

Clinical trial results:

An Interventional Open-Label Multicenter Phase IV Study to Evaluate the Impact of Emicizumab on Health-Related Quality of Life, Physical Activity, and Joint Health in Patients With Severe Hemophilia A Without FVIII Inhibitors in the Nordic Countries

Summary

EudraCT number	2020-003256-32
Trial protocol	SE NO FI DK
Global end of trial date	08 July 2024

Results information

Result version number	v1 (current)
This version publication date	01 January 2025
First version publication date	01 January 2025

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 July 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 March 2024
Global end of trial reached?	Yes
Global end of trial date	08 July 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The study aims to evaluate the impact of emicizumab on aspects of health-related quality of life (HRQoL) in subjects with severe hemophilia A without factor VIII (FVIII) inhibitors.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 April 2022
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 6
Country: Number of subjects enrolled	Finland: 5
Country: Number of subjects enrolled	Norway: 6
Country: Number of subjects enrolled	Sweden: 11
Worldwide total number of subjects	28
EEA total number of subjects	28

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	12
Adults (18-64 years)	16

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects who completed at least 24 weeks of observation period in the non-interventional study (NIS) MO42590 took part in this study in Denmark, Finland, Norway, and Sweden from 04 April 2022 to 08 July 2024.

Pre-assignment

Screening details:

A total of 28 male adolescent and adult subjects with severe hemophilia A enrolled in this study to receive emicizumab.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Emicizumab
-----------	------------

Arm description:

Subjects received emicizumab, as subcutaneous (SC) injection, at a loading dose of 3 milligrams/kilograms (mg/kg), every week (QW) for 4 weeks followed by a maintenance dose of 1.5 mg/kg, QW or 3 mg/kg, every 2 weeks (Q2W) or 6 mg/kg, every 4 weeks (Q4W) for 44 weeks or until discontinuation from the study for any reason.

Arm type	Experimental
Investigational medicinal product name	Emicizumab
Investigational medicinal product code	RO5534262
Other name	Hemlibra, RG6013, ACE910
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Emicizumab, 3mg/kg, QW, as SC injection for 4 weeks followed by a maintenance dose of 1.5 mg/kg, QW or 3 mg/kg, Q2W, or 6 mg/kg (Q4W) for 44 weeks or until discontinuation from the study for any reason.

Number of subjects in period 1	Emicizumab
Started	28
Completed	26
Not completed	2
Physician decision	2

Baseline characteristics

Reporting groups

Reporting group title	Emicizumab
-----------------------	------------

Reporting group description:

Subjects received emicizumab, as subcutaneous (SC) injection, at a loading dose of 3 milligrams/kilograms (mg/kg), every week (QW) for 4 weeks followed by a maintenance dose of 1.5 mg/kg, QW or 3 mg/kg , every 2 weeks (Q2W) or 6 mg/kg, every 4 weeks (Q4W) for 44 weeks or until discontinuation from the study for any reason.

Reporting group values	Emicizumab	Total	
Number of subjects	28	28	
Age Categorical Units: Subjects			
Age Continuous Units: years arithmetic mean standard deviation	28.4 ± 14.7	-	
Gender Categorical Units: Subjects			
Female	0	0	
Male	28	28	

End points

End points reporting groups

Reporting group title	Emicizumab
Reporting group description: Subjects received emicizumab, as subcutaneous (SC) injection, at a loading dose of 3 milligrams/kilograms (mg/kg), every week (QW) for 4 weeks followed by a maintenance dose of 1.5 mg/kg, QW or 3 mg/kg, every 2 weeks (Q2W) or 6 mg/kg, every 4 weeks (Q4W) for 44 weeks or until discontinuation from the study for any reason.	
Subject analysis set title	Emicizumab: Adults
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects aged ≥ 18 years received emicizumab, SC injection, at a loading dose of 3 mg/kg, QW for 4 weeks followed by a maintenance dose of 1.5 mg/kg, QW or 3 mg/kg, Q2W or 6 mg/kg, Q4W for 44 weeks or until discontinuation from the study for any reason.	
Subject analysis set title	Emicizumab: Adolescents
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects aged 12- <18 years received emicizumab, SC injection, at a loading dose of 3 mg/kg, QW for 4 weeks followed by a maintenance dose of 1.5 mg/kg, QW or 3 mg/kg, Q2W or 6 mg/kg, Q4W for 44 weeks or until discontinuation from the study for any reason.	
Subject analysis set title	FVIII Prophylaxis
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received FVIII prophylaxis and participated in the NIS MO42590 for up to 24 weeks.	

Primary: Change from Baseline in Risk Perception & Restrictions Experienced in Recreational Activities, Preoccupation With Disease, Impact of Treatment Burden on HRQoL & Pain Severity Assessed by Comprehensive Assessment Tool of Challenges in Hemophilia (CATCH) Scores

End point title	Change from Baseline in Risk Perception & Restrictions Experienced in Recreational Activities, Preoccupation With Disease, Impact of Treatment Burden on HRQoL & Pain Severity Assessed by Comprehensive Assessment Tool of Challenges in Hemophilia (CATCH) Scores ^[1]
End point description: CATCH assesses impact of hemophilia & its treatment on pediatric (8–17 years) & adult (≥ 18 years) subjects. Each version has 7 domains: daily activity risk perception (RP) & impact, social activity RP & impact, recreational activity (RA) RP & impact, work impact/school impact, preoccupation, treatment burden, & pain. Each domain has multiple items based on version used & is scored on ordinal scales with 11-point numeric rating scale for pain. Raw scores are linearly transformed on a scale of 0-100. Higher scores=higher perceived risk, higher impact & greater perceived burden of hemophilia. For adolescents higher score in treatment burden domain=lower perceived burden of hemophilia. Baseline (BL) = Week 24 assessment from NIS MO42590. Safety population. Number analysed=subjects with data available for analyses. n=subjects with data available for analyses at specified timepoints. 9999=No subjects were analysed at this timepoint.	
End point type	Primary
End point timeframe: Baseline, Week 25 and Week 49	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: All analysis was descriptive only and no formal hypothesis testing was done.

End point values	Emicizumab: Adults	Emicizumab: Adolescents

Secondary: Level of PA Assessed by Daily Active Minutes, Moderate to Vigorous Physical Activity (MVPA), and Sedentary Time

End point title	Level of PA Assessed by Daily Active Minutes, Moderate to Vigorous Physical Activity (MVPA), and Sedentary Time
-----------------	---

End point description:

Level of PA was measured using a Fitbit model Charge 4 and their standard algorithms for subjects aged 13 years and older (at Week 9 of this study). Subjects wore the activity tracker while they were awake every day on the same wrist. Active minutes identify the possibility of increased activity intensity. The subject must be active for at least ten minutes to earn active minutes. Intensity refers to the rate at which the activity was being performed/ the magnitude of the effort required to perform an activity/ exercise. MVPA was defined as per Fitbit default categorization. Sedentary time was calculated as time when there was no movement. Baseline was defined as Week 9-16 assessment period of this study. Safety population included all subjects who received at least one dose of emicizumab. Number analysed included subjects who wore the device for at least 7 hours per day and with at least 100 steps recorded, on at least 21 days.

Secondary: Time and Intensity Level of PA Assessed Using International Physical Activity Questionnaire-Short Form (IPAQ-SF) Score Every Three Months

End point title	Time and Intensity Level of PA Assessed Using International Physical Activity Questionnaire-Short Form (IPAQ-SF) Score Every Three Months
-----------------	---

End point description:

The IPAQ-SF measured overall PA in last 7 days of adolescent subjects aged ≥ 15 years. It was completed via electronic patient-reported outcome (ePRO) in a smartphone application (app). The IPAQ comprises a set of 4 questionnaires to assess 3 specific types of activity undertaken in 4 domains (leisure time physical activity, domestic and gardening (yard) activities, work-related physical activity, transport-related physical activity). Specific types of activity assessed were walking, moderate-intensity & vigorous-intensity activities. The items in IPAQ-SF questionnaire were structured to provide separate scores on walking, moderate-intensity & vigorous-intensity activity, expressed in MET-minutes/week. Higher scores=better PA. Week1=Baseline assessment in MO42245. Safety population=subjects who received at least 1 dose of emicizumab. Number analysed=subjects aged 15 years & older with data available for analysis. n=subjects available with data for analysis at that specified timepoint.

Secondary: Joint Health Assessed Using Hemophilia Early Arthropathy Detection With Ultrasound (HEAD-US) Score

End point title	Joint Health Assessed Using Hemophilia Early Arthropathy Detection With Ultrasound (HEAD-US) Score
End point description:	
The HEAD-US was a method for early detection of hemophilic arthropathy with ultrasound. HEAD-US assesses the following 3 domains for 6 joints (knees, elbows, and ankles): hypertrophic synovium, disease damage on cartilage & disease damaged on bone, with a maximum score of 8 points/joints. Scores were categorized based on severity. Joint abnormalities can be quantified using an additive scoring scale. A total HEAD-US score per subject was calculated as sum of total scores per joints, for subjects with all joints assessed. Higher scores=worse joint health. Week 1=MO42245 baseline assessment. Safety population=subjects who received at least one dose of emicizumab. Number analysed=subjects with data available for analysis.

Secondary: Joint Health Assessed Using Hemophilia Joint Health Score (HJHS) 2.1

End point title	Joint Health Assessed Using Hemophilia Joint Health Score (HJHS) 2.1
End point description:	
HJHS measures joint health, in domains of body structure & function (impairment) of joints most affected by bleeding in hemophilia: knees, ankles & elbows. It consists of assessment of swelling (0=None3=Severe); duration of swelling (0=no swelling/<6 months1=≥6 months); muscle atrophy (0=None2=Severe); crepitus on motion (0=None2=Severe); flexion loss & extension loss (0=<5° 3=>20°); joint pain (0=No pain through active range of motion2=Pain); strength (0=Holds test position against gravity within maximum resistance4=Trace/no contraction); & Global Gait Score (GGS; 0=All skills in normal limits(NL)4=No skills in NL). HJHS Total Score=sum of all joint domain scores (6*20 points+4 points for GGS). Higher score=worse joint health. Clinically relevant improvements=≥4-point reduction in Total HJHS/≥2-point reduction in HJHS joints domain. Week 1=MO42245 baseline. Safety population; subjects with all joints assessed by HJHS & GGS. n=number of subjects analysed at that timepoint.

Secondary: ABR for Treated Spontaneous or Traumatic Bleeds Over Time

End point title	ABR for Treated Spontaneous or Traumatic Bleeds Over Time
End point description:	
An event was considered a treated bleed if coagulation factors were administered to treat signs or symptoms of bleeding (e.g., pain, swelling, etc.). Bleeds were classified as spontaneous if a subject recorded a bleed when there was no known contributing factor such as definite trauma, antecedent "strenuous" activity or "overuse" or "procedure/surgery." Bleeds were classified as traumatic if a subject recorded a bleed when there was a known or believed reason for the bleed. Bleeds & treatment of bleeds were captured through the BMQ. Number of treated bleeds was estimated as an ABR using a negative binomial regression model, which accounts for different follow-up times. Bleed rate was calculated over the 48 weeks of MO42245 compared to 24 weeks of MO42590. ABR was derived as follows: number of bleeds/number of days during observational period (the time that each subject stays in the study) * 365.25. Safety population=all subjects who received at least 1 dose of emicizumab.

Secondary: Number of FVIII Infusions Required to Treat a Breakthrough Bleed

End point title	Number of FVIII Infusions Required to Treat a Breakthrough Bleed
-----------------	--

End point description:

The non-emicizumab Factor VIII (FVIII) infusions used to treat a bleed were categorized as standard half-life [SHL] and extended half-life [EHL]. The number of FVIII infusions was counted per bleed (all treatments that are linked to the same bleed per the 72h rule were considered to belong to the same bleed). If the same treatment(s) were associated with multiple bleeds, these were counted multiple

times, i.e. linked to both bleeds. Participants experienced a total of 82 and 39 bleeds that required treatment with coagulation factors, while on FVIII and emicizumab prophylaxis respectively. Safety population included all subjects who received at least one dose of emicizumab.

Secondary: Health Status Assessed Using European Quality of Life Five-Dimension-Five Level Questionnaire (EQ-5D-5L)

End point title	Health Status Assessed Using European Quality of Life Five-Dimension-Five Level Questionnaire (EQ-5D-5L)
-----------------	--

End point description:

The EQ-5D-5L was a validated, self-report, health status questionnaire that was used to calculate a health status utility score. The EQ-5D-5L consists of two parts, the first : health state classification, contains five dimensions of health (mobility, self-care, usual activities, pain/discomfort, and anxiety/depression). Overall scores typically range from 0 to 1. Low scores represent a higher level of dysfunction. The second part: VAS assesses current health status. using a score range of 0 to 100-points. Higher scores indicate better health. VAS was to be analysed from the EQ-5D-5L Week 1= MO42245 baseline assessment. Safety population included all subjects who received at least one dose of emicizumab. Number analysed included subjects with data available for analysis. n=subjects with data available for analysis at that specified timepoint.

Secondary: Caregiver Burden Assessed Using Hemophilia Associated Caregiver Burden Scale (HEMOCAB) Total Score

End point title	Caregiver Burden Assessed Using Hemophilia Associated Caregiver Burden Scale (HEMOCAB) Total Score
End point description: HEMOCAB is a caregiver questionnaire comprising 54 questions pertaining to 13 domains (emotional	

stress, financial burden, personal sacrifice and limitations, job-related burden, interactions with others, interaction of child with others, school, perception of child, dealing with child's hemophilia, medical management, work situation related to hemophilia, interaction with the child's father, and impact of child's hemophilia). Responses to each domain were answered on a five-point Likert scale, with the scale assessing the nine frequency of burden domains ranging from "never" to "always," and assessing the intensity of the four perceived burden domains ranging from "not at all" to "very much." High values imply high burden. Week 1= MO42245 baseline assessment. HEMOCAB was completed by the parent/caregiver of adolescents 12-17 years old. Safety population included all subjects who received at least one dose of emicizumab. Number analysed includes subjects with available data.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 April 2021	Protocol Version 2: 1. Fitbit activity tracker data collection was limited to subjects aged 13 and older and the specific data collected by the Fitbit Charge 4 device were explicitly defined to refine the objective for the activity tracker. 2. Intensity of physical activity was included when evaluating bleeds related to exercise. 3. Clarifications were made to differentiate between non-electronic case report form (eCRF) and eCRF data. 4. The socio-demographic section was removed from HEMOCAB. 5. New guidance was included to manage potential cases of neutralizing anti-drug antibodies, especially in scenarios where a loss of efficacy is noted.
17 March 2022	Protocol Version 3: 1. The total number of subjects was reduced from approximately 50 subjects to approximately 30 subjects. The adjustment has been done based on the recruitment at the time and realistic estimation of potential subjects from each site. 2. The inclusion criteria age was changed from ≥ 12 -51 years old to ≥ 12 -61 years, to provide adequate numbers for age group analysis considering the reduced total number of subjects. 3. HEMOCAB has been updated to the latest shortened version. 4. Use of FVIII, given before an activity, has been changed to "allowed under certain circumstances," where FVIII can be given before intense physical activity and the Medical Monitor should be informed in advance. 5. The anticipated recruitment period has been prolonged from 44 to 55 weeks.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
