Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002827-PIP01-20
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 September 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 September 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the effect of bilateral treatment with an adeno-associated virus vector with a serotype 5 capsid, a human rhodopsin kinase promoter, and the retinitis pigmentosa guanosine triphosphatase regulator gene (AAV5-hRKp.RPGR) on functional vision as measured by vision-guided mobility assessment (VMA).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 March 2021
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	48 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Switzerland: 10
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	United Kingdom: 13
Country: Number of subjects enrolled	Israel: 6
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	United States: 35
Worldwide total number of subjects	97
EEA total number of subjects	32

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	2
Adolescents (12-17 years)	4
Adults (18-64 years)	91
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total 97 adult and pediatric subjects were enrolled, out of which 94 subjects completed. Study consisted of Cohort (C) 1, 2 and pediatric cohort. C 1 subjects were randomised to assess safety after treatment up to Week 10. Randomisation for C 2 began after the IDMC completed their review of C 1 safety data and recommended to continue study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Deferred Group (Control Group)

Arm description:

Adults (cohort [C] 1 and 2) and pediatric subjects with X-linked retinitis pigmentosa (XLRP) caused by mutations in the human retinitis pigmentosa guanosine triphosphatase regulator (RPGR) gene (RPGR-XLRP) were randomised in the Deferred Group and did not receive any treatment in the study. Subjects were followed up for safety from Day 1 up to Week 52.

Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Immediate Treatment Group: RPGR2e11

Arm description:

Adults (cohort 1 and 2) and pediatric subjects with RPGR-XLRP were randomised to receive an adeno-associated virus vector with a serotype 5 capsid, a human rhodopsin kinase promoter, and the retinitis pigmentosa guanosine triphosphatase regulator gene (AAV5-hRKp.RPGR) therapy as a subretinal injection on the day of first eye surgery (Day 1) and second eye surgery (any time between Day 8 to Day 22) with 2.0×10^{11} viral genome per millilitre (vg/mL) (RPGR2e11) dose (300 microlitres [mL] to 800 mL in each eye). Subjects were followed up for safety up to Week 52 after first dose of study drug on Day 1.

Arm type	Experimental
Investigational medicinal product name	RPGR2e11
Investigational medicinal product code	
Other name	Botaretigene sparoparvovec
Pharmaceutical forms	Solution for injection
Routes of administration	Subretinal use

Dosage and administration details:

Subjects received AAV5-hRKp.RPGR gene therapy with (RPGR2e11) at a dose of 300 mL to 800 mL in each eye on the day of first eye surgery on Day 1 and on the day of second eye surgery between Day 8 to Day 22.

Arm title	Immediate Treatment Group: RPGR4e11
------------------	-------------------------------------

Arm description:

Adults (cohort 1 and 2) and pediatric subjects with RPGR-XLRP were randomised to receive AAV5-hRKp.RPGR gene therapy as a subretinal injection on the day of first eye surgery (Day 1) and second eye surgery (any time between Day 8 to Day 22) with 4.0×10^{11} vg/mL (RPGR4e11) dose (300 mL to 800 mL in each eye). Subjects were followed up for safety up to Week 52 after first dose of study drug on Day 1.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	RPGR4e11
Investigational medicinal product code	
Other name	Botaretigene sparoparvovec
Pharmaceutical forms	Solution for injection
Routes of administration	Subretinal use

Dosage and administration details:

Subjects received AAV5-hRKp.RPGR gene therapy with (RPGR4e11) at a dose of 300 mcL to 800 mcL in each eye on the day of first eye surgery on Day 1 and on the day of second eye surgery between Day 8 to Day 22.

Number of subjects in period 1	Deferred Group (Control Group)	Immediate Treatment Group: RPGR2e11	Immediate Treatment Group: RPGR4e11
Started	33	33	31
Treated	0 ^[1]	32	30
Completed	33	32	29
Not completed	0	1	2
Consent withdrawn by subject	-	1	-
Subject did not meet inclusion criteria	-	-	1
Lost to follow-up	-	-	1

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Only reported subjects were planned to be included in this milestone.

----------------------------	--------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

Cohort 2 subjects with RPGR-XLRP were randomised and did not receive any treatment in the study. Subjects were followed up for safety from Day 1 up to Week 52.

Primary: Cohort 2: Percentage of Subjects With Vision-guided Mobility Assessment (VMA) Response in Binocular Assessment at Week 52

End point title	Cohort 2: Percentage of Subjects With Vision-guided Mobility Assessment (VMA) Response in Binocular Assessment at Week 52
-----------------	---

End point description:

Percentage of subjects with VMA response in binocular assessment at Week 52 was reported. The VMA tests the ability of a subject to navigate through a maze at various illumination (lux) levels and presents an environment with obstacles that was meant to simulate real-life conditions at varying light levels. VMA responder was defined as a subject who passes a lux level at least 2 levels lower at Week 52 compared to the lowest lux level the subject passed at baseline. Intent-to-treat (ITT) analysis set included all adult subjects who were randomly assigned to a treatment group (treated or control group) in Cohort 2. In this endpoint pooled data for immediate treatment groups RPGR2e11 and RPGR4e11 was planned to be reported.

End point title	Cohort 2: Change From Baseline in the Modified Low Luminance Questionnaire (mLLQ)- Extreme Lighting Domain Score at Week 52
-----------------	---

End point description:

The mLLQ was 30-item disease-specific questionnaire for use in eye diseases to assess self reported visual problems under low luminance and at night. The instrument consisted of 6 domains and was scored by each of its 6 domains (extreme lighting, mobility, general dim lighting, peripheral vision, driving, emotional distress). The extreme lighting domain comprised of 7 items (Items 1 to 7) and was used to assess patient-reported functional vision under low light/at night and in extreme (ie, bright light) conditions. Response options included 5- point Likert Scales ranging from 'No difficulty at all' to 'Not able to' and 'None of the time' to 'All of the time'. The mLLQ uses scale from 0 to 100, higher scores reflect a higher level of functioning. A positive change from baseline reflects improvement; negative reflects worsening. ITT analysis set. In this endpoint pooled data for immediate treatment groups RPGR2e11 and RPGR4e11 was planned to be reported.

Secondary: Cohort 2: Change From Baseline in Low Luminance Visual Acuity (LLVA) by Early Treatment Diabetic Retinopathy Study (ETDRS) Chart Letter Score in Monocular Assessment at Week 52

End point title	Cohort 2: Change From Baseline in Low Luminance Visual Acuity (LLVA) by Early Treatment Diabetic Retinopathy Study (ETDRS) Chart Letter Score in Monocular Assessment at Week 52
-----------------	--

End point description:

Change from baseline in LLVA by ETDRS chart letter score in monocular assessment at Week 52 were reported. The LLVA was determined using the ETDRS chart by counting the number of ETDRS letters read under low light conditions. ETDRS chart letter score ranged from 0 to 100 letters. 20/20 snellen was equivalent to 85 letters on the ETDRS chart or 0 logMAR. The higher ETDRS score indicated the better vision. ITT analysis set included all adult subjects who were randomly assigned to a treatment group (treated or control group) in Cohort 2. In this endpoint pooled data for immediate treatment groups RPGR2e11 and RPGR4e11 was planned to be reported.

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs)
-----------------	---

End point description:

Adverse event (AE) was any untoward medical occurrence in a clinical study subject administered a medicinal (investigational or non-investigational) product. AE does not necessarily have a causal relationship with intervention. Any AE occurring on or after the initial administration of study drug and on or before the last visit of the study was considered treatment-emergent for immediate treatment group. Any AE occurring on or after the last baseline visit (Day 1) and on or before the last visit of the study was considered treatment-emergent for deferred group. TEAEs included serious and non-serious events. Analysis population included all subjects randomised to immediate treatment and had received AAV5-hRKp.RPGR administration in at least 1 eye, and all subjects randomised to deferred treatment and had completed at least 1 baseline assessment during deferred period.

Reporting groups

Reporting group title	Deferred Group (Control Group)
-----------------------	--------------------------------

Reporting group description:

Adults (cohort 1 and 2) and pediatric subjects with X-linked retinitis pigmentosa (XLRP) caused by mutations in the human retinitis pigmentosa guanosine triphosphatase regulator (RPGR) gene (RPGR-XLRP) were randomised in the Deferred Group and did not receive any treatment in the study. Subjects were followed up for safety from Day 1 up to Week 52.

Reporting group title	Immediate Treatment Group: RPGR2e11
-----------------------	-------------------------------------

Reporting group description:

Adults (cohort 1 and 2) and pediatric subjects with RPGR-XLRP were randomised to receive adeno-associated virus vector with a serotype 5 capsid-human rhodopsin kinase promoter retinitis pigmentosa guanosine triphosphatase regulator (AAV5-hRKp.RPGR) gene therapy as a subretinal injection on the day of first eye surgery (Day 1) and second eye surgery (any time between Day 8 to Day 22) with 2.0×10^{11} viral genome per millilitre (vg/mL) (RPGR2e11) dose (300 microlitres [mL] to 800 mL in each eye). Subjects were followed up for safety up to Week 52 after first dose of study drug (Day 1).

Reporting group title	Immediate Treatment Group: RPGR4e11
-----------------------	-------------------------------------

Reporting group description:

Adults (cohort 1 and 2) and pediatric subjects with RPGR-XLRP were randomised to receive AAV5-hRKp.RPGR gene therapy as a subretinal injection on the day of first eye surgery (Day 1) and second eye surgery (any time between Day 8 to Day 22) with 4.0×10^{11} vg/mL (RPGR4e11) dose (300 mL to 800 mL in each eye). Subjects were followed up for safety up to Week 52 after first dose of study drug (Day 1).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 July 2020	The overall reason for this amendment was to add research sample in Schedule of Activities for Deferred Treatment Group, correct the inclusion and exclusion criteria, and correct route of drug administration in Appendix 6.
26 August 2020	The overall reason for this amendment was to update the inclusion criteria to a retinal function assessment instead of a functional vision assessment, address health authority feedback, and to make administrative and operational changes.
04 February 2021	The overall reason for this amendment was to update the screening timeline, respond to regulatory input requiring subjects to consent to the long-term follow up study at the time of consent to MGT-RPGR-021, address safety in the second eye by gating the first 3 treated patients, and make administrative and operational changes.
31 March 2021	The overall reason for this amendment was to update numerous sections of the protocol with new or revised details, to note changes in procedures/methods, and to clarify content.
15 July 2021	The overall reason for this amendment was to update numerous sections of the protocol with new or revised details, to note changes in procedures/methods, and to make and/or clarify administrative and operational changes.
10 November 2021	The overall reason for this amendment was to revise time frames in relation to randomization and Non-Ocular Exclusion Criteria, to update sections of the protocol with new or revised details, and to make and/or clarify administrative and operational changes.
24 December 2021	The overall reason for this amendment was to update sections of the protocol with additional or revised specifics to enable clarity and implement administrative and operational changes. The update also contains changes to the population for efficacy analysis to allow for maze refinement prior to starting of Cohort 2.
06 April 2022	The overall reason for this amendment was to revise the definition of Cohort 1 and add that subjects who discontinue from Cohort 1 prior to Week 10 may be replaced. Additional changes have been made to align the protocol with requests made by Health Authorities following their review and also to provide further clarification to investigators on some aspects of the study.
14 July 2022	The overall reason for this amendment was to revise the objectives and endpoints of the study to align with data from other studies and utilize a more sensitive and appropriate primary endpoint of functional vision. The section on statistical power has been updated based on the change in primary endpoint. Additional time points for assessing viral shedding have been added and the total blood volume to be collected has been updated.
16 October 2023	The overall reason for this amendment was to update sections of the protocol with additional or revised specifics to enable clarity and implement administrative and operational changes including sponsorship transfer from MeiraGTx UK II Ltd to Janssen Research & Development.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
