

Clinical trial results:

A Placebo-Controlled, Double-Blind, Randomized, Parallel Group Pilot Study to Evaluate the Efficacy of Dextromethorphan Hydrobromide on Acute Cough in a Pediatric Population

Summary

EudraCT number	2020-003216-28
Trial protocol	Outside EU/EEA
Global end of trial date	19 March 2020

Results information

Result version number	v1 (current)
This version publication date	30 September 2020
First version publication date	30 September 2020

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 June 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	19 March 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The objective of this pilot study was to evaluate the endpoints and analyses that might be most appropriate to evaluate the efficacy of dextromethorphan hydrobromide (DXM HBr) 15 milligram (mg) per 10 millilitre (mL) versus placebo in children aged 6 to 11 years in a future study.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 February 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	United States: 131
Worldwide total number of subjects	131
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	131
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study was conducted in the United States from 25 February 2016 to 19 March 2020.

Pre-assignment

Screening details:

142 subjects were enrolled in a 2 hour run-in period, where they received 10 mL of non-medicinal liquid oral confection for once, and fitted with cough counting device VitaloJAK™. Subjects who completed run-in period and qualified, were randomised to either dextromethorphan hydrobromide or placebo in a 4-day treatment period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Dextromethorphan Hydrobromide

Arm description:

Subjects were randomised to receive 9 doses of DXM HBr (15 mg/10 mL) over the course of 4 day study treatment and were fitted with the cough recording device VitaloJAK™ for the first 24 hours of treatment. On Day 1, subjects received a single 10 mL oral dose of DXM HBr syrup each in afternoon and evening. On Day 2 and 3, subjects received a single 10 mL oral dose of DXM HBr syrup each in morning, afternoon and evening. On Day 4, subjects received a single 10 mL oral dose of DXM HBr syrup in morning. Subjects were followed up for 14 days after last dose of study medication.

Arm type	Experimental
Investigational medicinal product name	Dextromethorphan Hydrobromide
Investigational medicinal product code	
Other name	PF-02450388
Pharmaceutical forms	Syrup
Routes of administration	Oral use

Dosage and administration details:

On Day 1, subjects received a single 10 mL oral dose of DXM HBr syrup each in afternoon and evening. On Day 2 and 3, subjects received a single 10 mL oral dose of DXM HBr syrup each in morning, afternoon and evening. On Day 4, subjects received a single 10 mL oral dose of DXM HBr syrup in morning.

Arm title	Placebo
------------------	---------

Arm description:

Subjects were randomised to receive 9 doses of placebo matched to 15 mg/10 mL DXM HBr over the course of 4 day study treatment and were fitted with the cough recording device VitaloJAK™ for the first 24 hours of treatment. On Day 1, subjects received a single 10 mL oral dose of placebo syrup each in afternoon and evening. On Day 2 and 3, subjects received a single 10 mL oral dose of placebo syrup each in morning, afternoon and evening. On Day 4, subjects received a single 10 mL oral dose of placebo syrup in morning. Subjects were followed up for 14 days after last dose of study medication.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Syrup
Routes of administration	Oral use

Dosage and administration details:

On Day 1, subjects received a single 10 mL oral dose of placebo syrup matched to DXM HBr each in afternoon and evening. On Day 2 and 3, subjects received a single 10 mL oral dose of placebo syrup each in morning, afternoon and evening. On Day 4, subjects received a single 10 mL oral dose of placebo syrup in morning.

Subjects were followed up for 14 days after last dose of study medication.	

Primary: Mean of Total Cough Counts: Over 24 Hours Post-First Dose on Day 1

End point title	Mean of Total Cough Counts: Over 24 Hours Post-First Dose on Day 1
End point description:	
Total cough count was collected by the cough recording device VitaloJAKTM in an ambulatory setting. The VitaloJAKTM device recorded continuous digital audio obtained through both a lapel microphone clipped to the subject's clothing at the neck or upper chest level, and a chest wall sensor attached to the subject's chest at the top of the sternum. Data were captured on a data card and the vitalograph analyst evaluated cough counts. Full analysis set included all subjects who were randomised, took Dose 1, had a valid baseline cough count assessment, and provided any post-dosing efficacy data.	
End point type	Primary
End point timeframe:	
Within 24 hours post-first dose on Day 1	

End point values	Dextromethorphan Hydrobromide	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	67	61		
Units: Cough counts				
arithmetic mean (standard deviation)	457.1 (± 367.21)	676.8 (± 814.33)		

Statistical analyses

Statistical analysis title	Dextromethorphan Hydrobromide vs Placebo
Statistical analysis description:	
Estimated rate ratio, and corresponding 95% confidence interval (CI) for DXM HBr versus placebo was obtained from negative binomial model with treatment, study site (pooled), age group, and log-	

transformed baseline average cough count per hour as factors, with logarithm of the time over which the cough count was evaluated as the offset parameter. Rate ratio refers to, ratio of rate of cough counts per 24 hours for DXM HBr to placebo.

Comparison groups	Dextromethorphan Hydrobromide v Placebo
Number of subjects included in analysis	128
Analysis specification	Pre-specified
Analysis type	superiority
P-value	≤ 0.0449 ^[1]
Method	Negative Binomial Regression
Parameter estimate	Ratio of rates
Point estimate	0.7899
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.6273
upper limit	0.9947
Variability estimate	Standard error of the mean
Dispersion value	0.0929

Notes:

[1] - P-Value ≤ 0.05 level was considered significantly better and P-Value lying between $0.05 < p \leq 0.1$ level was considered marginally significantly better.

Secondary: Mean of Total Cough Counts: Between Dose 1 to Dose 2 on Day 1

Statistical analysis description:

ANOVA model contained treatment, study site (pooled), the corresponding morning baseline cough severity by subject, and age group included in the model.

Comparison groups	Dextromethorphan Hydrobromide v Placebo
Number of subjects included in analysis	128
Analysis specification	Pre-specified
Analysis type	superiority
P-value	≤ 0.0049 [8]
Method	ANOVA
Parameter estimate	Difference in least squares mean
Point estimate	-0.3128
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.5299
upper limit	-0.0956
Variability estimate	Standard error of the mean
Dispersion value	0.1104

Notes:

[8] - P-Value ≤0.05 level was considered significantly better and P-Value lying between 0.05<p≤0.1 level was considered marginally significantly better.

Other pre-specified: Change From Baseline in Impact of Cough on Sleep at Day 2, 3, and 4

End point title	Change From Baseline in Impact of Cough on Sleep at Day 2, 3, and 4
-----------------	---

End point description:

Subjects on specified time points were asked to respond to "last night in bed, how much did your cough keep you awake", on a 5-point scale: 0= not at all, 1= a tiny bit, 2= a little, 3= some and 4= a lot. Higher scores indicated worse impact of cough on sleep. Full analysis set included all subjects who were

randomised, took Dose 1, had a valid baseline cough count assessment, and provided any post-dosing efficacy data. Here 'n' signifies number of subjects evaluable for specified time points.

End point type	Other pre-specified
End point timeframe:	
Baseline (morning screening visit on Day 1), Within 30 minutes of waking and before morning dose on Days 2, 3, and 4	

End point values	Dextromethorphan Hydrobromide	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	67	61		
Units: Units on a scale				
arithmetic mean (standard deviation)				
Baseline (n= 67, 61)	2.8 (± 1.15)	3.0 (± 1.19)		
Change at Day 2 (n= 66, 61)	-0.8 (± 1.56)	-0.7 (± 1.45)		
Change at Day 3 (n= 66, 60)	-1.3 (± 1.59)	-1.4 (± 1.67)		
Change at Day 4 (n= 66, 60)	-1.8 (± 1.57)	-1.9 (± 1.74)		

Statistical analyses

Statistical analysis title	Dextromethorphan Hydrobromide vs Placebo
Statistical analysis description:	
ANOVA model contained treatment, study site (pooled), the corresponding morning baseline impact on sleep by subject, and age group included in the model.	
Comparison groups	Dextromethorphan Hydrobromide v Placebo
Number of subjects included in analysis	128
Analysis specification	Pre-specified
Analysis type	superiority
P-value	≤ 0.2679 [9]
Method	ANOVA
Parameter estimate	Difference in least squares mean
Point estimate	-0.1483
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.4112
upper limit	0.1146
Variability estimate	Standard error of the mean
Dispersion value	0.1337

Notes:

[9] - P-Value ≤0.05 level was considered significantly better and P-Value lying between 0.05<p≤0.1 level was considered marginally significantly better.

Other pre-specified: Change From Baseline in Afternoon Cough Frequency at Day 2, 3, and 4

End point title	Change From Baseline in Afternoon Cough Frequency at Day 2, 3, and 4
-----------------	--

End point description:

Subjects on specified time points were asked to respond to "how much have you been coughing this afternoon" on a 5-point scale: 0= not at all, 1= a tiny bit, 2= a little, 3= some and 4= a lot. Higher scores indicated higher frequency of cough in afternoon time. Full analysis set included all subjects who were randomised, took Dose 1, had a valid baseline cough count assessment, and provided any post-dosing efficacy data. Here 'n' signifies number of subjects evaluable for specified time points.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Baseline (afternoon visit on Day 1 before first dose), Before the afternoon dose on Days 2, and 3, Afternoon of Day 4

End point values	Dextromethorphan Hydrobromide	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	67	61		
Units: Units on a scale				
arithmetic mean (standard deviation)				
Baseline (n= 67, 61)	3.2 (± 0.80)	3.4 (± 0.73)		
Change at Day 2 (n= 66, 61)	-0.7 (± 1.25)	-0.6 (± 1.06)		
Change at Day 3 (n= 66, 60)	-1.5 (± 1.30)	-1.4 (± 1.27)		
Change at Day 4 (n= 63, 58)	-1.9 (± 1.22)	-1.8 (± 1.41)		

Statistical analyses

Statistical analysis title	Dextromethorphan Hydrobromide vs Placebo

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Day 1 up to 14 days after last dose of study medication (up to 18 days)

Adverse event reporting additional description:

Same event may appear as Adverse Event (AE) and Serious Adverse Events (SAE), what is presented are distinct events. Event may be categorised as serious in 1 subject and as non-serious in another subject or 1 subject may have experienced both serious and non-serious event during study. Evaluated on all subjects who received the study drug.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects were randomised to receive 9 doses of placebo matched to 15 mg/10 mL DXM HBr over the course of 4 day study treatment and were fitted with the cough recording device VitaloJAK™ for the first 24 hours of treatment. On Day 1, subjects received a single 10 mL oral dose of placebo syrup each in afternoon and evening. On Day 2 and 3, subjects received a single 10 mL oral dose of placebo syrup each in morning, afternoon and evening. On Day 4, subjects received a single 10 mL oral dose of placebo syrup in morning. Subjects were followed up for 14 days after last dose of study medication.

Reporting group title	Dextromethorphan Hydrobromide
