

## Clinical trial results:

**A Phase IIIb, Randomized, Multicenter, Active-controlled, Parallel-group, Non-inferiority, Open-label Study Evaluating the Efficacy, Safety, and Tolerability of Switching to Long-acting Cabotegravir Plus Long-acting Rilpivirine administered every two months from a Bictegravir/emtricitabine/tenofovir alafenamide Single Tablet Regimen in HIV-1 Infected Adults who are Virologically Suppressed**

### Summary

EudraCT number	2020-002623-11
Trial protocol	FR NL GB IE DE AT IT BE
Global end of trial date	17 April 2023

### Results information

Result version number	v4 (current)
This version publication date	12 July 2024
First version publication date	28 July 2023
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li></ul> Data set corrected based on latest feedback.

### Trial information

#### Trial identification

Sponsor protocol code	213500
-----------------------	--------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04542070
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 May 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 April 2023
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate the non-inferior antiviral activity of CAB LA + RPV LA every two months compared to a BIK single tablet regimen administered once daily over 12 months in suppressed HIV-1 infected antiretroviral therapy (ART)-experienced participants.

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 November 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 15
Country: Number of subjects enrolled	Canada: 52
Country: Number of subjects enrolled	France: 33
Country: Number of subjects enrolled	Germany: 39
Country: Number of subjects enrolled	Ireland: 5
Country: Number of subjects enrolled	Japan: 20
Country: Number of subjects enrolled	Australia: 22
Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	Spain: 78
Country: Number of subjects enrolled	Switzerland: 16
Country: Number of subjects enrolled	United Kingdom: 17
Country: Number of subjects enrolled	United States: 286
Country: Number of subjects enrolled	Austria: 9
Country: Number of subjects enrolled	Italy: 86
Worldwide total number of subjects	687
EEA total number of subjects	274

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	676
From 65 to 84 years	11
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study consists in 2 periods: Maintenance Period and Extension Period. Any participants who successfully completed 12 months of CAB+RPV treatment in the Maintenance Phase had the option to enter the Extension Phase and continued to have access to CAB + RPV.

### Pre-assignment

Screening details:

687 participants were enrolled in this study, out of which 681 were included in intent-to-treat exposed population (ITT-E). The Modified ITT-E (excluded participants due to eligibility criteria violations and GCP non-compliance) was used to primarily present the participant flow, baseline characteristics and efficacy analysis. Safety analyses were

### Period 1

Period 1 title	Maintenance Period (Day 1 - Month 12)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Oral lead-in phase (OLI)

Arm description:

Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. At the month 1 visit, the last dose of oral CAB + RPV was given, followed by the first 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM), and second injection of CAB LA 600 mg + RPV LA 900 mg at month 2, and then subsequent injections once every 2 months (Q2M) until Month 12 (Maintenance Phase). The participants had the option to continue the regimen in the Extension Phase.

Arm type	Experimental
Investigational medicinal product name	Cabotegravir (CAB) + Rilpivirine (RPV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Tablet
Routes of administration	Intramuscular use, Oral use

Dosage and administration details:

Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. At the month 1 visit, the last dose of oral CAB + RPV was given, followed by the first 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM) and then once every 2 months (Q2M) until end of Extension Phase.

<b>Arm title</b>	Direct to injections (D2I)
------------------	----------------------------

Arm description:

Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until Month 11. The participants had the option to continue the regimen in the Extension Phase.

Arm type	Experimental
Investigational medicinal product name	Cabotegravir (CAB) + Rilpivirine (RPV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until end of Extension Period.

<b>Arm title</b>	Biktarvy (BIK)
Arm description:	
Participants with HIV-1 received BIK tablet orally until month 12. BIK was a fixed dose combination of 50 mg Bictegravir (BIC) + 200 mg Emtricitabine (FTC) + 25 mg Tenofovir alafenamide (TAF).	
Arm type	Active comparator
Investigational medicinal product name	Bictegravir (BIC) + Emtricitabine (FTC) + Tenofovir alafenamide (TAF)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

**Dosage and administration details:**

Participants with HIV-1 received BIK tablet orally until month 12. BIK was a fixed dose combination of 50 mg Bictegravir (BIC) + 200 mg Emtricitabine (FTC) + 25 mg Tenofovir alafenamide (TAF) up to Month 12.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Oral lead-in phase (OLI)	Direct to injections (D2I)	Biktarvy (BIK)
Started	175	279	227
Completed	152	255	213
Not completed	23	24	14
Consent withdrawn by subject	5	8	9
Physician decision	1	-	1
Adverse event, non-fatal	10	3	1
Protocol Deviation	2	6	1
Protocol-Specified Withdrawal Criterion Met	1	1	-
Lost to follow-up	3	4	2
Lack of efficacy	1	2	-

**Notes:**

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Worldwide 687 participants were enrolled, whereof 681 participants were actually included in the study.

**Period 2**

Period 2 title	Maintenance + Extension Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

**Arms**

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Oral lead-in phase (OLI)
<b>Arm description:</b> Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. At the month 1 visit, the last dose of oral CAB + RPV was given, followed by the first 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM), and second injection of CAB LA 600 mg + RPV LA 900 mg at month 2, and then subsequent injections once every 2 months (Q2M) until Month 12 (Maintenance Phase). The participants had the option to continue the regimen in the Extension Phase.	
Arm type	Experimental
Investigational medicinal product name	Cabotegravir (CAB) + Rilpivirine (RPV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Tablet
Routes of administration	Intramuscular use, Oral use
<b>Dosage and administration details:</b> Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. <b>Arm title</b>	Direct to injections (D2I)

<b>Arm description:</b> Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until Month 11. The participants had the option to continue the regimen in the Extension Phase.	
Arm type	Experimental
Investigational medicinal product name	Cabotegravir (CAB) + Rilpivirine (RPV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use
<b>Dosage and administration details:</b> Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until end of Extension Period.	

<b>Number of subjects in period 2<sup>[2]</sup></b>	Oral lead-in phase (OLI)	Direct to injections (D2I)
Started	173	274
Completed	150	247
Not completed	23	27
Consent withdrawn by subject	4	12
Physician decision	1	1
Adverse event, non-fatal	10	2
Protocol-Specified Withdrawal Criterion Met	1	1
Lost to follow-up	3	4
Lack of efficacy	2	2

Protocol deviation	2	5
--------------------	---	---

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: The participants in Oral lead-in phase (OLI) group and Direct to injections (D2I) group received same treatment regimen in both Maintenance and Extension Periods, hence data was summarized by Maintenance Period and by Maintenance+Extension Period. The Biktarvy (BIK) group was followed only in Maintenance Period, since it was dissolved at the start of Extension Phase, when participants transitioned to Switch Q2M Group or commercial available treatments, based on protocol criteria.

### Period 3

Period 3 title	Extension Period (Month 13 - Month 27)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

<b>Arm title</b>	Switch Q2M Group
------------------	------------------

Arm description:

Eligible participants with HIV-1 who received BIK tablet orally switched treatment after month 12 (Extension Phase) to CAB LA 600 mg + RPV LA 900 mg regimen, administered once every 2 months.

Arm type	Active comparator
Investigational medicinal product name	Cabotegravir (CAB) + Rilpivirine (RPV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Participants received 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM) and then once every 2 months (Q2M) until end of Extension Phase.

<b>Number of subjects in period 3<sup>[3]</sup></b>	Switch Q2M Group
Started	143
Completed	130
Not completed	13
Consent withdrawn by subject	5
Physician decision	2
Adverse event, non-fatal	4
Lost to follow-up	1
Lack of efficacy	1

---

Notes:

[3] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Extension Period followed the participants from Oral lead-in phase (OLI), Direct to injections (D2I) and the Switch Q2M groups. The data for Oral lead-in phase (OLI) and Direct to injections (D2I) groups was summarized and presented by Maintenance Period and by Maintenance+Extension Period, hence were not added in this period. The data for Switch Q2M group was summarized and presented only for Extension Period, as this group was formed at the start of Extension Period.

## Baseline characteristics

### Reporting groups

Reporting group title	Oral lead-in phase (OLI)
-----------------------	--------------------------

Reporting group description:

Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. At the month 1 visit, the last dose of oral CAB + RPV was given, followed by the first 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM), and second injection of CAB LA 600 mg + RPV LA 900 mg at month 2, and then subsequent injections once every 2 months (Q2M) until Month 12 (Maintenance Phase). The participants had the option to continue the regimen in the Extension Phase.

Reporting group title	Direct to injections (D2I)
-----------------------	----------------------------

Reporting group description:

Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until Month 11. The participants had the option to continue the regimen in the Extension Phase.

Reporting group title	Biktarvy (BIK)
-----------------------	----------------

Reporting group description:

Participants with HIV-1 received BIK tablet orally until month 12. BIK was a fixed dose combination of 50 mg Bictegravir (BIC) + 200 mg Emtricitabine (FTC) + 25 mg Tenofovir alafenamide (TAF).

Participants with HIV-1 who started OLI were administered with Cabotegravir and Rilpivirine (CAB + RPV) tablets orally for one month. At the month 1 visit, the last dose of oral 30 mg CAB + 25 mg RPV tablets were given, followed by the first 600 mg CAB LA + 900 mg RPV LA intramuscular injection, and second injection of CAB LA 600 mg + RPV LA 900 mg at month 2, and then subsequent injections every 2 months (Q2M) until Month 12. Participants with HIV-1 who started with D2I, received the first injection of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading dose at Day 1 followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and 3 followed by Q2M until Month 11.

## End points

### End points reporting groups

Reporting group title	Oral lead-in phase (OLI)
Reporting group description:	
Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. At the month 1 visit, the last dose of oral CAB + RPV was given, followed by the first 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM), and second injection of CAB LA 600 mg + RPV LA 900 mg at month 2, and then subsequent injections once every 2 months (Q2M) until Month 12 (Maintenance Phase). The participants had the option to continue the regimen in the Extension Phase.	
Reporting group title	Direct to injections (D2I)
Reporting group description:	
Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until Month 11. The participants had the option to continue the regimen in the Extension Phase.	
Reporting group title	Biktarvy (BIK)
Reporting group description:	
Participants with HIV-1 received BIK tablet orally until month 12. BIK was a fixed dose combination of 50 mg Bictegravir (BIC) + 200 mg Emtricitabine (FTC) + 25 mg Tenofovir alafenamide (TAF).	
Reporting group title	Oral lead-in phase (OLI)
Reporting group description:	
Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. At the month 1 visit, the last dose of oral CAB + RPV was given, followed by the first 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM), and second injection of CAB LA 600 mg + RPV LA 900 mg at month 2, and then subsequent injections once every 2 months (Q2M) until Month 12 (Maintenance Phase). The participants had the option to continue the regimen in the Extension Phase.	
Reporting group title	Direct to injections (D2I)
Reporting group description:	
Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until Month 11. The participants had the option to continue the regimen in the Extension Phase.	
Reporting group title	Switch Q2M Group
Reporting group description:	
Eligible participants with HIV-1 who received BIK tablet orally switched treatment after month 12 (Extension Phase) to CAB LA 600 mg + RPV LA 900 mg regimen, administered once every 2 months.	
Subject analysis set title	Q2M (OLI + D2I)

**Primary: Percentage of participants with plasma human immunodeficiency viruses (HIV)-1 ribonucleic acid (RNA) greater than or equal to ( $\geq$ ) 50 copies per milliliter (c/mL) at Month 12/11 - ITT-E Population**

End point title	Percentage of participants with plasma human immunodeficiency viruses (HIV)-1 ribonucleic acid (RNA) greater than or equal to ( $\geq$ ) 50 copies per milliliter (c/mL) at Month 12/11 - ITT-E Population <sup>[1]</sup>
-----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Percentage of participants with plasma HIV 1 RNA  $\geq$  50 c/mL at month 12 was assessed using the food and drug administration (FDA) snapshot algorithm. For the Q2M arm, data from the Q2M OLI participants at Month 12 visit and Q2M D2I participants at Month 11 visit were combined as the study objective was to demonstrate the non-inferior antiviral activity of (Q2M) (OLI+ D2I combined) compared to BIK. For BIK arm, data was collected at month 12 visit. Month 12/11 refers to the Month 12 (OLI and BIK) visit/Month 11 (DTI) visit. The FDA snapshot algorithm defines a participant's virologic response status using only the viral load at the predefined time point within a window of time (HIV-RNA equal to or above 50 copies/mL and HIV-RNA below 50 copies/mL), along with study drug discontinuation status. The third category of the FDA snapshot ("No virologic data") is not pre-defined as an endpoint and therefore not reported separately.

