Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002938-PIP01-20
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 August 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 August 2023
Global end of trial reached?	Yes
Global end of trial date	04 August 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the safety and tolerability of oral Islatravir (ISL) once monthly (QM) as Preexposure Prophylaxis (PrEP) in cisgender men who have sex with men and transgender women who have sex with men and who are at high risk of HIV-1 infection with 48 or 96 weeks of treatment and a follow-up of ≥ 42 days.

Due to decreased lymphocyte and CD4+ T-cell counts across the ISL program, blinded dosing was halted on 10-Dec-2021, with no further enrollment. Thus, no participants <18 years of age were randomized. Assessments conducted prior to then are designated as Part 1. In Part 2, participants from Part 1 were switched to open-label PrEP therapy with emtricitabine/tenofovir disoproxil (FTC/TDF) or emtricitabine/tenofovir alafenamide (FTC/TAF) while continuing in the study. In Part 3, the study was unblinded to original randomized intervention group, and participants were permitted to continue receiving unblinded FTC/TDF or FTC/TAF until the end of the study.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 12
Country: Number of subjects enrolled	Japan: 26
Country: Number of subjects enrolled	South Africa: 59
Country: Number of subjects enrolled	Thailand: 68
Country: Number of subjects enrolled	United States: 277
Country: Number of subjects enrolled	Peru: 52
Worldwide total number of subjects	494
EEA total number of subjects	12

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	492
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were randomized at 23 study sites in France, Japan, Peru, South Africa, and the United States.

Period 1

Period 1 title	Main Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	ISL QM Group

Arm description:

Participants received 60 mg tablet of ISL QM monthly (QM) plus placebo to FTC/TDF tablet once daily (QD) or placebo to FTC/TAF tablet QD for up to 24 months of treatment duration.

Arm type	Experimental
Investigational medicinal product name	Islatravir
Investigational medicinal product code	
Other name	MK-8591
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

ISL 60 mg tablet, QM, orally for up to 24 months

Investigational medicinal product name	Placebo to FTC/TAF
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo FTC/TAF 0 mg tablets QD, orally for up to 24 months

Investigational medicinal product name	Placebo to FTC/TDF
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo FTC/TDF 0 mg tablets QD, orally for up to 24 months

Arm title	FTC/TDF or FTC/TAF QD Group
------------------	-----------------------------

Arm description:

Participants receive 200/245 mg or 200/300 mg of FTC/TDF combination tablet, QD, orally or 200/25 mg of FTC/TAF combination tablet, QD, orally at investigator's discretion plus Placebo to ISL tablet QM, orally for up to 24 months of treatment duration.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Emtricitabine/Tenofovir Disoproxil Fumarate
Investigational medicinal product code	
Other name	FTC/TDF Truvada
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants receive 200/245 mg of FTC/TDF combination tablet, QD, orally for up to 24 months

Investigational medicinal product name	Placebo to ISL
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo ISL 0 mg tablets QM, orally for up to 24 months

Investigational medicinal product name	Emtricitabine/Tenofovir Alafenamide
Investigational medicinal product code	
Other name	Descovy
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants receive 200/25 mg of FTC/TAF combination tablet, QD, orally for up to 24 months

Number of subjects in period 1	ISL QM Group	FTC/TDF or FTC/TAF QD Group

Reporting group title	ISL QM Group
Reporting group description: Participants received 60 mg tablet of ISL QM monthly (QM) plus placebo to FTC/TDF tablet once daily (QD) or placebo to FTC/TAF tablet QD for up to 24 months of treatment duration.	
Reporting group title	FTC/TDF or FTC/TAF QD Group
Reporting group description: Participants receive 200/245 mg or 200/300 mg of FTC/TDF combination tablet, QD, orally or 200/25 mg of FTC/TAF combination tablet, QD, orally at investigator's discretion plus Placebo to ISL tablet QM, orally for up to 24 months of treatment duration.	

Primary: Number of Participants Who Experienced an Adverse Event (AE) During Blinded Treatment + 42 Days Post-Blind

End point title	Number of Participants Who Experienced an Adverse Event (AE) During Blinded Treatment + 42 Days Post-Blind ^[1]
End point description: An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. The number of participants who experienced an AE will be reported for each treatment arm.	
End point type	Primary
End point timeframe: Up to approximately 12 months	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive statistics are presented.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 June 2021	AM1: The purpose of this amendment was to update the statistical methods for primary and secondary objectives.
06 December 2021	AM2: The purpose of this amendment was to increase frequency of monitoring of lymphocytes and to add C4+ T-cell monitoring.
24 February 2022	AM3: The purpose of this amendment was to halt dosing of blinded study intervention and to give participants the option to receive daily FTC/TDF or FTC/TAF.
03 August 2022	AM4: The purpose of this amendment was to add Part 3 to unblind each participant's Part 1 study intervention and monitor safety.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
10 December 2021	Dosing of blinded study intervention was halted on 10-Dec-2021 due to findings of decreased lymphocyte and CD4+ T-cell counts.	-

Notes:
