

Clinical trial results:

A randomized, double-blind, open for active comparator, parallel-group, multicenter Phase 2b study to assess the efficacy and safety of three different doses of P2X3 antagonist (BAY 1817080) versus placebo and elagolix 150 mg in women with symptomatic endometriosis

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 May 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 May 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the dose-response relationship and demonstrate efficacy of eliapixant compared to placebo in women with symptomatic endometriosis.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator:

1. A placebo-controlled design was considered scientifically necessary to differentiate drug effects from the natural course of the disease and placebo effects.
2. Elagolix 150 mg once daily is approved for the treatment of the disease and was given as an active comparator open-label.

Actual start date of recruitment	29 January 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 9

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	215
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This multinational study was conducted between 29 JAN 2021 First Patient First Visit (FPFV) and 03 MAY 2022 Last Patient Last Visit (LPLV) in 20 countries/regions:
Austria, Belgium, Bulgaria, Canada, China, Czech Republic, Finland , Germany, Greece, Hungary, Italy, Japan, Lithuania, Latvia, Norway, Poland, Slovakia, Spain, United States

Pre-assignment

Screening details:

Participant disposition was generally well balanced between the treatment arms. 504 participants were enrolled with 289 participants failed screening or were not assigned to treatment. A total of 215 participants were randomized to 5 treatment arms (44 to eliapixant, 44 to eliapixant, 43 to eliapixant, 43 to placebo, and 41 to Elagolix).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Eliapixant (BAY1817080) 25 mg

Primary: Absolute change in mean worst EAPP from baseline to week 12 - pPPS

End point title	Absolute change in mean worst EAPP from baseline to week 12 - pPPS ^{[1][2]}
End point description:	The worst EAPP was measured daily on the 0-10 Numerical Rating Scale (NRS) by item 1 of the Endometriosis Symptom Diary (ESD). In question 1, participants were asked to rate the pain in the target area during the past 24 hours, where 0= no pain and 10= worst imaginable pain and responses were recorded in ESD. The absolute change in mean worst EAPP was from baseline (last 28 days before the first intake of study drug) to end of intervention (last 28 days ending with the last intake of study drug planned on Day 84 [+3]). The time frame of 28 days captures a menstrual cycle on average.
End point type	Primary
End point timeframe:	from baseline to week 12

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis is given as an add-on endpoint to the primary endpoint, because the statistics on changes between different time points within one arm cannot be correctly displayed in the "Statistical Analysis Section", due to database constraints.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Active comparator Elagolix not part of Primary per protocol set (pPPS)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Only TEAEs, that were arising or worsening after the start of study drug administration until 14 days after the last study medication intake with an average of 14 weeks, are reported in below adverse events table.

Adverse event reporting additional description:

While for the all-cause deaths that occurred at any time during the study before the last contact, up to 285 days are reported.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Eliapixant (BAY1817080) 25 mg
-----------------------	-------------------------------

Reporting group description:

25 mg Eliapixant twice daily for 12 weeks

Reporting group title	Eliapixant (BAY1817080) 75 mg
-----------------------	-------------------------------

Reporting group description:

75 mg Eliapixant twice daily for 12 weeks

Reporting group title	150 mg Elagolix
-----------------------	-----------------

Reporting group description:

150 mg Elagolix once daily for 12 weeks

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Placebo for 12 weeks

Reporting group title	Eliapixant (BAY1817080) 150 mg
-----------------------	--------------------------------

Reporting group description:

75 mg Eliapixant twice daily for 12 weeks

Serious adverse events	Eliapixant (BAY1817080) 25 mg	Eliapixant (BAY1817080) 75 mg	150 mg Elagolix
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 39 (0.00%)	2 / 38 (5.26%)	1 / 38 (2.63%)
number of deaths (all causes)	0	0	0
number of deaths resulting from adverse events	0	0	0
Investigations

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 June 2021	<ul style="list-style-type: none">Adapted Visit schedule to allow for testing of liver parameters every 2 weeks during the treatment period as precautionary measureAdaptation of exclusion criterion 7 with addition of an example for extremely low body weight to support the investigator decisions on participant selection.
27 January 2022	<ul style="list-style-type: none">Adapted Visit schedule to allow for a comprehensive safety follow up of study participants exposed to eliapixant.Update on risk of potential changes in liver function laboratory parameters with eliapixant use.Updated benefit/risk assessment to indicate that the benefit-risk ratio for this study was no longer considered to be positive and a clinical hold with an immediate stop of treatment and enrolment was decided.Indicating that abnormal laboratory results meeting the criteria of transaminases (alanine aminotransferase [ALT] and/or aspartate aminotransferase [AST]) >8x ULN or >3x ULN with total bilirubin >2x ULN should be reported as adverse events of special interest to ensure a comprehensive safety follow up of exposed study participantsLiver imaging was added to the close observation assessments, and hepatitis C virus Ribonucleic acid (HCV-RNA) was added to the parameters for samples to be analyzed for initial close liver observation to ensure a comprehensive safety follow up of exposed study participants

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
27 January 2022	study was stopped due to safety reasons.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was prematurely terminated due to safety reasons.

Notes:
