

## Clinical trial results:

### A Phase II Multi-Center, Randomized, Double-Blind, 24-Week, Parallel Group, Placebo-Controlled Study to Investigate the Efficacy and Safety of Balovaptan (RO5285119) in Children and Adolescents Age 5-17 With Autism Spectrum Disorder (ASD)

#### Summary

EudraCT number	2020-003173-22
Trial protocol	Outside EU/EEA
Global end of trial date	30 June 2020

#### Results information

Result version number	v1 (current)
This version publication date	23 December 2020
First version publication date	23 December 2020

#### Trial information

##### Trial identification

Sponsor protocol code	BP30153
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02901431
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001918-PIP01-15
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 June 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 June 2020
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study is to evaluate the efficacy of 24-week treatment with balovaptan (RO5285119) 10 mg equivalent compared to placebo as measured by the change from baseline on the Vineland™-II Adaptive Behavior Scales, second edition (Vineland™-II) Two Domain Composite (2DC) (average of Communication and Socialization domains).

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 339
Worldwide total number of subjects	339
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	127
Adolescents (12-17 years)	212
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 339 participants were enrolled from 44 sites in the United States.

### Pre-assignment

Screening details:

For the Main Study Part and Open Extension Study Part, treatment groups were categorized based on the tertiles of individual participants PK exposure at Week 12. To allow clear analysis by exposure tertiles, participants with dose adjustment were excluded from the analysis by tertiles.

### Period 1

Period 1 title	PK Part and Main Study Part
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	PK Part - Placebo

Arm description:

Participants received a matching placebo orally. Approximate treatment duration was up to 8 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received a matching placebo orally. Approximate treatment duration was up to 8 weeks.

<b>Arm title</b>	PK Part - Balovaptan (RO5285119) 4 mg/d equivalent
------------------	--

Arm description:

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Balovaptan
Investigational medicinal product code	
Other name	RO5285119
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.

<b>Arm title</b>	PK Part - Balovaptan (RO5285119) 10 mg/d equivalent
------------------	---

Arm description:

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Balovaptan
Investigational medicinal product code	
Other name	RO5285119
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

**Dosage and administration details:**

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.

<b>Arm title</b>	Placebo
------------------	---------

**Arm description:**

Participants received a matching placebo orally. Approximate treatment duration was up to 24 weeks in Main Study Part.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

**Dosage and administration details:**

Participants received a matching placebo orally. Approximate treatment duration was up to 24 weeks in Main Study Part.

<b>Arm title</b>	Low Exposure Tertile
------------------	----------------------

**Arm description:**

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

Arm type	Experimental
Investigational medicinal product name	Balovaptan
Investigational medicinal product code	
Other name	RO5285119
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

**Dosage and administration details:**

Treatment groups were categorized based on the tertiles of individual participant's PK exposure at week 12. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

<b>Arm title</b>	Medium Exposure Tertile
------------------	-------------------------

**Arm description:**

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

Arm type	Experimental
Investigational medicinal product name	Balovaptan
Investigational medicinal product code	
Other name	RO5285119
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

**Dosage and administration details:**

Treatment groups were categorized based on the tertiles of individual participant's PK exposure at week 12. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

<b>Arm title</b>	High Exposure Tertile
------------------	-----------------------

Arm description:

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

Arm type	Experimental
Investigational medicinal product name	Balovaptan
Investigational medicinal product code	
Other name	RO5285119
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

Dosage and administration details:

Treatment groups were categorized based on the tertiles of individual participant's PK exposure at week 12. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

<b>Arm title</b>	Dose-Adjusters
------------------	----------------

Arm description:

Participants with dose adjustment who were excluded from the analysis by tertiles. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

Arm type	Experimental
Investigational medicinal product name	Balovaptan
Investigational medicinal product code	
Other name	RO5285119
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

Dosage and administration details:

Participants with dose adjustment who were excluded from the analysis by tertiles. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

## Baseline characteristics

### Reporting groups

Reporting group title	PK Part - Placebo
Reporting group description: Participants received a matching placebo orally. Approximate treatment duration was up to 8 weeks.	
Reporting group title	PK Part - Balovaptan (RO5285119) 4 mg/d equivalent
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.	
Reporting group title	PK Part - Balovaptan (RO5285119) 10 mg/d equivalent
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.	
Reporting group title	Placebo
Reporting group description: Participants received a matching placebo orally. Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	Low Exposure Tertile
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	Medium Exposure Tertile
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	High Exposure Tertile
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	Dose-Adjusters
Reporting group description: Participants with dose adjustment who were excluded from the analysis by tertiles. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	

Reporting group values	PK Part - Placebo	PK Part - Balovaptan (RO5285119) 4 mg/d equivalent	PK Part - Balovaptan (RO5285119) 10 mg/d equivalent
Number of subjects	12	11	15
Age categorical Units: Subjects			

Age Continuous			
Participants in the PK part and Main Study Part.			
Units: years			
arithmetic mean	8.9	9.9	10.4
standard deviation	± 3.8	± 3.3	± 3.5

Sex: Female, Male			
The overall total numbers of baseline participants is lower than the sum of the groups because 7 re-starters are counted in both the PK part and Main Study Part of the study.			
Units: Participants			
Female	3	1	4
Male	9	10	11

Reporting group values	Placebo	Low Exposure Tertile	Medium Exposure Tertile
Number of subjects	112	57	66
Age categorical			
Units: Subjects			

Age Continuous			
Participants in the PK part and Main Study Part.			
Units: years			
arithmetic mean	12.5	13.3	12.6
standard deviation	± 3.0	± 2.3	± 3.0
Sex: Female, Male			
The overall total numbers of baseline participants is lower than the sum of the groups because 7 re-starters are counted in both the PK part and Main Study Part of the study.			
Units: Participants			
Female	17	9	8
Male	95	48	58

Reporting group values	High Exposure Tertile	Dose-Adjusters	Total
Number of subjects	66	7	346
Age categorical			
Units: Subjects			

Age Continuous			
Participants in the PK part and Main Study Part.			
Units: years			
arithmetic mean	11.8	12.6	
standard deviation	± 3.3	± 2.1	-
Sex: Female, Male			
The overall total numbers of baseline participants is lower than the sum of the groups because 7 re-starters are counted in both the PK part and Main Study Part of the study.			
Units: Participants			
Female	11	0	53
Male	55	7	293

## End points

### End points reporting groups

Reporting group title	PK Part - Placebo
Reporting group description: Participants received a matching placebo orally. Approximate treatment duration was up to 8 weeks.	
Reporting group title	PK Part - Balovaptan (RO5285119) 4 mg/d equivalent
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.	
Reporting group title	PK Part - Balovaptan (RO5285119) 10 mg/d equivalent
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.	
Reporting group title	Placebo
Reporting group description: Participants received a matching placebo orally. Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	Low Exposure Tertile
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	Medium Exposure Tertile
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	High Exposure Tertile
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	Dose-Adjusters
Reporting group description: Participants with dose adjustment who were excluded from the analysis by tertiles. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.	
Reporting group title	Placebo
Reporting group description: Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.	
Reporting group title	Low Exposure Tertile
Reporting group description: Tertiles were used as derived from the main study part at Week 12. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.	
Reporting group title	Medium Exposure Tertile
Reporting group description: Tertiles were used as derived from the main study part at Week 12. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension	

Part.

Reporting group title	High Exposure Tertile
-----------------------	-----------------------

Reporting group description:

Tertiles were used as derived from the main study part at Week 12. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.

Reporting group title	Dose-Adjusters
-----------------------	----------------

Reporting group description:

Participants with dose adjustment who were excluded from the analysis by tertiles. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.

Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants in the Main Study Part in the Medium Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks.

Subject analysis set title	Main Study Part, High Exposure Tertile
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants in the Main Study Part in the High Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks.

Subject analysis set title	Main Study Part - All Treated
Subject analysis set type	Intention-to-treat

Subject analysis set description:

All participants in the Main Study Part received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). This group includes participants from the low, medium, and high exposure tertiles, as well as the Dose-Adjusters. Approximate treatment duration was up to 24 weeks.

Subject analysis set title	Open Label Extension Part, Low Exposure Tertile
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants in the Open Label Extension Part of the study in the Low Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks.

Subject analysis set title	Open Label Extension Part, Medium Exposure Tertile
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants in the Open Label Extension Part of the study in the Medium Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.

Subject analysis set title	Open Label Extension Part, High Exposure Tertile
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants in the Open Label Extension Part of the study in the High Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks.

Subject analysis set title	Open Label Extension Part, All Treated

**Primary: Change From Baseline in Vineland™-II Adaptive Behavior Scale Two Domain Composite (2DC) Score at Week 24 for Balovaptan (R05285119) 10 mg Equivalent Compared to Placebo**

End point title	Change From Baseline in Vineland™-II Adaptive Behavior Scale Two Domain Composite (2DC) Score at Week 24 for Balovaptan (R05285119) 10 mg Equivalent Compared to Placebo
-----------------	--

End point description:

Vineland™-II Adaptive Behavior Scales 2-Domain Composite (2DC) Score is defined as mean of the Communication domain standard score & Socialization domain standard score. If any of the 2 individual domain standard scores is missing 2DC score is not computed. Vineland™-II is an instrument that measures communication, daily living skills, socialization, motor skills and maladaptive behavior of individuals with developmental disabilities. Survey Interview Form will be administered to a subject's reliable caregiver in this study, during which the rater or clinician will ask to the caregiver open ended questions relating to the subject's activities and behavior. Standardized scores on the Adaptive behavior composite range from 20-160 with higher scores indicating better functioning. Mixed model with repeated measures (MMRM) was used for analysis with assessments at baseline, Week 12 and Week 24.

# **(PedsQL) v4.0 Generic Core Scale after 12 Weeks and 24 Weeks of Treatment for Balovaptan (R05285119) 10 mg Equivalent Compared to Placebo**

End point title	Change from Baseline in Patient-Reported Pediatric Quality of Life (PedsQL) v4.0 Generic Core Scale after 12 Weeks and 24 Weeks of Treatment for Balovaptan (R05285119) 10 mg Equivalent Compared to Placebo
-----------------	--

## End point description:

The Pediatric Quality of Life Inventory PedsQL™4.0 Generic Core Scale assessment consists of a 23 item questionnaire encompassing 4 core scale domains: Physical Functioning (8 items); Emotional Functioning (5 items); Social Functioning (5 items); and School Functioning (5 items). For children aged 8 years and above, the PedsQL items are scored on a 5 point Likert-type response scale (0=never a problem; 1=almost never a problem; 2=sometimes a problem; 3=often a problem; and 4=almost always a problem). For children aged 5-7 years, scoring is based on a three-point scale (0=Not at all, 2=Sometimes, 4=A lot). Once scored, items will be reverse scored and linearly transformed to a 0-100 scale (0=100, 1=75, 2=50, 3=25, 4=0), so that higher scores indicate better health-related quality of life.

-----------------	---

End point description:

The Vineland-II is an instrument that measures communication, daily living skills, socialization, motor skills (only in children up to 6 years) and maladaptive (not assessed in this study) behavior of individuals with developmental disabilities. The Survey Interview Form (i.e., semi -structured interview) will be administered to a subject's reliable caregiver in this study, during which the rater or clinician will ask to the caregiver open ended questions relating to the subject's activities and behavior. Domain scores will be obtained for the individual domains of Socialization, Communication, Daily Living Skills, and motor skills (up to 6 years only) and used to calculate the Vineland-II Adaptive Behavior Composite score. Standardized scores on the Adaptive behavior composite range from 20-160 with higher scores indicating better functioning.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the first study drug to the data cutoff date: 30 June 2020 (up to 43 months)

Adverse event reporting additional description:

Treatment groups were categorized based on the tertiles of individual participant's PK exposure at Week 12. To allow clear analysis by exposure tertiles, dose adjusters were excluded from the analysis by tertiles. Dose-Adjusters are reported as a separate group.

Assessment type	Systematic

### Reporting groups

Reporting group title	PK Part - Placebo
-----------------------	-------------------

Reporting group description:

Participants in the PK Part of the study who received a matching placebo orally. Approximate treatment duration was up to 8 weeks.

Reporting group title	PK Part - Balovaptan (RO5285119) 4 mg/d equivalent
-----------------------	--

Reporting group description:

Participants in the PK Part of the study who received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.

Reporting group title	PK Part - Balovaptan (RO5285119) 10 mg/d equivalent
-----------------------	---

Reporting group description:

Participants in the PK Part of the study who received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 8 weeks.

Reporting group title	Main Study Part - Placebo
-----------------------	---------------------------

Reporting group description:

Participants in the Main Study Part received a matching placebo orally. Approximate treatment duration was up to 24 weeks.

Reporting group title	Main Study Part - Low Exposure Tertile
-----------------------	--

Reporting group description:

Participants in the Main Study Part in the Low Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks.

Reporting group title	Main Study Part - Medium Exposure Tertile
-----------------------	---

Reporting group description:

Participants in the Main Study Part in the Medium Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks.

Reporting group title	Main Study Part - High Exposure Tertile
-----------------------	---

Reporting group description:

Participants in the Main Study Part in the High Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks.

Reporting group title	Main Study Part - Dose-Adjusters
-----------------------	----------------------------------

Reporting group description:

Participants with dose adjustment who were excluded from the analysis by tertiles. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 4 or 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 24 weeks in Main Study Part.

Reporting group title	Open Label Extension Part - Placebo
-----------------------	-------------------------------------

Reporting group description:

Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.

Reporting group title	Open Label Extension Part - Low Exposure Tertile
-----------------------	--

Reporting group description:

Participants in the Open Label Extension Part of the study in the Low Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks.

Reporting group title	Open Label Extension Part - Medium Exposure Tertile
-----------------------	---

Reporting group description:

Participants in the Open Label Extension Part of the study in the Medium Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.

Reporting group title	Open Label Extension Part - High Exposure Tertile
-----------------------	---

Reporting group description:

Participants in the Open Label Extension Part of the study in the High Exposure Tertile received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks.

Reporting group title	Open Label Extension Part - Dose-Adjusters
-----------------------	--

Reporting group description:

Participants with dose adjustment who were excluded from the analysis by tertiles. Participants received age-adjusted total daily oral dose approximately equivalent to the adult dose of 10 milligrams per day (mg/d) of balovaptan (RO5285119). Approximate treatment duration was up to 52 weeks in Open Label Extension Part.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 August 2016	Protocol was amended to include age range change to 13-17 years for adolescents and 5-12 years for children. The PK schedule was revised so that the visit with the most intense PK sampling was moved from Week 1 to Week 2. This was to ensure that PK assessments were taken within the first cohorts of 24 adolescents and 24 children at steady state for all major metabolites.
30 January 2017	Protocol was amended to include participants who were obliged to stop dosing on or before Week 8, due to lack of sufficient data to inform IMC/ SOC decision on final dose, were allowed to re-start in the main study.
19 May 2017	Protocol was amended to include a change in the exclusion criterion for body mass index (BMI). BMI at or above the 95th percentile for the same age and sex was considered to be safe. The 99th percentile was used instead.
29 March 2018	Protocol was amended to include updated text to specify that the primary endpoint will be assessed based on the change from baseline on the Vineland™-II Adaptive Behavior Scales, second edition (Vineland™-II) Two Domain Composite (2DC) instead of Vineland™-II Adaptive Behavior Scales, second edition (Vineland™-II) Composite standard score. The following secondary objectives were added: Proportion of participants with $\geq 6$ -point improvement in the Vineland™-II 2DC score to evaluate clinically meaningful response; Patient-reported Pediatric Quality of Life (PedsQL) v4.0 Generic Core Scale after 12 weeks and 24 weeks of treatment; Evaluate safety and tolerability of up to 76 weeks of treatment with balovaptan. The secondary objective was changed from "Change from baseline on the Vineland™-II Composite standard score after 12 weeks and 24 weeks of treatment" to "Change from baseline on the Vineland™-II 2DC score after 12 weeks and 24 weeks of treatment". An Open Label Extension was added. The total duration of the study was updated from 39 weeks to 91 weeks and the end of study was updated from 31 weeks to 83 weeks.
19 December 2018	Protocol was amended to include study design change to a single dose (10 mg equivalent balovaptan) compared with Placebo in accordance to a randomization ratio of 1:1 of balovaptan 10 mg equivalent: Placebo. Adolescent participants who had been discontinued because of lack of dose confirmation (per protocol prior to Week 8) were to be replaced in the study. The total sample size of the study was increased to 340 participants. The initial starting dose (main study) was changed following review of available safety and PK data from the study. A table was added to outline updated starting doses for adolescents and children, aged 8 to 17 years.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Limited data collected in OLE part because study was terminated early after primary analysis.

Notes:
