Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 July 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 August 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the efficacy of efgartigimod PH20 SC compared to placebo in the treatment of participants with pemphigus vulgaris

Protection of trial subjects:

The protocol, protocol amendments, ICFs, relevant supporting information, and participant recruitment information were approved by the IEC/IRB and regulatory agency before participants were enrolled. This study was conducted in accordance with the protocol and consensus ethical principles derived from international guidelines, including the Declaration of Helsinki, applicable ICH GCP guidelines, and applicable laws and regulations.

Participants or their legally authorized representative were required to sign a statement of informed consent that met the requirements of the local regulations, ICH guidelines, privacy and data protection requirements, where applicable, and the IRB/IEC or study center.

Background therapy:

All participants, regardless of treatment assignment, concomitantly received oral prednisone (or equivalent such as prednisolone) at 0.5 mg/kg qd as a starting dose. Except for oral prednisone (or equivalent), no other systemic pemphigus therapies (eg, immunosuppressants, IVIg, immunoadsorption, anti-CD20 biologics) were permitted during the trial. In addition to oral prednisone, 204 of 222 patients received concomitant therapy. Concomitant therapies were defined as any therapy or procedure that was started on or after the date of the first IMP dose.

Evidence for comparator:

Placebo

Actual start date of recruitment	12 October 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	190
From 65 to 84 years	32
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 82 study sites that enrolled participants in 20 countries. A total of 222 participants were randomized in a 2:1 ratio to receive IMP: 147 to the efgartigimod PH20 SC arm and 75 to the placebo arm. Overall, 190 participants with pemphigus vulgaris (PV) and 32 participants with pemphigus foliaceus (PF) were enrolled.

Pre-assignment

Screening details:

All participants were adults, aged from 18 years, with moderate-to-severe pemphigus vulgaris (PV) or with pemphigus foliaceus (PF). Enrolled participants were either those who are newly diagnosed or having flare.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Subject, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	EFG PH20 SC - PV + PF

Arm description:

Patients randomized to receive weekly administrations of efgartigimod PH20 until CRmin (complete remission on minimal prednisone therapy) or end of treatment period or early roll-over to the open-label extension study ARGX-113-1905. All participants received concurrent oral prednisone (or equivalent) at a starting dosage of 0.5 mg/kg/day. The dose of prednisone was adjusted according to recommendations as per protocol.

Arm type	Experimental
Investigational medicinal product name	Efgartigimod PH20 SC
Investigational medicinal product code	ARGX-113
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Efgartigimod PH20 SC 1000 mg once weekly for up to 30 weeks. All participants received concurrent oral prednisone (or equivalent) at a starting dosage of 0.5 mg/kg/day.

Arm title	PBO PH20 SC - PV + PF
------------------	-----------------------

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 February 2021	<p>Protocol, version 2.0</p> <p>A secondary objective and endpoint were added to measure the health impact of glucocorticoid use in participants with pemphigus.</p> <p>Training for self-administration and caregiver-supported administration were implemented to allow these types of administration in OLE study ARGX-113-1905.</p> <p>Assessments of vaccine-induced immunity in the context of efgartigimod treatment were added.</p> <p>The upper age limit of participants was removed.</p> <p>Changes to the contraceptive requirements based on new data about the IMP were implemented.</p> <p>Participants with specific cancers were allowed in the study if they were adequately treated before they started the study.</p> <p>It was clarified that dapsone use within 2 months of baseline was not exclusionary.</p> <p>A new criterion was added allowing the withdrawal of a participant from the study for whom a severe AE, SAE, or clinically significant change in a laboratory test parameter was reported.</p> <p>A transition in efgartigimod concentration from 165 mg/mL to 180 mg/mL was implemented to reduce the volume for each 1000-mg SC injection.</p> <p>Information on estimands and sensitivity analyses was added to align with the ICH guidelines.</p> <p>The prednisone dose escalation criteria were clarified.</p>
18 May 2021	<p>Protocol, version 3.0</p> <p>A requirement to assess direct immunofluorescence/histopathology at screening, if not available from medical history, was added.</p> <p>High-density lipoprotein cholesterol, total cholesterol, and triglycerides were added to the blood chemistry profile.</p> <p>Guidance was added that the investigator should not implement any deviation from the concurrent oral prednisone (or equivalent) regimen except for immediate safety concerns of the participant.</p> <p>Specialty tests (ie, apolipoprotein B, lipoprotein A, fibrinogen, von Willebrand factor, D-dimer, and proprotein convertase subtilisin/kexin type 9 serine protease) were added to further investigate the effect of the IMP on lipid metabolism.</p>
09 June 2022	<p>Protocol, version 4.0</p> <p>The sample size was increased due to (1) the geopolitical situation in Ukraine and impacted areas and (2) the additional analyses (including a supplementary landmark analysis of the primary endpoint performed at week 30) to align with feedback from regulatory interactions.</p> <p>The changes implemented in the Japan country-specific amendment (version 3.1 – Japan) were incorporated.</p> <p>Specialty tests (ie, apolipoprotein B, lipoprotein A, fibrinogen, von Willebrand factor, D-dimer, and proprotein convertase subtilisin/kexin type 9 serine protease) were removed because no relevant safety signals were observed in efgartigimod studies to date.</p> <p>Based on nonclinical teratogenicity and reproductive toxicity data, the inclusion and exclusion criteria were updated: 1) Female participants could stop their contraception method at the date of the last IMP dose; 2) Female participants could become pregnant immediately after the study.</p>

09 December 2022	<p>Protocol, version 5.0</p> <p>To limit the risk of unblinding and ensure data integrity in this double-blinded efgartigimod study, study sites were no longer provided with the real-time albumin and total protein results.</p> <p>The inclusion criteria were updated to allow male participants to donate sperm, in alignment with the general guidance for efgartigimod on sperm donation.</p> <p>The use of male contraception was no longer required until the end of the study but until the last dose of IMP.</p> <p>Relevant changes implemented in the Germany and China country-specific protocols, v4.1-Germany and v4.1-China, were included also in this protocol amendment.</p>