End point type	Primary
----------------	---------

End point timeframe:

At month 12/11

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: As per study design, the endpoints were presented for OLI + D2I arms combined as Q2M. Whereas, the baseline period was separated as OLI and D2I.

For the Q2M arm, data from the Q2M OLI participants at Month 12 visit and Q2M D2I participants at Month 11 visit were combined as the study objective was to demonstrate the non-inferior antiviral activity of (Q2M) (OLI+ D2I combined) compared to BIK. For BIK arm, data was collected at month 12 visit. Month 12/11 refers to the Month 12 (OLI and BIK) visit/Month 11 (DTI) visit. The FDA snapshot algorithm defines a participant's virologic response status using only the viral load at the predefined time point within a window of time (HIV-RNA equal to or above 50 copies/mL and HIV-RNA below 50 copies/mL), along with study drug discontinuation status. The third category of the FDA snapshot ("No virologic data") is not pre-defined as an endpoint and therefore not reported separately.

End point type	Secondary
----------------	-----------

End point timeframe:

At month 12/11

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: As per study design, the endpoints were presented for OLI + D2I arms combined as Q2M. Whereas, the baseline period was separated as OLI and D2I.

### Secondary: Change from baseline in renal biomarkers: specific serum beta-2 microglobulin, cystatin c, retinol binding protein, urine beta-2 microglobulin (milligrams per liter [mg/L])

End point title	Change from baseline in renal biomarkers: specific serum beta-2 microglobulin, cystatin c, retinol binding protein, urine beta-2 microglobulin (milligrams per liter [mg/L]) <sup>[15]</sup>
-----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## End point description:

Serum samples were collected to evaluate renal specific biomarkers: specific serum beta-2 microglobulin, cystatin c, retinol binding protein, urine beta-2 microglobulin. Baseline value is defined as latest pre-treatment assessment with a non-missing value, including those from unscheduled visits. Change from baseline is defined as post-dose visit value minus baseline value. For the Q2M arm, data from the Q2M OLI participants at Month 6 and 12 visit and Q2M D2I participants at Month 5 and 11 visit were combined as the study objective was to demonstrate the non-inferior antiviral activity of (Q2M) (OLI+ D2I combined) compared to BIK. For BIK arm, data was collected at month 6 and 12 visit. Month 6/5 refers to the Month 6 (OLI and BIK) visit/Month 5 (DTI) visit. Month 12/11 refers to the Month 12 (OLI and BIK) visit/Month 11 (DTI) visit.

End point type	Secondary

## Secondary: HIV treatment satisfaction change questionnaire (HIVTSQc) total score at Month 12/11

End point title	HIV treatment satisfaction change questionnaire (HIVTSQc) total score at Month 12/11 <sup>[26]</sup>
-----------------	------------------------------------------------------------------------------------------------------

### End point description:

HIV treatment satisfaction change questionnaire (HIVTSQc) total Score is computed with items 1-11 which were summed to produce a total score range of -33 to 33. Higher score indicated greater improvement in the satisfaction with the treatment and lower score indicated greater deterioration in treatment satisfaction. A score of 0 represents no change. For the Q2M arm, data from the Q2M OLI participants at Month 12 visit and Q2M D2I participants at Month 11 visit were combined as the study objective was to demonstrate the non-inferior antiviral activity of (Q2M) (OLI+ D2I combined) compared to BIK. For BIK arm, data was collected at month 12 visit. Month 12/11 refers to the Month 12 (OLI and BIK) visit/Month 11 (DTI) visit.

End point type	Secondary
----------------	-----------

### End point timeframe:

At Month 12/11

### Notes:

[26] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As per study design, the endpoints were presented for OLI + D2I arms combined as Q2M. Whereas, the baseline period was separated as OLI and D2I.

