Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 March 2025
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	28 October 2024
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Substudy A (SSA): 1- To assess the dose limiting toxicity (DLT) rate and estimate the maximum tolerated dose (MTD) of sasanlimab in combination with encorafenib and binimetinib to determine the recommended Phase 2 dose (RP2D) for the combination. 2- To assess the durable objective response rate (ORR) of sasanlimab in combination with encorafenib and binimetinib.

Substudy B (SSB): 1-) To assess the DLT rate and estimate the MTD of sasanlimab in combination with axitinib and SEATGT to determine the RP2D for the combination. 2-) To assess the ORR of sasanlimab in combination with axitinib and SEATGT.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Subject disposition

Recruitment

Recruitment details:

Sub-study A (SSA) was planned to be conducted in 2 parts: Phase 1b and Phase 2. Due to a business decision, Phase 2 was not initiated, hence no participants were enrolled for Phase 2 of SSA. Sub-study B (SSB) was conducted in 2 parts: Phase 1b and Phase 2.

Pre-assignment

Screening details:

57 participants signed informed consent and 34 participants were enrolled in the study. Of these 34 participants, 13 were enrolled in Sub-study A and 21 in Sub-study B (9 in Phase [Ph] 1b and 12 in Phase 2).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

There was no blinding.

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase 1b of SSA: Sasa(300mg)+Enco(300mg)+Bini (45mg)

Arm description:

Participants with non-small cell lung cancer (NSCLC) with BRAFV600 mutations were administered a single dose of sasanlimab 300 milligrams (mg) subcutaneously on Day 1 of each cycle along with once daily (QD) oral dose of 300 mg encorafenib and twice daily (BID) oral dose of 45 mg binimetinib during each 28-day cycle.

Arm type	Experimental
Investigational medicinal product name	Sasanlimab 300 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a single dose of sasanlimab 300 mg administered subcutaneously on Day 1 of each cycle.

Investigational medicinal product name	Binimetinib 45 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Binimetinib 45 mg orally twice daily.

Investigational medicinal product name	Encorafenib 300 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received Encorafenib 300 mg orally once daily.

Arm title	Phase 1b of SSA: Sasa(300mg)+Enco(450mg)+Bini (45mg)
------------------	--

Arm description:

Participants with NSCLC with BRAFV600 mutations were administered a single dose of sasanlimab 300 mg subcutaneously on Day 1 of each cycle along with QD oral dose of 450 mg encorafenib and BID oral dose of 45 mg binimetinib during each 28-day cycle.

Arm type	Experimental
Investigational medicinal product name	Sasanlimab 300 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a single dose of sasanlimab 300 mg administered subcutaneously on Day 1 of each cycle.

Investigational medicinal product name	Binimetinib 45 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Binimetinib 45 mg orally twice daily.

Investigational medicinal product name	Encorafenib 450 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received Encorafenib 450 mg orally once daily.

Arm title	Phase 1b of SSB: Sasanlimab (225 mg) + Axitinib (5 mg)
------------------	--

Arm description:

Participants with NSCLC and who received any line of therapy for advanced/metastatic NSCLC were administered a single dose of sasanlimab 225 mg every 3 weeks (Q3W) subcutaneously along with BID oral dose of 5 mg axitinib on Day 1 of each cycle during each 21-day cycle.

Arm type	Experimental
Investigational medicinal product name	Axitinib 5mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Axitinib 5mg orally twice daily.

Investigational medicinal product name	Sasanlimab 225 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a single dose of sasanlimab 225 mg Q3W administered subcutaneously on Day 1 of each cycle.

Arm title	Phase 1b of SSB: Sasa (225mg) + Axit (5 mg) + SEA-TGT(1mg/kg)
------------------	---

Arm description:

Participants with NSCLC and who received any line of therapy for advanced/metastatic NSCLC were administered a single dose of sasanlimab 225 mg Q3W subcutaneously along with BID oral dose of 5 mg axitinib on Day 1 of each cycle and Q3W intravenous (IV) infusion of 1 milligram per kilogram (mg/kg)

SEA-TGT on Day 1 of each cycle during each 21-day cycle.

Arm type	Experimental
Investigational medicinal product name	Sasanlimab 225 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a single dose of sasanlimab 225 mg Q3W administered subcutaneously on Day 1 of each cycle.

Investigational medicinal product name	SEA-TGT 1 mg/kg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received a single dose of SEA-TGT 1 mg/kg administered intravenously on Day 1 of each cycle.

Investigational medicinal product name	Axitinib 5mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Axitinib 5mg orally twice daily.

Arm title	Ph2SSB:1L NSCLC PDL1:TPS1-49%(mg)Sasa225+Axit5+SEA-TGT(1/kg)
------------------	--

Arm description:

Participants with NSCLC who were treatment-naïve for advanced/metastatic disease with low programmed death ligand - 1 (PD-L1) levels tumor proportion score (TPS)-49 percent (%) were administered a single dose of sasanlimab 225 mg Q3W subcutaneously along with BID oral dose of 5 mg axitinib on Day 1 of each cycle and Q3W IV infusion of 1 mg/kg SEA-TGT on Day 1 of each cycle during each 21-day cycle.

Arm type	Experimental
Investigational medicinal product name	Sasanlimab 225 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a single dose of sasanlimab 225 mg Q3W administered subcutaneously on Day 1 of each cycle.

Investigational medicinal product name	SEA-TGT 1 mg/kg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received a single dose of SEA-TGT 1 mg/kg administered intravenously on Day 1 of each cycle.

Investigational medicinal product name	Axitinib 5 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

Participants received Axitinib 5mg orally twice daily.

Arm title	Ph2SSB:1L NSCLC/PDL1:TPS>=50%9(mg)Sasa225+Axit5+SEA-TGT(1/kg)
------------------	--

Arm description:

Participants with NSCLC who were treatment-naïve for advanced/metastatic disease with high PD-L1 (TPS greater than or equal to [\geq]50%) were administered a single dose of sasanlimab 225 mg Q3W subcutaneously along with BID oral dose of 5 mg axitinib on Day 1 of each cycle and Q3W IV infusion of 1 mg/kg SEA + TGT on Day 1 of each cycle during each 21-day cycle.

Arm type	Experimental
Investigational medicinal product name	Sasanlimab 225 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a single dose of sasanlimab 225 mg Q3W administered subcutaneously on Day 1 of each cycle.

ORR was defined as percentage of participants with confirmed CR or PR according to RECIST v1.1 based on investigator assessment, from the date of first CR or PR until the date of the first documentation of PD, death, or start of new anticancer therapy. CR was defined as complete disappearance of all target lesions with exception of nodal disease. All target nodes must decrease to normal size (short axis <10 millimeter [mm]). PR was defined as greater than or equal to 30% decrease under baseline of the sum of diameters of all target measurable lesions. PD was defined as 20% increase in sum of diameters of target measurable lesions above smallest sum observed (over baseline if no decrease in the sum was observed during therapy), with a minimum absolute increase of 5 mm. In this endpoint, number of ADA-positive and NAb-positive participants has been presented. A participant was considered ADA (or NAb) positive if (1) baseline titer was missing or negative and participant had ≥ 1 post-treatment positive titer (treatment-induced), or (2) positive titer at baseline and had a \geq [4-fold dilution increase] in titer (equivalent to 0.602 unit increase in logarithm to base 10 (log10) titer from baseline in ≥ 1 post-treatment sample (treatment-boosted). Immunogenicity analysis set was a subset of the safety analysis set (participants who received at least 1 dose of study drug) and included participants who had at least 1 analyzed sasanlimab ADA/NAb sample. All participants included in 'Subjects Analyzed' contributed data to the table; however, may not have evaluable data for every row. DR was defined for participants with confirmed objective response (OR) as time from date of first documentation of OR to the date of first documentation of PD or death (any cause), whichever occurred first. OR=CR or PR according to RECIST v1.1 based on investigator assessment. CR and PR must be confirmed by repeat assessments performed no <4 weeks after criteria for response were first met. CR=complete disappearance of all target lesions (TLs) with exception of nodal disease. All target nodes must decrease to normal size (short axis <10 mm). PR=greater than or equal to 30% decrease under baseline of the sum of diameters of all target measurable lesions (TMLs). ORR was defined as percentage of participants with confirmed CR or PR according to RECIST v1.1 based on investigator assessment, from the date of first CR or PR until the date of the first documentation of PD, death, or start of new anticancer therapy. CR was defined as complete disappearance of all target lesions with exception of nodal disease. All target nodes must decrease to normal size (short axis <10 mm). PR was defined as greater than or equal to 30% decrease under baseline of the sum of diameters of all target measurable lesions. PD was defined as 20% increase in sum of diameters of target measurable lesions above smallest sum observed (over baseline if no decrease in the sum was observed during therapy), with a minimum absolute increase of 5 mm. ORR was defined as percentage of participants with confirmed CR or PR according to RECIST v1.1 based on investigator assessment, from the date of first CR or PR until the date of the first documentation of disease progression (PD), death, or start of new anticancer therapy. CR was defined as complete disappearance of all target lesions with exception of nodal disease. All target nodes must decrease to normal size (short axis <10 millimeter [mm]). PR was defined as greater than or equal to 30% decrease under baseline of the sum of diameters of all target measurable lesions. PD was defined as 20% increase in sum of diameters of target measurable lesions above smallest sum observed (over baseline if no decrease in the sum was observed during therapy), with a minimum absolute increase of 5 mm. Full analysis set included all participants who received at least 1 dose of study drug.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the start of study treatment (Cycle1 Day1) up to 30 days after last dose of study treatment (maximum exposure = 38.66 months; maximum follow-up approximately 39.66 months)

Adverse event reporting additional description:

Same event may appear as both non-serious adverse event (non-SAE) and SAE but are distinct events. An event may be categorized as serious in 1 participant and non-serious in another, or a participant may have experienced both SAE and non-SAE. Safety analysis set included all participants who received at least 1 dose of study drug.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 October 2021	For Sub-Study B, reduced frequency of troponin clinical laboratory testing from every visit to Screening/C1D1 and when clinically indicated, because routine monitoring of troponin is not indicated for axitinib or approved immune checkpoint inhibitors (Section 13.10.1). Injectables were removed from the list of combined hormonal birth control methods that are highly effective and user dependent per new Pfizer standard because there are no approved injectable agents in this category (Sections 12.10.2.4 and 13.10.2.4.)

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to a business decision, no participant was enrolled in Phase 2 of sub-study A. Hence, Phase 2 was not initiated, and no data was collected and there are no results for this in the record.

Notes:
