

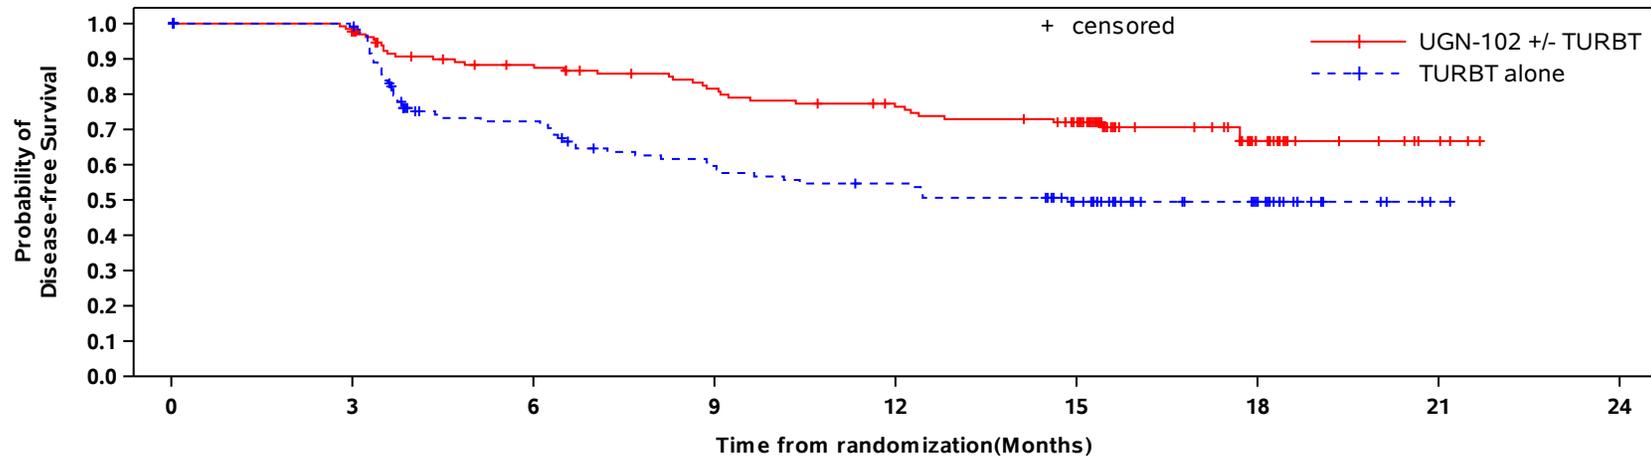

Figure 14.2.1.1a  
Kaplan-Meier Plot of Disease-free Survival  
ITT Analysis Set

Number at risk		0	3	6	9	12	15	18	21	24
UGN-102 +/- TURBT	142	128	108	96	87	73	21	4	0	
TURBT alone	140	119	76	60	54	42	19	1	0	
Number Censored		0	3	6	9	12	15	18	21	24
UGN-102 +/- TURBT	0	11	19	23	26	35	84	101	105	
TURBT alone	0	20	32	35	36	43	66	84	85	

TURBT = Transurethral Resection of Bladder Tumor.

Disease-free survival (DFS) is defined as the time from randomization until the earliest date of any of the following events:

- Failure to be rendered free of local disease at the 3-Month assessment in the TURBT Alone group.
- Recurrence of low-grade disease after the 3-Month assessment (i.e., during the follow-up period).
- Progression to high-grade disease
- Death due to any cause.

DFS in months is calculated as (first event date or censored date - date of randomization + 1) / 30.4375.
