

Clinical trial results:

A Phase II, double-blind, placebo-controlled, Randomized, cross-over, dose-ranging study of oral PHA-022121 for Acute treatment of angioedema attacks in Patients with hereditary angioedema due to C1-Inhibitor Deficiency type I and II

Summary

EudraCT number	2020-003445-11
Trial protocol	FR ES HU NL PL DE CZ BG IT

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	23 September 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 September 2022
Global end of trial reached?	Yes
Global end of trial date	01 March 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of three different single doses of PHA-022121 (soft capsule formulation) versus placebo in achieving angioedema symptom reduction, defined as change in the 3-symptom composite visual analogue scale (VAS-3) score during hereditary angioedema (HAE) attacks in patients with HAE type 1/2.

Protection of trial subjects:

The study was conducted in accordance with this study protocol, the International Council for Harmonisation GCP (ICH GCP E6[R2]), and applicable local laws and regulations. Compliance with ICH-GCP provides public assurance that the rights, safety and well-being of study patients are protected, consistent with the principles that have their origin in the Declaration of Helsinki, and that the clinical trial data are credible.

The Principal Investigator ensured that no deviation from, or changes to the protocol will take place without prior agreement from the sponsor and documented approval from the IEC/IRB, except where necessary to eliminate an immediate hazard to the patients. All relevant personnel involved in the conduct of this study have completed ICH GCP training.

Background therapy: -

Evidence for comparator:

Placebo consisted of matching placebo soft capsules for oral use.

Actual start date of recruitment	03 February 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Worldwide total number of subjects	74
EEA total number of subjects	51

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	69
From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a multi-center study with a total of 36 sites in 13 countries (Bulgaria, Canada, Czechia, France, Germany, Hungary, Israel, Italy, Netherlands, Poland, Spain, United Kingdom, United States). A total of 89 participants were screened for the study, with 74 subjects enrolled into the study and received treatment.

Pre-assignment

Screening details:

All participants must have had a diagnosis of HAE-1/2 based upon all of the following:

Documented clinical history consistent with HAE

At least one of the following: age reported onset of first angioedema symptoms \leq 40 years, family history consistent with HAE-1/2, C1q within normal range

Diagnostic testing results to confirm HAE Type 1 or 2

Period 1

Period 1 title	Part I
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

All drug supplies were handled in a double-blinded manner. PHA-022121 capsules and placebo capsules were identical in appearance and each single dose consisted of 3 capsules. The contents of each wallet were blinded and the label on the wallet contained a unique code. Assignment of study drug in accordance with the randomized treatment assignment was managed by the IRT system.

Arms

Are arms mutually exclusive?	Yes
Arm title	Part I - PHA-022121 10 mg

Arm description:

Participants assigned to the PHA-022121 10 mg arm received a single dose of PHA-022121 (10 mg) during a quiescent non-attack state.

Arm type	Experimental
Investigational medicinal product name	PHA-022121
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The treatments to be administered in the study consist of 10 mg PHA-022121 soft capsules and matching placebo soft capsules for oral use:

- Low dose (10 mg): one capsule of 10 mg PHA-022121 and two placebo capsules

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo treatment consists of matching placebo soft capsules for oral use.

Arm title	Part I - PHA-022121 20 mg
------------------	---------------------------

Arm description:

Participants assigned to the PHA-022121 20 mg arm received a single dose of PHA-022121 (20 mg) during a quiescent non-attack state.

Arm type	Experimental
Investigational medicinal product name	PHA-022121
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The treatments to be administered in the study consist of 10 mg PHA-022121 soft capsules and matching placebo soft capsules for oral use:

- Medium dose (20 mg): two capsules of 10 mg PHA-022121 and one placebo capsule

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo treatment consists of matching placebo capsules for oral use.

Arm title	Part I - PHA-022121 30 mg
------------------	---------------------------

Arm description:

Participants assigned to the PHA-022121 30 mg arm received a single dose of PHA-022121 (30 mg) during a quiescent non-attack state.

Arm type	Experimental
Investigational medicinal product name	PHA-022121
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The treatments to be administered in the study consist of 10 mg PHA-022121 soft capsules for oral use:

- High dose (30 mg): three capsules of 10 mg PHA-022121

Number of subjects in period 1	Part I - PHA-022121 10 mg	Part I - PHA-022121 20 mg	Part I - PHA-022121 30 mg
Started	24	25	25
Completed	24	24	25
Not completed	0	1	0
Consent withdrawn by subject	-	1	-

Period 2

Period 2 title	Part II
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

All drug supplies were handled in a double-blinded manner. PHA-022121 capsules and placebo capsules were identical in appearance and each single dose consisted of 3 capsules. The contents of each wallet were blinded and the label on the wallet contained a unique code. Assignment of study drug in accordance with the randomized treatment assignment was managed by the IRT system.

Arms

Are arms mutually exclusive?	No
Arm title	Part II - PHA-022121 10 mg

Arm description:

Participants were treated with 2 single doses of PHA-022121 (10 mg) and one single dose of placebo. Each participant self-administered the study drug at their randomly assigned dose level (10 mg, low dose) for each of the 3 qualifying HAE attacks according to 1 of the following randomly assigned treatment sequences (crossover design):

1. Low dose - Low dose - Placebo
2. Low dose - Placebo - Low dose
3. Placebo - Low dose - Low dose

Arm type	Experimental
Investigational medicinal product name	PHA-022121
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The treatments to be administered in the study consist of 10 mg PHA-022121 soft capsules and matching placebo soft capsules for oral use:

- Low dose (10 mg): one capsule of 10 mg PHA-022121 and two placebo capsules

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo treatment consists of matching placebo soft capsules for oral use.

Arm title	Part II - PHA-022121 20 mg
------------------	----------------------------

Arm description:

Participants will receive two single doses of PHA-022121 (20 mg) and one single dose of placebo. Each patient self-administers two single doses of PHA-022121 (20 mg, medium dose) and one single dose of placebo for each of the three qualifying HAE attacks according to one of the following sequences (crossover design):

1. Medium dose - Medium dose - Placebo
2. Medium dose - Placebo - Medium dose
3. Placebo - Medium dose - Medium dose

Arm type	Experimental
Investigational medicinal product name	PHA-022121
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The treatments to be administered in the study consist of 10 mg PHA-022121 soft capsules and matching placebo soft capsules for oral use:

- Medium dose (20 mg): two capsules of 10 mg PHA-022121 and one placebo capsule

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo treatment consists of matching placebo capsules for oral use.

Arm title	Part II - PHA-022121 30 mg
------------------	----------------------------

Arm description:

Participants will receive two single doses of PHA-022121 (30 mg) and one single dose of placebo. Each patient self-administers two single doses of PHA-022121 (30 mg, high dose) and one single dose of placebo for each of the three qualifying HAE attacks according to one of the following sequences (cross-over design):

1. High dose - High dose - Placebo
2. High dose - Placebo - High dose
3. Placebo - High dose - High dose

Arm type	Experimental
Investigational medicinal product name	PHA-022121
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The treatments to be administered in the study consist of 10 mg PHA-022121 soft capsules for oral use:

- High dose (30 mg): three capsules of 10 mg PHA-022121

Arm title	Part II - Placebo
------------------	-------------------

Arm description:

Participants will receive two single doses of PHA-022121 and one single dose of placebo. Each patient self-administers two single doses of PHA-022121 (10, 20 or 30 mg) and one single dose of placebo for each of the three qualifying HAE attacks according to one of the following sequences (cross-over design):

1. PHA-022121 dose - PHA-022121 dose - Placebo
2. PHA-022121 dose - Placebo - PHA-022121 dose
3. Placebo - PHA-022121 dose - PHA-022121 dose

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo treatment consists of matching placebo soft capsules for oral use.

Subject analysis sets

Subject analysis set title	Full Analysis Set (FAS)
Subject analysis set type	Full analysis

Subject analysis set description:

The FAS was defined as all participants enrolled and randomized in the study. Participants were analyzed based on the intention-to-treat principle, ie, according to their randomized treatment assignment regardless of actual treatment taken.

Subject analysis set title	Modified Intent-To-Treat (mITT)
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

The modified Intent-to-Treat (mITT) Analysis Set was defined as a subset of FAS including all randomized participants who had at least one study drug-treated (blinded PHA 022121 or placebo) HAE attack and who had non missing VAS results at both pre treatment and at least 1 post-treatment time point of that attack. Participants were analyzed based on the intention-to-treat principle, ie, according to their randomized treatment assignment regardless of actual treatment taken.

Subject analysis set title	Safety Analysis Set
Subject analysis set type	Safety analysis

Subject analysis set description:

The Safety Analysis Set was defined as a subset of FAS including all randomized participants who received any dose of study drug. Participants were analyzed according to their actual treatment taken.

Subject analysis set title	Per-Protocol Analysis Set
Subject analysis set type	Per protocol

Subject analysis set description:

The Per-Protocol (PP) Analysis Set was defined as a subset of the mITT Analysis Set, including all participants who had at least one attack satisfying mITT analysis set criteria, and also with no major protocol deviations or other non-compliance that could impact the key efficacy assessment. For participants in the PP Analysis Set, only such attacks satisfying the above criteria were included in the analyses performed on the PP Analysis Set. The PP Analysis Set was a secondary analysis set for analysis of the primary and key secondary efficacy endpoints. A list of participants with major protocol deviations or other non-compliance leading to exclusion from the PP Analysis Set was finalized prior to unblinding the randomized treatment assignments.

Primary: Change of the VAS-3 Score from pre-treatment to 4 hours post-treatment

End point title	Change of the VAS-3 Score from pre-treatment to 4 hours post-treatment
-----------------	--

End point description:

The primary endpoint of the study was the change of the VAS-3 (3-symptom composite visual analogue scale) score from pre-treatment to 4 hours post-treatment. The VAS-3 was calculated as the mean of the VAS scores of the 3 major HAE symptoms: skin swelling, skin pain, and abdominal pain. The VAS scores of the 3 major HAE symptoms (skin swelling, skin pain, and abdominal pain) could range between 0 (No swelling/No pain) and 100 (Extreme swelling/Excruciating pain).

End point type	Primary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 April 2021	<ul style="list-style-type: none">• The sample size was increased to 72 participants, and the number of participating countries and sites were increased.• Added further specification for the randomization process with stratification for willingness to participate in full PK sampling in Part I (non-attack) of the study (Yes/No).• The criteria for study drug intake and number of capsules to be taken in Part II of the study were clarified.• Added text regarding the handling of HAE attacks that occurred prior to the Part I (non-attack) for clarification.• In addition to metabolite M2-D, other metabolites could be analysed.• The time points for coagulation testing were clarified.• The duration of home treatment (Part II) was clarified.• The risk of airway involvement in case of laryngeal and pharyngeal attacks was specified.• The Schedule of Events was modified to distinguish between the study activities at the on-site screening visit and the remote screening visit.• Time periods were linked to groups of prohibited concomitant medications.• Updated SAE reporting procedures.• Minor errors, inconsistencies and unclarities were corrected.
25 April 2022	<ul style="list-style-type: none">• Added brief results from the most recent non-clinical and clinical studies.• Modified the secondary efficacy endpoints and updated the statistical methods.• Changed the AE causality text per a request by a regulatory authority.• Incorporated changes from Amendment 6 (France only).• Waived the end-of-study visit if participants continued in another clinical study with PHA 022121 conducted by the Sponsor.• Extended the duration of participation and overall study if some participants needed longer than 24 weeks to complete assessments for 3 qualifying HAE attacks.• Allowed inclusion of participants with positive hepatitis B serology if they had normal liver function tests and no signs of active liver disease.• Allowed bilirubin elevation at screening if elevation was due to Gilbert's syndrome.• Removed the prohibition on concomitant medications that are metabolized by CYP3A4.• Defined clinically significant as it pertained to abnormal findings from safety assessments.• Indicated that Part II was subject to the same stopping rules as Part I (non-attack).• Clarified the use of the ePRO device for recording HAE attacks.• Added a new section for "Study Analyses" describing the plan for conducting a Primary Analysis and a Final Analysis of the study data.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Primary analysis is presented. Nominal P-values are listed for 10 mg dose for the primary and key secondary endpoints as tests for 10 mg dose weren't multiplicity controlled. P-values of other secondary endpoints are nominal for all doses.

Notes:
