

## Clinical trial results:

### A Double-blind, Placebo-controlled, Randomized, 18-month Phase 2a Study to Evaluate the Efficacy, Safety, Tolerability, and Pharmacokinetics of Oral UCB0599 in Study Participants with Early Parkinson's Disease

#### Summary

EudraCT number	2020-003265-19
Trial protocol	DE FR PL ES NL IT
Global end of trial date	06 September 2024

#### Results information

Result version number	v2 (current)
This version publication date	16 November 2025
First version publication date	23 October 2025
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set Alignment with final posting on ClinicalTrials.gov after NIH review.</li></ul>

#### Trial information

##### Trial identification

Sponsor protocol code	PD0053
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04658186
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	UCB Biopharma SRL
Sponsor organisation address	Allée de la Recherche 60, Brussels, Belgium, 1070
Public contact	UCB BIOSCIENCES GmbH, Clin Trial Reg & Results Disclosure, clinicaltrials@ucb.com
Scientific contact	UCB BIOSCIENCES GmbH, Clin Trial Reg & Results Disclosure, clinicaltrials@ucb.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 October 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 September 2024
Global end of trial reached?	Yes
Global end of trial date	06 September 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study is to demonstrate the superiority of UCB0599 over placebo with regard to clinical symptoms of disease progression over 12 and 18 months in participants diagnosed with early-stage Parkinson's Disease (PD)

Protection of trial subjects:

During the conduct of the study all participants were closely monitored. DAT-SPECT related: Each study participant received a maximum of 3 injections of <sup>123</sup>I-Ioflupane during the study, according to the approved label. The target single injection dose of 185MBq is estimated to result in a radiation burden of 4.63mSv and the total effective dose for the study will be 13.89mSv. This is categorized as a category III substantial risk level (ICR62), which is balanced by the substantial societal benefit from the results of this clinical study. A dose of a thyroid blocking agent was given before the radiotracer dose.

Background therapy:

Background therapy as permitted in the protocol.

Evidence for comparator: -

Actual start date of recruitment	30 December 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	France: 66
Country: Number of subjects enrolled	Germany: 58
Country: Number of subjects enrolled	Italy: 55
Country: Number of subjects enrolled	Netherlands: 22
Country: Number of subjects enrolled	Poland: 84
Country: Number of subjects enrolled	Spain: 28
Country: Number of subjects enrolled	United Kingdom: 32
Country: Number of subjects enrolled	United States: 130
Worldwide total number of subjects	496
EEA total number of subjects	313

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	313
From 65 to 84 years	183
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study started to enroll participants in December 2020 and concluded in September 2024.

### Pre-assignment

Screening details:

The Participant Flow refers to the Randomized Set.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants received UCB0599 matching-placebo capsules, orally, from Day 1 up to 18 months during treatment period.

Arm type	Placebo
Investigational medicinal product name	UCB0599 matching-placebo capsules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

UCB0599 matching-placebo capsules were administered orally, from Day 1 to Month 18

<b>Arm title</b>	UCB0599 180 mg/day
------------------	--------------------

Arm description:

Participants received UCB0599 90 milligram (mg) capsules twice daily (BID), for a total daily dose of 180 mg, along with matching placebo capsules BID, administered orally from Day 1 up to 18 months during treatment period.

Arm type	Experimental
Investigational medicinal product name	UCB0599
Investigational medicinal product code	
Other name	Minzasolmin
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

UCB0599 180 mg/day capsules were administered orally, from Day 1 to Month 18.

<b>Arm title</b>	UCB0599 360 mg/day
------------------	--------------------

Arm description:

Participants received UCB0599 180 mg capsules twice daily (BID), for a total daily dose of 360 mg, administered orally from Day 1 up to 18 months during treatment period.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	UCB0599
Investigational medicinal product code	
Other name	Minzasolmin
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

UCB0599 360 mg/day capsules were administered orally, from Day 1 to Month 18.

<b>Number of subjects in period 1</b>	Placebo	UCB0599 180 mg/day	UCB0599 360 mg/day
Started	165	166	165
Completed	154	138	139
Not completed	11	28	26
Participant is Moving in Another Province	-	1	-
Non-Compliance	-	1	1
Adverse event, non-fatal	4	18	15
Dropout on the Promotor's Decision	-	-	1
Worsening Symptoms; Participant Withdrew	-	-	1
Site Closure; Participant declined transfer	-	1	-
Lost to follow-up	-	-	2
Participant Not Eligible. Randomized In Error	1	-	1
Consent Withdrawn by Participant (not due to AE)	5	6	3
Lack of efficacy	1	1	-
Protocol deviation	-	-	1
PI Decision due to Participant Safety	-	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description: Participants received UCB0599 matching-placebo capsules, orally, from Day 1 up to 18 months during treatment period.	
Reporting group title	UCB0599 180 mg/day
Reporting group description: Participants received UCB0599 90 milligram (mg) capsules twice daily (BID), for a total daily dose of 180 mg, along with matching placebo capsules BID, administered orally from Day 1 up to 18 months during treatment period.	
Reporting group title	UCB0599 360 mg/day
Reporting group description: Participants received UCB0599 180 mg capsules twice daily (BID), for a total daily dose of 360 mg, administered orally from Day 1 up to 18 months during treatment period.	

Reporting group values	Placebo	UCB0599 180 mg/day	UCB0599 360 mg/day
Number of subjects	165	166	165
Age Categorical Units: participants			
18 years to less than (<) 65 years	98	105	110
65 years to <85 years	67	61	55
Age Continuous Units: years			
arithmetic mean	61.2	61.4	59.9
standard deviation	± 8.3	± 7.8	± 8.4
Sex: Female, Male Units: participants			
Female	65	66	65
Male	100	100	100

Reporting group values	Total		
Number of subjects	496		
Age Categorical Units: participants			
18 years to less than (<) 65 years	313		
65 years to <85 years	183		
Age Continuous Units: years			
arithmetic mean			
standard deviation	-		
Sex: Female, Male Units: participants			
Female	196		
Male	300		

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Participants received UCB0599 matching-placebo capsules, orally, from Day 1 up to 18 months during treatment period.	
Reporting group title	UCB0599 180 mg/day
Reporting group description: Participants received UCB0599 90 milligram (mg) capsules twice daily (BID), for a total daily dose of 180 mg, along with matching placebo capsules BID, administered orally from Day 1 up to 18 months during treatment period.	
Reporting group title	UCB0599 360 mg/day
Reporting group description: Participants received UCB0599 180 mg capsules twice daily (BID), for a total daily dose of 360 mg, administered orally from Day 1 up to 18 months during treatment period.	

### Primary: Movement Disorder Society Unified Parkinson's Disease Rating Scale (MDS-UPDRS) Parts I-III Sum Score at Day 0

End point title	Movement Disorder Society Unified Parkinson's Disease Rating Scale (MDS-UPDRS) Parts I-III Sum Score at Day 0 <sup>[1]</sup>
End point description: MDS-UPDRS is multimodal scale. Part I assessed non-motor experiences of daily living and has 2 components (0–52 possible points). Part IA: 6 questions and assessed by examiner (0–24 possible points). Part IB: 7 questions on non-motor experiences of daily living completed (0–28 possible points). Part II assessed motor experiences of daily living (0–52 possible points) and includes 13 questions completed. Part III assessed motor signs of PD and was administered by rater (0–52 possible points). Part III: 33 questions based on 18 items. For all questions of each part, numeric score response options linked to accepted clinical terms: 0 to 4, 0=Normal, 1=Slight, 2=Mild, 3=Moderate, 4=Severe. Total Score equals sum of Parts I, II, and III (Score: 0–236). Higher score = more severe PD symptoms. Full analysis set (FAS) included all randomized participants who received at least partial study dose and had ≥1 post-Baseline assessment. Number analyzed includes those evaluable for this assessment.	
End point type	Primary
End point timeframe: Day 0	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized as descriptive statistics only.

End point values	Placebo	UCB0599 180 mg/day	UCB0599 360 mg/day

For all questions of each part, numeric score response options linked to accepted clinical terms: 0 to 4, 0=Normal, 1=Slight, 2=Mild, 3=Moderate, 4=Severe. Total Score equals sum of Parts I, II, and III (Score: 0–236). Higher score = more severe PD symptoms. FAS included all randomized participants who received at least partial study dose and had ≥1 post-Baseline assessment. Number analyzed includes those evaluable for this assessment.

End point type	Primary
----------------	---------

End point timeframe:

Month 18

Notes:

[10] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized as descriptive statistics only.

## Secondary: MDS-UPDRS Part III Subscale

End point title	MDS-UPDRS Part III Subscale
-----------------	-----------------------------

End point description:

MDS-UPDRS part III includes motor items assessing speech, facial expression, rigidity, finger tapping, hand movements, pronation supination movements of hands, toe tapping, leg agility, arising from chair, gait, freezing of gait, postural stability, posture, global spontaneity of movement (body bradykinesia), postural tremor of the hands, kinetic tremor of the hands, rest tremor amplitude, and constancy of rest tremor. It included 33 scores based on 18-items, each anchored with 5 responses:

0=normal,1=slight,2=mild,3=moderate, 4=severe. The scale range was from 0 to 132, with a lower score = better motor function and a higher score = more severe motor symptoms. FAS included all randomized study participants who received at least a partial dose of study medication, have at least 1 post-Baseline assessment. Here, "N" included all participants who were evaluable for this assessment and number analyzed (n) signifies participants who were evaluable at specified timepoints.

## Secondary: MDS-UPDRS Part III Early-stage Parkinson's Disease (ePD) Subscore on Selected Items

End point title	MDS-UPDRS Part III Early-stage Parkinson's Disease (ePD) Subscore on Selected Items
-----------------	---

End point description:

The early-stage Parkinson's disease (ePD) subscore is derived from a 15-item subset of the MDS-UPDRS Part III (Motor Examination). It includes all rigidity assessments (neck, upper limbs [right/left], and lower limbs [right/left]) and bradykinesia-related tasks: finger tapping (right/left), hand movements (right/left), pronation-supination of hands (right/left), toe tapping (right/left), and leg agility (right/left). Each item is scored on a 5-point likert scale (0 = no problem to 4 = severe), resulting in a total ePD subscore range of 0 to 60. Higher scores indicate greater motor impairment, while lower scores reflect better motor function. FAS was used. "N"= all participants who were evaluable for this assessment; 'n'=participants who were evaluable at specified timepoints.

### Secondary: Change from Screening in Dopamine Transporter Imaging with Single Photon Emission Computed Tomography (DaT-SPECT) Mean Striatum Specific Binding Ratios (SBR)

End point title	Change from Screening in Dopamine Transporter Imaging with Single Photon Emission Computed Tomography (DaT-SPECT) Mean Striatum Specific Binding Ratios (SBR)
-----------------	---

End point description:

The change from screening in mean striatum specific binding ratios (SBR) was assessed by DaT-SPECT using 123I-Ioflupane as radiopharmaceutical. The whole striatum was calculated as the average of the SBR data values for the four following "small" regions: left caudate small, left putamen small, right caudate small and right putamen small. The SBR was calculated for each region with the occipital cortex as a reference region, where a lower SBR indicates worse disease. The following formula was used to calculate this: (Average [Small region] – Average [Occipital region]) / (Average [Occipital region]). FAS included all randomized study participants who received at least a partial dose of study medication, have at least 1 post-Baseline assessment. Here, number of participants analyzed included all participants who were evaluable for this assessment and 'n' signifies participants who were evaluable at each specified timepoints.

## Secondary: Symptomatic Treatment (ST) Intake

End point title	Symptomatic Treatment (ST) Intake
-----------------	-----------------------------------

End point description:

Cumulative number of participants on symptomatic treatment (ST) at 18 months are reported. FAS included all randomized study participants who received at least a partial dose of study medication, have at least 1 post-Baseline assessment. Here, number of participants analyzed included all participants who were evaluable for this assessment.

End point type	Secondary
----------------	-----------

End point timeframe:

Month 18

End point values	Placebo	UCB0599 180 mg/day	UCB0599 360 mg/day	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	153	139	140	
Units: participants	111	89	88	

## Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of Participants With Treatment-emergent Adverse Events (TEAEs)

End point title	Percentage of Participants With Treatment-emergent Adverse Events (TEAEs)
-----------------	---

End point description:

An AE is any untoward medical occurrence in a patient or clinical study participant, temporally associated with the use of study medication, whether or not considered related to the study medication. A TEAE is defined as any AE with a start date on or after the first dose of treatment or any unresolved event already present before administration of treatment that worsens in intensity following exposure to the treatment. Safety set included all randomized study participants who receive at least a partial dose of study medication.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline up to 30 days of safety follow-up after the last dose of the study drug (up to 19 months)

End point values	Placebo	UCB0599 180 mg/day	UCB0599 360 mg/day	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	164	165	164	
Units: percentage of participants				
number (not applicable)	87.8	86.7	87.2	

## Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of Participants With Serious TEAEs

End point title	Percentage of Participants With Serious TEAEs
-----------------	---

End point description:

Serious adverse event: Death, a life-threatening adverse event, inpatient hospitalization or prolongation of existing hospitalization, a persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions, or a congenital anomaly/birth defect. Important medical events that may not result in death, be life-threatening, or require hospitalization may be considered serious when, based upon appropriate medical judgment, they may jeopardize the patient or subject and may require medical or surgical intervention to prevent one of the outcomes listed in this definition. Safety set included all randomized study participants who receive at least a partial dose of study medication.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline up to 30 days of safety follow-up after the last dose of the study drug (up to 19 months)

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From Baseline up to 30 days of safety follow-up after the last dose of the study drug (up to 19 months)

Adverse event reporting additional description:

Safety analysis set included all randomized study participants who received at least a partial dose of study medication.

Assessment type	Non-systematic

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received UCB0599 matching-placebo capsules, orally, (4 UCB0599 matching-placebo capsules) twice per day (BID) from Day 1 up to 18 months.

Reporting group title	UCB0599 360 mg/day
-----------------------	--------------------

Reporting group description:

Participants received UCB0599 180 mg capsules twice daily (BID), for a total daily dose of 360 mg, administered orally from Day 1 up to 18 months during treatment period.

Reporting group title	UCB0599 180 mg/day
-----------------------	--------------------

Reporting group description:

Participants received UCB0599 90 milligram (mg) capsules twice daily (BID), for a total daily dose of 180 mg, along with matching placebo capsules BID, administered orally from Day 1 up to 18 months during treatment period.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 October 2020	Protocol Amendment 1 was dated 29 Oct 2020. The purpose of this substantial amendment was to remove planned video recording of participants during the MDS-UPDRS Part III assessment due to operational limitations (example, procedures for de-identification, video processing, video data handling, access, and storage).
21 May 2021	Protocol Amendment 2 was dated 21 May 2021. The purpose of this substantial amendment was to increase the upper age limit for participants' inclusion in the study to 75 years, to reflect the ePD population. This population did not present additional risk compared to the population initially included in the study.
04 October 2021	Protocol Amendment 3 was dated 04 Oct 2021. The purpose of this substantial amendment was to add a treatment group with a lower dose of UCB0599, allowed the use of historical symptomatic treatments, and harmonized feedback from regulatory authorities and ethic review boards received during the initial Clinical Trial Applications.
24 February 2022	Protocol Amendment 4 was dated 24 Feb 2022. The purpose of this substantial amendment was to amend exclusion and discontinuation criteria regarding renal function, diabetes, and electrocardiograph (ECG) abnormalities to better reflect the parameters in the targeted study population.
30 June 2023	Protocol Amendment 5 was dated 30 Jun 2023. The purpose of this substantial amendment was to incorporate additional laboratory tests at Day 150 in order to allow for close monitoring of liver function test parameters.
21 March 2024	Protocol Amendment 6 was dated 21 Mar 2024. The purpose of this substantial amendment was to provided clarification around blinding and the timing of the Month 12 data analysis, and remove analyses that were no longer needed. In addition, the list of secondary and exploratory efficacy endpoints was updated.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
