all available efficacy and safety data after 10 and 20 patients had completed the 7 day treatment period. Based on this evaluation, the SRC was to give a recommendation either to continue as planned, modify the study design, or stop the study prematurely. Their recommendation was to be discussed and agreed with the Sponsor's CMO, who was responsible for making the ultimate decision.

SRC meetings consisted of an open session, based on the fully blinded dataset, to discuss general study issues. This was followed by the closed portion of the meeting, for SRC members only, to discuss the unblinded dataset (produced by an independent external programmer).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 October 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 34
Country: Number of subjects enrolled	Denmark: 1
Worldwide total number of subjects	35
EEA total number of subjects	35

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	32
From 65 to 84 years	3
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

COVID-19 patients admitted to the hospital received Best Supportive Care and could be screened for inclusion in the study. If all the criteria for study participation were fulfilled and informed consent was signed, the subject was enrolled and randomized to one of the two treatment arms.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

Blinding implementation details:

The placebo was identical in appearance to KAND567, and the site staff, sponsor and CRO were blinded throughout the study. The staff at Tamro (responsible for labeling) and the staff at Q&Q Labs AB (responsible for bioanalysis) were unblinded. The independent Safety Review Committee (SRC) was also unblinded during the closed portion of their meetings, which was supported by the external, unblinded programmer who produced the dataset.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	KAND567 (250 mg BID)

Arm description:

KAND567 (250 mg) was orally administered every 12 hours (at 8am and 8pm  $\pm$  1 hour) with an initial loading dose of either 250 mg or 500 mg KAND567, depending on the time of inclusion (see below).

The initial loading dose of KAND567 was given as follows:

- 500 mg was given to patients when included in the study 12 to 6 hours prior to a scheduled dose (at 8 am or 8 pm  $\pm$  1 hour)
- 250 mg was given to patients when included in the study less than 6 hours prior to a scheduled dose (at 8 am or 8 pm  $\pm$  1 hour)

Arm type	Experimental
Investigational medicinal product name	KAND567
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

KAND567 (250 mg) was orally administered every 12 hours (at 8am and 8pm  $\pm$  1 hour) with an initial loading dose of either 250 mg or 500 mg KAND567, depending on the time of inclusion (see below).

The initial loading dose of KAND567 was given as follows:

- 500 mg was given to patients when included in the study 12 to 6 hours prior to a scheduled dose (at 8 am or 8 pm  $\pm$  1 hour)
- 250 mg was given to patients when included in the study less than 6 hours prior to a scheduled dose (at 8 am or 8 pm  $\pm$  1 hour)

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Placebo was orally administered every 12 hours (at 8am and 8pm  $\pm$  1 hour)

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo was orally administered every 12 hours (at 8am and 8pm  $\pm$  1 hour)

<b>Number of subjects in period 1</b>	KAND567 (250 mg BID)	Placebo
Started	16	19
Completed	12	16
Not completed	4	3
Adverse event, serious fatal	1	-
Consent withdrawn by subject	3	3

## Baseline characteristics

### Reporting groups

Reporting group title	KAND567 (250 mg BID)
Reporting group description: KAND567 (250 mg) was orally administered every 12 hours (at 8am and 8pm $\pm$ 1 hour) with an initial loading dose of either 250 mg or 500 mg KAND567, depending on the time of inclusion (see below). The initial loading dose of KAND567 was given as follows: - 500 mg was given to patients when included in the study 12 to 6 hours prior to a scheduled dose (at 8 am or 8 pm $\pm$ 1 hour) - 250 mg was given to patients when included in the study less than 6 hours prior to a scheduled dose (at 8 am or 8 pm $\pm$ 1 hour)	
Reporting group title	Placebo
Reporting group description: Placebo was orally administered every 12 hours (at 8am and 8pm $\pm$ 1 hour)	

Reporting group values	KAND567 (250 mg BID)	Placebo	Total
Number of subjects	16	19	35
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	14	18	32
From 65-84 years	2	1	3
85 years and over	0	0	0
Gender categorical Units: Subjects			
Female	5	7	12
Male	11	12	23

### Subject analysis sets

Subject analysis set title	KAND567 (Safety Analysis Set)
Subject analysis set type	Safety analysis
Subject analysis set description: Randomized subjects who received any dose of KAND567 and for whom any post-dose data were available. Subjects were to be analyzed according to the treatment they actually received.	
Subject analysis set title	Placebo (Safety Analysis Set)
Subject analysis set type	Safety analysis
Subject analysis set description: Randomized subjects who received any dose of placebo and for whom any post-dose data were available. Subjects were to be analyzed according to the treatment they actually received.	

<b>Reporting group values</b>	KAND567 (Safety Analysis Set)	Placebo (Safety Analysis Set)	
Number of subjects	15	18	
Age categorical Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	13	18	
From 65-84 years	2	0	
85 years and over	0	0

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 December 2020	Sweden: Changes to inclusion/exclusion criteria, clarifications made regarding restricted medications, secondary endpoints, sampling, and treatment discontinuation, and dosing diary implemented.
04 March 2021	Denmark: Change to inclusion/exclusion criteria and the sponsor's medical representative, clarifications made regarding timing of assessments, and dosing diary implemented.
31 May 2021	Sweden: Changes to inclusion/exclusion criteria and sponsor's medical representative, and clarifications made regarding timing of assessments.
29 June 2021	Sweden: Change in the primary objective and endpoint.
19 July 2021	Denmark: Change in the primary objective and endpoint.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
