Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 May 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 May 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The study aims to evaluate the long-term safety and efficacy of satralizumab in participants with neuromyelitis optic spectrum disorder (NMOSD). Study WN42349 is not a part of a PIP. However, the parent studies (2013-003752-21 and 2015-005431-41) were a part of a PIP, with an EMA-PIP number of EMEA-001625-PIP01-14.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Country: Number of subjects enrolled	Türkiye: 1
Country: Number of subjects enrolled	Taiwan: 16
Country: Number of subjects enrolled	Ukraine: 12
Country: Number of subjects enrolled	United States: 47

Worldwide total number of subjects	166
EEA total number of subjects	51

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	8
Adults (18-64 years)	154
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 119 participants from studies BN40898 & BN40900 rolled over in study WN42349 at 53 sites in 17 countries. 'All Participants-treated population' is used to report results, which includes 166 participants who received at least one dose of satralizumab at any time during parent studies or this study, irrespective of enrollment in WN42349.

Pre-assignment

Screening details:

Participants from 2013-003752-21 and 2015-005431-41 enrolled in this study to receive satralizumab treatment. Participants were permitted to use azathioprine (AZA) or mycophenolate mofetil (MMF) or oral corticosteroids during the study as background immunosuppressive treatments.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Satralizumab
-----------	--------------

Arm description:

Participants rolled over from studies 2013-003752-21 and 2015-005431-41 received satralizumab, 120 milligrams (mg) as subcutaneous (SC) injection, every 4 weeks (Q4W) up to a maximum duration of 3 years in the current study. Participants who received at least 1 dose of satralizumab at any time during parent studies or this study, irrespective of enrollment in the current study are represented here.

Arm type	Experimental
Investigational medicinal product name	Satralizumab
Investigational medicinal product code	RO5541267
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Satralizumab, 120 mg, as SC injection for up to 3 years.

Number of subjects in period 1	Satralizumab
Started	166
Completed	106
Not completed	60
Consent withdrawn by subject	21
Adverse Event	10
Switch To Commercial Satralizumab	1
Pregnancy	2
Non-Compliance With Study Drug	3
Lost to follow-up	5
Reason not Specified	12

Lack of efficacy	4
Protocol deviation	2

Baseline characteristics

Reporting groups

Reporting group title	Satralizumab

End points

End points reporting groups

Reporting group title	Satralizumab
Reporting group description: Participants rolled over from studies 2013-003752-21 and 2015-005431-41 received satralizumab, 120 milligrams (mg) as subcutaneous (SC) injection, every 4 weeks (Q4W) up to a maximum duration of 3 years in the current study. Participants who received at least 1 dose of satralizumab at any time during parent studies or this study, irrespective of enrollment in the current study are represented here.	

Primary: Number of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs) ^[1]
-----------------	---

End point description:

AE=any untoward medical occurrence in a participant administered a medicinal product, regardless of causal relationship with it. AE=unfavorable & unintended sign, symptoms/disease temporally associated with use of medicinal product, whether or not considered related to it. SAE=any significant hazard, contraindication/side effect that is fatal/ life-threatening, requires hospitalization/prolongation of existing hospitalization, results in persistent/significant disability/incapacity, is congenital anomaly, is medically significant/requires intervention. First dosing visit in current study/randomization visit in the parent studies was considered as baseline. All AEs from time of randomization in parent studies up to end of study WN42349 for satralizumab-treated participants are reported here. All Participants-treated population=participants who received at least 1 dose of satralizumab at any time during parent or this study, irrespective of enrollment in current study.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to 523 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistics was planned for this endpoint.

End point values	Satralizumab			
Subject group type	Reporting group			
Number of subjects analysed	166			
Units: participants				
AEs	162			
SAEs	44			

Statistical analyses

No statistical analyses for this end point

Primary: Number of Participants with Adverse Events of Special Interest (AESIs) and Selected AEs

End point title	Number of Participants with Adverse Events of Special Interest (AESIs) and Selected AEs ^[2]
-----------------	--

End point description:

An AESIs included potential drug induced liver injury & suspected transmission of infectious agent by

study drug defined as any organism, virus or infectious particle, pathogenic or non-pathogenic causing clinical symptoms or laboratory findings that indicate infection in participant exposed to medicinal product. Selected AEs included infections that required treatments with IV antibiotics, antifungals or antivirals; opportunistic infections that required treatment with oral antibiotics, antifungals or antivirals and injection related reaction. First dosing visit in current study or randomization visit in parent studies (2013-003752-21/2015-005431-41) was considered as baseline for this endpoint. All AEs from time of randomization in parent studies up to end of study WN42349 for satralizumab-treated participants are reported here. All Participants-treated population included participants who received at least 1 dose of satralizumab at any time during parent or this study.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to 523 weeks

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistics was planned for this endpoint.

Secondary: Number of Participants with Suicidality Assessed Using Columbia-Suicide Severity Rating Scale (C-SSRS)

End point title	Number of Participants with Suicidality Assessed Using Columbia-Suicide Severity Rating Scale (C-SSRS)
-----------------	--

End point description:

C-SSRS=assessment tool used to assess lifetime suicidality of a participant (at baseline) and any new instances of suicidality (since last visit). Structured interview prompts recollection of suicidal ideation, including intensity of ideation, behavior and attempts with actual/potential lethality. Categories have 2 responses(yes/no) & include a-Wish to be Dead; b-Non-specific Active Suicidal Thoughts; c-Active Suicidal Ideation with Any Methods(Not Plan) w/o Intent to Act; d-Active Suicidal Ideation with Some Intent to Act, w/o Specific Plan; e-Active Suicidal Ideation with Specific Plan & Intent, f-Preparatory Acts & Behavior; g-Aborted Attempt; h-Interrupted Attempt; i-Actual Attempt(non-fatal); j-Completed Suicide. Suicidal ideation or behavior is indicated by yes answer to any categories. Score=0 if no suicide risk present. Score≥1=suicidal ideation or behavior. All Participants-treated population. Baseline=1st dosing visit in current study/randomization visit in parent studies.

Statistical analyses

No statistical analyses for this end point

Secondary: Annualized Relapse Rate (ARR)

End point title	Annualized Relapse Rate (ARR)
-----------------	-------------------------------

End point description:

ARR calculated as total number of relapses experienced divided by participant-years of whole study period. Adjusted AAR was calculated using Poisson regression model adjusted by study identifier (BN40898, BN40900). ARR was assessed from randomization in parent studies to 1st occurrence of iPDR. PDR = occurrence of new/worsening neurological symptoms attributable to NMO/NMOSD. New/worsening neurological symptoms occurring < 31 days following onset of PDR were considered part of same relapse. Time point of relapse onset=time at which participant experienced any new/worsening neurological symptoms representing NMOSD clinical relapse(s). Baseline was defined as first dosing visit in current study/randomization visit in parent studies (2013-003752-21/2015-005431-41). All ARR data from time of randomization in parent studies up to end of study WN42349 for satralizumab-treated participants are reported here. All Participants-treated population included participants is used for analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to 528 weeks

End point values	Satralizumab			
Subject group type	Reporting group			
Number of subjects analysed	166			
Units: relapses per participant-year				
number (confidence interval 95%)	0.0788 (0.0633 to 0.0982)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Relapse-Free Participants

End point title	Percentage of Relapse-Free Participants
-----------------	---

End point description:

Protocol-defined relapse was the occurrence of new or worsening neurological symptoms attributable to NMOSD. New or worsening neurological symptoms that occur < 31 days following the onset of a PDR were considered part of the same relapse. The first dosing visit in the current study or randomization visit in the parent studies (2013-003752-21/2015-005431-41) was considered as baseline for this endpoint. All data from the time of randomization in the parent studies up to end of study WN42349 for satralizumab-treated participants are reported here. Participants who did not experience any relapse events are reported here. Percentages have been rounded off to the nearest decimal point. All Participants-treated population included participants who received at least one dose of satralizumab at

any time either during the parent studies or this study, irrespective of enrollment in current study.

Secondary: Time to First Protocol-defined Relapse (PDR) as Assessed by Investigator (iPDR)

End point title	Time to First Protocol-defined Relapse (PDR) as Assessed by Investigator (iPDR)
-----------------	---

End point description:

Time to first relapse (TFR) was defined as the time from randomization in parent studies to the first occurrence of the first iPDR. PDR=occurrence of new or worsening neurological symptoms attributable to NMO/NMOSD. New/worsening neurological symptoms occurring < 31 days following onset of PDR were considered part of same relapse. Time point of relapse onset=time at which participant experienced new/worsening neurological symptoms representing NMOSD clinical relapse(s). For participants who did not relapse at the time of analysis, TFR was censored at clinical cutoff date (CCOD) or at withdrawal from study. Baseline=1st visit in current study/randomization visit in parent studies. TFR data from time of randomization in parent studies to end of this study for satralizumab-treated participants are reported. All Participants-treated population. 99999=insufficient number of events to estimate median and 95% CI.

Secondary: Event-free Rate for EDSS Score Worsening up to Week 456

End point title	Event-free Rate for EDSS Score Worsening up to Week 456
End point description:	
Event-free rate for EDSS score worsening=percentage of participants who did not experience worsening in their EDSS score from baseline. EDSS=quantitative measure of disability & for assessment of severity of relapse for participants with NMOSD. Values from 0 points (normal neurological examination) up to 10 points (death), increasing in increments of 0.5 points. Higher scores=increased disability. Participants were censored at the date of the last EDSS assessment or if no EDSS assessment was performed at the randomization date. Baseline=last observation on/before the day of first study drug administration in current study/parent studies (2013-003752-21/2015-005431-41). All EDSS data from the time of randomization in parent studies up to Week 456 for satralizumab-treated participants are reported here. Kaplan-Meier method was used to estimate the event-free rates. All Participants-treated population is used. Number analyzed is number of participants with data available for analysis.

All Participants-treated population included participants who received at least one dose of satralizumab at any time either during the parent studies or this study, irrespective of enrollment in current study. Number analyzed is the number of participants with data available for analysis. "n"=participants with data available for analysis at the specified timepoint. 99999=Geometric coefficient of variation was not evaluable as only 1 participant was analyzed.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 2, Week 4, Week 5, Week 6; every 4 weeks from Weeks 8 to 192; every 24 weeks from Weeks 216 to 528

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with Anti-Drug Antibodies (ADAs) from the First Dose of Satralizumab in Studies 2013-003752-21 and 2015-005431-41

End point title	Number of Participants with Anti-Drug Antibodies (ADAs) from the First Dose of Satralizumab in Studies 2013-003752-21 and 2015-005431-41
-----------------	--

End point description:

Number of ADA-positive participants & ADA-negative participants at baseline (baseline prevalence) & after drug administration (post-baseline incidence) were summarized. Baseline evaluable participants = participants with an ADA assay result at baseline. Post-baseline evaluable participants = participants with an ADA assay from at least one post-baseline sample. Participants positive for ADA= number of participants with positive ADA result. Participants negative for ADA=number of participants with negative or missing baseline ADA result(s) & all negative post-baseline results. Baseline = last observation collected on or before day of first study drug administration in parent studies. All data from the time of randomization in the parent studies up to the end of study WN42349 for satralizumab-treated participants are reported here. All Participants-treated population is used for analysis. 'n'=number of participants with data available for analysis at the specified timepoint.

End point type	Secondary
----------------	-----------

End point timeframe:

First dose of satralizumab in parent studies up to 528 weeks

End point values	Satralizumab			
Subject group type	Reporting group			
Number of subjects analysed	166			
Units: participants				
Baseline Positive (N=166)	3			
Post-baseline Positive (N=164)	99			
Baseline Negative (N=166)	161			
Post-baseline Negative (N=164)	67

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 523 weeks

Adverse event reporting additional description:

All Participants-treated population=all enrolled participants (in current study) who received at least 1 dose of satralizumab at any time either during parent studies or this study. First dosing visit in the current study or first satralizumab dosing visit in parent studies (2013-003752-21/2015-005431-41) was considered as baseline for this study.

Reporting groups

Reporting group title	Satralizumab
-----------------------	--------------

Reporting group description:

Participants rolled over from studies 2013-003752-21 and 2015-005431-41 received satralizumab, 120 mg as SC injection, Q4W up to a maximum duration of 3 years in this study. Participants who received at least 1 dose of satralizumab at any time during parent studies or this study, irrespective of enrollment in current study are represented here.

Serious adverse events	Satralizumab

<p>Infections and infestations</p>			

Sinusitis			
subjects affected / exposed	16 / 166 (9.64%)		
occurrences (all)	22		
Oral herpes			
subjects affected / exposed	9 / 166 (5.42%)		
occurrences (all)	70		
Nasopharyngitis			
subjects affected / exposed	48 / 166 (28.92%)		
occurrences (all)	132		
Influenza			
subjects affected / exposed	13 / 166 (7.83%)		
occurrences (all)	14		
Gastroenteritis			
subjects affected / exposed	9 / 166 (5.42%)		
occurrences (all)	17		
Ear infection			
subjects affected / exposed	10 / 166 (6.02%)		
occurrences (all)	13		
Cystitis			
subjects affected / exposed	15 / 166 (9.04%)		
occurrences (all)	18		
COVID-19			
subjects affected / exposed	31 / 166 (18.67%)		
occurrences (all)	33		
Oedema peripheral			
subjects affected / exposed	11 / 166 (6.63%)		
occurrences (all)	13		
Fatigue			
subjects affected / exposed	17 / 166 (10.24%)		
occurrences (all)	22		
Eczema			
subjects affected / exposed	10 / 166 (6.02%)		
occurrences (all)	11		
Rash			
subjects affected / exposed	20 / 166 (12.05%)		
occurrences (all)	27		

Urinary tract infection subjects affected / exposed occurrences (all)	40 / 166 (24.10%) 139		
Upper respiratory tract infection subjects affected / exposed occurrences (all)	46 / 166 (27.71%) 172		
Metabolism and nutrition disorders Hypercholesterolaemia subjects affected / exposed occurrences (all)	9 / 166 (5.42%) 19		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