End point values	Biktarvy (BIK)	Q2M (OLI + D2I)		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	214	426		
Units: Scores on scale				
arithmetic mean (standard deviation)	16.89 (± 14.299)	26.97 (± 10.135)

## Secondary: Individual item scores of HIVTSQc at Month 12/11

End point title	Individual item scores of HIVTSQc at Month 12/11 <sup>[27]</sup>
-----------------	------------------------------------------------------------------

### End point description:

Individual item scores were rated on a scale of +3 (much more satisfied', 'much more convenient', 'much more flexible') to -3 (much less satisfied', 'much less convenient', 'much less flexible'). Higher score indicates greater improvement, and lower score indicates greater deterioration in satisfaction with each aspect of treatment. A score of 0 represents no change. For the Q2M arm, data from the Q2M OLI participants at Month 12 visit and Q2M D2I participants at Month 11 visit were combined as the study objective was to demonstrate the non-inferior antiviral activity of (Q2M) (OLI+ D2I combined) compared to BIK. For BIK arm, data was collected at month 12 visit. Month 12/11 refers to the Month 12 (OLI and BIK) visit/Month 11 (DTI) visit.

End point type	Secondary
----------------	-----------

### End point timeframe:

At Month 12/11

### Notes:

[27] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As per study design, the endpoints were presented for OLI + D2I arms combined as Q2M. Whereas, the baseline period was separated as OLI and D2I.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All cause mortality, non-serious adverse events (Non-SAEs) and serious adverse events (SAEs) were collected up to end of Extension Phase (approximately Month 27).

Adverse event reporting additional description:

AEs are reported based on Safety set population, which included all randomized participants who received at least one dose of study drug, based on the study phase they were included in. The Safety set included all participants irrespective of eligibility criteria violation and GCP non-compliance, since they received at least a study intervention d

Assessment type	Systematic

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	24.1
--------------------	------

### Reporting groups

Reporting group title	Oral lead-in phase (OLI)
-----------------------	--------------------------

Reporting group description:

Participants with human immunodeficiency viruses (HIV)-1 who chose oral lead in (OLI) received oral 30 milligram (mg) Cabotegravir (CAB) tablet + 25 mg Rilpivirine (RPV) tablet once daily (QD) for one month. At the month 1 visit, the last dose of oral CAB + RPV was given, followed by the first 600 mg CAB long-acting (LA) + 900 mg RPV LA intramuscular injection (IM), and second injection of CAB LA 600 mg + RPV LA 900 mg at month 2, and then subsequent injections once every 2 months (Q2M) until Month 12 (Maintenance Phase). The participants had the option to continue the regimen in the Extension Phase.

Reporting group title	Switch Q2M Group
-----------------------	------------------

Reporting group description:

Eligible participants with HIV-1 who received BIK tablet orally switched treatment after month 12 (Extension Phase) to CAB LA 600 mg + RPV LA 900 mg regimen, administered once every 2 months.

Reporting group title	Biktarvy (BIK)
-----------------------	----------------

Reporting group description:

Participants with HIV-1 received BIK tablet orally until month 12. BIK was a fixed dose combination of 50 mg Bictegravir (BIC) + 200 mg Emtricitabine (FTC) + 25 mg Tenofovir alafenamide (TAF).

Reporting group title	Direct to injections (D2I)
-----------------------	----------------------------

Reporting group description:

Participants with HIV-1 who chose direct to injections (D2I) received the first injections of 600 mg CAB LA + 900 mg RPV LA, IM as initial loading doses at Day 1 one month, followed by second and third subsequent injections (CAB LA 600 mg + RPV LA 900 mg) at month 1 and month 3 followed by Q2M until Month 11. The participants had the option to continue the regimen in the Extension Phase.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 June 2020	The primary reason for protocol amendment 01 is to add minor clarifications to address study completion, PK collection, and endpoint timings. Country-specific details were added to Appendix 10 to address UK MHRA requirements. The protocol short title was updated. Corrections to typographical errors in protocol text and title were made throughout.
08 September 2021	The primary reason for protocol amendment 02 is to address and clarify comments raised during the course of the study and to implement country specific changes following regulatory review.
10 February 2022	The primary reason for protocol amendment 03 is to address and clarify comments raised during the course of the study.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
