Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 August 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 September 2024
Global end of trial reached?	Yes
Global end of trial date	23 September 2024
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

We aim to investigate the feasibility of daily tadalafil for three months compared to placebo in patients with cerebral small vessel disease and stroke/TIA.

Protection of trial subjects:

Safety and adverse events were monitored throughout the trial period. Participants had a phone number they could call throughout the day to contact study personnel in case of questions and adverse events.

Background therapy:

All participants received standard care medication.

Evidence for comparator:

Daily dosing with 20 mg tadalafil was tested against daily placebo for three months. Tadalafil is a known vasoactive substance which we wanted to test in a population with cerebral small vessel disease. Impaired vascular reactivity is a characteristic feature of cerebral small vessel disease.

Actual start date of recruitment	14 June 2022
Long term follow-up planned	Yes
Long term follow-up rationale	Scientific research
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 76
Worldwide total number of subjects	76
EEA total number of subjects	76

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	29
From 65 to 84 years	44
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Recruitment began on June 14, 2022, and concluded on June 19, 2024.

All participants were recruited from the Capital Region of Denmark.

Pre-assignment

Screening details:

We prescreened patient records of previously admitted patients from the stroke department of four hospitals in the Capital Region of Denmark. Eligible patients were asked for interest and invited to an information and inclusion visit.

We prescreened 13 532 patients, of which 255 were asked for interest. We included 76 patients in total.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

This trial was blinded and placebo-controlled, with a 1:1 allocation between oral daily tadalafil 20 mg or placebo. Randomization was conducted by the Capital Region Pharmacy in Denmark. Tadalafil and placebo were encapsulated in identical opaque capsules and packaged in identical containers, each labeled with a unique identification number. Upon inclusion, participants were assigned a randomization number to ensure blinding.

Arms

Are arms mutually exclusive?	Yes
Arm title	Tadalafil

Arm description:

Daily tadalafil for 3 months.

Arm type	Experimental
Investigational medicinal product name	Tadalafil Stada
Investigational medicinal product code	G04BE08
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Tadalafil Stada, 20 mg, administered once daily in the morning, for three months.

Arm title	Placebo
------------------	---------

Arm description:

Daily placebo for 3 months.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo, administered once daily in the morning, for three months.

Arm title	Excluded before treatment initiation
------------------	--------------------------------------

Arm description:

These participants were all in the placebo group, but they were excluded before treatment initiation due to unexpected MRI contraindications.

Arm type	Placebo, excluded
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo, administered once daily in the morning, for three months.

Number of subjects in period 1	Tadalafil	Placebo	Excluded before treatment initiation
Started	38	33	5
Completed	33	33	0
Not completed	5	0	5
Adverse event, non-fatal	5	-	-
Excluded due to MRI contraindications.	-	-	5

Units: Scale from 0-3				
Baseline: Fazekas 0	1	2		
Baseline: Fazekas 1	14	17		
Baseline: Fazekas 2	10	8		
Baseline: Fazekas 3	13	6		

Follow-up: Fazekas 0	1	1		
Follow-up: Fazekas 1	10	18		
Follow-up: Fazekas 2	13	7		
Follow-up: Fazekas 3	8	7		
Delta -1	2	0		
Delta 0	28	31		
Delta 1	2	2		

Notes:

[35] - 38 at baseline and 32 at follow-up.

Statistical analyses

No statistical analyses for this end point

Secondary: MRI: EPVS basal ganglia and centrum semiovale

End point title	MRI: EPVS basal ganglia and centrum semiovale ^[36]
-----------------	---

End point description:

EPVS basal ganglia and centrum semiovale and delta value (follow-up - baseline).

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline and follow-up visit (3 months).

Notes:

[36] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There is no data for the Arm: Excluded before treatment initiation. These participants were excluded before any intervention and assessment.

End point values	Tadalafil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	38 ^[37]	33		
Units: Scale from 0-3				
Baseline: No EPVS	1	2		
Baseline: 1-10 EPVS (mild)	20	24		
Baseline: 11-20 EPVS (moderate)	11	6		
Baseline: 21- EPVS (frequent)	6	1		
Follow-up: No EPVS	2	2		
Follow-up: 1-10 EPVS (mild)	19	24		
Follow-up: 11-20 EPVS (moderate)	6	5		
Follow-up: 21-40 EPVS (frequent)	5	2		
Delta -1	6	0		
Delta 0	25	32		
Delta 1	1	1		

Notes:

[37] - 38 at baseline and 32 at follow-up.

Statistical analyses

No statistical analyses for this end point

Secondary: MRI: EPVS midbrain

End point title	MRI: EPVS midbrain ^[38]
End point description: Visible EPVS in the midbrain and delta value (follow-up - baseline).	
End point type	Secondary
End point timeframe: Baseline and follow-up visit (3 months).	

Notes:

[38] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There is no data for the Arm: Excluded before treatment initiation. These participants were excluded before any intervention and assessment.

End point values	Tadalafil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	38 ^[39]	33		
Units: Visible or not visible				
Baseline: No EPVS visible	20	25		
Baseline: EPVS visible	18	8		
Follow-up: No EPVS visible	19	24		
Follow-up: EPVS visible	13	9		
Delta -1	4	1		
Delta 0	26	30		
Delta 1	2	2		

Notes:

[39] - 38 at baseline and 32 at follow-up.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From inclusion in the trial to the safety follow-up visit 2 weeks after treatment cessation.

Adverse event reporting additional description:

Adverse events were registered on a specific adverse events questionnaire. This questionnaire was reviewed during all physical visits and orally during all telephone visits.

Assessment type	Systematic

Nausea			
subjects affected / exposed	1 / 38 (2.63%)	0 / 33 (0.00%)	
occurrences (all)	1	0	
Respiratory, thoracic and mediastinal disorders			
Nasal congestion			
subjects affected / exposed	5 / 38 (13.16%)	4 / 33 (12.12%)	
occurrences (all)	8	4	
Dyspnoea			
subjects affected / exposed	1 / 38 (2.63%)	0 / 33 (0.00%)	
occurrences (all)	1	0	
Skin and subcutaneous tissue disorders			
Flushing	Additional description: Facial flushing.		
subjects affected / exposed	6 / 38 (15.79%)	3 / 33 (9.09%)	
occurrences (all)	36	3	
Erythema	Additional description: Local skin reddening and itching.		
subjects affected / exposed	2 / 38 (5.26%)	0 / 33 (0.00%)	
occurrences (all)	3	0	
Musculoskeletal and connective tissue disorders			
Pain	Additional description: Muscle pain.		
subjects affected / exposed	13 / 38 (34.21%)	2 / 33 (6.06%)	
occurrences (all)	28	13	
Back pain			
subjects affected / exposed	8 / 38 (21.05%)	1 / 33 (3.03%)	
occurrences (all)	13	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Recruitment stopped before reaching the aimed 100 participants due to limited time in the funded trial period. This resulted in a smaller sample size than planned.
